Where even the branches themselves have been killed, or show severe injury, cut the trees back moderately. It is a safe rule to prune trees severely winter injured in wood lightly, but to prune slightly winter injured trees heavily. This applies to all fruits. A liberal application of nitrate of soda, or its equivalent, will stimulate these trees to outgrow the damage.

Some fruit growers are disappointed this year in the bloom apples. Buds that looked like buds in the winter turn out to only leaves. Then again, many buds are producing abortive soms, some of which never exp These were winter injured. The tils of most of these situated soms are black and cannot set. Others have a green center; some these may grow, but they will pand later than the normal unin ed blossoms.

Baldwin and Stayman seem have the most winter injured buds in the State College orcha but hardly any variety escaped w out some loss. The set of buds most well cared for orchards is large, however, that even with sixty to seventy per cent injury good crop may result, provided ditions during the blossoming are favorable.

This year has again shown the vantage of an orchard site elev above the surrounding cou

It Is Wise Economy to Choose the Oakland

In buying an Oakland Six your first economy is in its low purchase price. And you will find this to be wise economy. You can see for yourself what generous value you get for your money. Next you economize on upkeep costs. Any Oakland owner will tell you how thrifty his car is with gas and oil—how easy on tires. You economize further through the long life of the car resulting from Oakland's correct design and advanced engineering. Confirm these facts—drive an Oakland yourself. Your Oakland dealer will let you make any tests you like. He extends to you an unqualified invitation. Remember, too, that the General Motors Time Payment Plan will save you money.

CARBOLA
The Disinfecting White Paint

Lice, Mites and Disease Germs Can't Stand It

In Stables

In Poultry Houses

In Hog Pens

Insures More Milk

Carbola is live stock insurance against tuberculosis, foot-and-mouth and other destructive diseases. Carbola will give you thorough sanitation, increase milk production, and lower the bacteria. A year's supply of Carbola pays for itself in no time.

More Poultry Profits

Apply Carbola to the walls, ceilings, cracks and crevices of your poultry houses. Dust the dry power—just as it comes in the package—on the dropping boards, in the litter, in the nests, on the floor and on the birds themselves. Result—more light, thorough sanitation, healthier fowls, more eggs—and no lice or mites.

Paints and Disinfects

Just mix Carbola with water and you have a liquid disinfectant that dries pure white. There is no waiting or straining. It will not flake or peel off. And it is economical—one pound covers about one hundred square feet.

Give Carbola a trial. Satisfaction guaranteed. Your dealer has Carbola or can get it for you. If not, order direct.

Treatment for Eversion

What causes my year-old Ancona hens to expel their egg bags? I have lost ten or more hens in the last month from the same ailment. I am feeding a laying mash consisting of 100 pounds corn, oats, wheat bran shorts and beef scraps mixed with three pounds of salt, also oats and buckwheat in morning and whole shelled corn at night. These hens started laying at five months and have laid all winter. Are we forcing them too hard or is it a disease?—W. J. G., Lycoming County, Pa.

Pullets which are laying heavily during the spring are most subject to eversion of the oviduct. I do not think your ration is too concentrated and if the hens have plenty of green feed and a good range, the losses will probably lessen.

Isolate the Birds

Isolate the birds promptly when the oviduct protrudes. Wash them with warm soapy water. Place a little vaselene on the parts and return them carefully. Use soft feed until the bird recovers. A tablespoonful of olive oil is helpful to prevent straining and a second occurrence of the trouble. If the oviduct will not stay in place the bird should be killed as the parts soon become badly inflamed.

This trouble is due to the strain of laying and is not a disease. It is one of the troubles that helps in making up the normal loss in a flock of heavy laying pullets and may occasionally occur in the best managed flocks.—R. G. K.

Marketing Hints

SOME housewives insist that brown eggs are richer, since the yolk is darker; while some claim that the dark yolk is a sign that the egg is not fresh or vice versa. In New York City, white eggs are in demand and the housewives will pay a premium for them. In Boston the preference is for brown eggs and th white eggs are cheaper. Philadel has no special preference as to col As a matter of fact careful chemi tests have shown that there is difference in flavor between wh and brown eggs, provided that h have been produced under sim conditions and marketed careful

Food Affects Color of Yolk

The color of the yolk is no ind tion of the age of the egg. The which the hen eats affects both color and flavor. When hens h eaten heavily of grass or other g food the yolk will be yellower darker.

The white or albumin conta considerable portion of the pro and in addition to this, a large centage of the water. As the becomes older, some of the w evaporates, leaving an air cell. size of this cell, therefore, is the indication of the age of an egg.

When an egg is laid it is co with a gelatinous coating which the pores and helps prevent water in the albumen from evap ing. If the egg is washed this ing is removed and not only does water evaporate, but odors are more readily absorbed, thus aff the flavor.

Keep Eggs Away from Odor

Practically all the fat of the is contained in the yolk and for reason foreign odors are first n in the yolk, since the fat absorbs odors that reach it. Keep eggs cool place, where odors will reach them. Heat not only h evaporation but also stimulates growth of any bacteria which be present and results in the going bad.

Last year it took close to two lion cases or sixty million doz eggs to feed Philadelphia. These come from many parts of the try. Illinois, Missouri, Pennsyl Maryland and New Jersey among the heaviest shippers.—W Whitacre.

When Spring Comes 'Roun

BROILERS for fattening should be put in special fattening crates or at least confined in a room or brooder house. Better results will be obtained with not over fifty in a flock. A good fattening ration consists of twenty pounds of corn meal, ten pounds flour middlings, ten pounds ground oats and eighty pounds of sour or buttermilk. Confine the birds in crates or close quarters without feed for twenty-four hours before they get their first feed.

Mix the mash and let it stand twenty-four hours to sour. Feed twice a day in troughs, all they will clean up in thirty minutes. No water should be necessary. Market in ten days to two weeks.

Weight at Which to Sell

Under ordinary conditions Barred Rock broilers should be sold at one and one-half to two and one-half pounds. If the price is stationary, keep Barred Rocks to the heavier weight, but if it is dropping rapidly, the broilers had better go to market a little under two pounds. A one- and one-half pound broiler at fifty cents a pound makes considerably more money for its owner than does a two-pound broiler at thirty-five cents a pound. Judgment in predicting market prices must answer question.

Milk is very essential for sta baby chicks. Various experi have been made in which mil been replaced with other for protein, but for farm use mi certainly the surest protein to When chicks are at least six w old a little tankage can safe added to the mash and at the a ten to twelve weeks tankage c substituted entirely for milk if is a special reason for so d Where milk is available in a dance it is usually advisable to tinue its use all summer, parti ly for growing pullets.

Get Rid of Old Male Birds

Under ordinary farm conditio seldom pays to keep over male b Usually the cockerels being r will make just as good breede will the old birds. Not only will bills be saved but better summer will be produced if all the old are sold off. Where a poultry r has exceptionally good males w fit in with a special breeding p which are materially better tha cockerels being raised it will no to sell. An exceptional male s be kept as long as he will giv sults.—L. L. Jones.

Handling of Wool Deserves Careful Consideration

THE handling of the wool crop does not receive the careful consideration on many farms that it deserves; it is looked upon as a sideline of livestock production and consequently the price received is often reduced because of improper handling. The quality of the wool produced on the farm depends upon a number of factors, but the first and one of the most important is the feeding of the sheep while the wool crop is growing.

In order to produce a fleece of good quality the flock must be well fed during the winter months. The roughage should consist of good legume hay and silage if it can be obtained. When grain is fed it should be well balanced to produce a fleece of quality and a strong staple. The flock of sheep that must depend upon the pile of straw in the barnyard or upon the stubble or pasture field, or timothy hay, for roughage will shear a light fleece of poor quality which is usually filled with chaff and burrs. This materially reduces its sale alue.

It is too late in the season to make ny change in this respect this year s the shearing must be done before arm weather sets in. It is possible, owever, to handle the fleece prop-ly so as to present it for market n the best possible condition.

The shearing should be done on a arn floor or some place where the eece can be kept clean. After the eece has been removed, it should be read on the floor with the newly ut side on the floor. It should then examined for tags of dirt or manre and these removed. The fleece hould then be rolled into a compact ndle with the flesh side out. This ives the fleece a better appearance. a wool tying box is available it is t in the box and tied. If such an plement cannot be had the fleece tied into a compact bundle.

The Twine to Use

The twine used for tying the [illegible] be the standard paper ool twine. Binder twine should ever be used, and yet the use of this wine is one of the mistakes that is mmonly made. The wool twine can secured at most hardware stores, t if they do not carry it they will cure it for you or you can usually t it thru the county agent or the al wool association if there is such organization in the community. e wool should then be packed in cks or stored in some room where can be kept clean.

In many localities the problem of selling the wool has been solved thru the wool pools which are usually organized thru the effort of the county agent. The marketing of the wool by this method has only been practiced for a few years in Pennsylvania. Prior to the World War practically all the wool in the East was sold to local dealers who paid a lump sum per pound for the entire fleece instead of purchasing on a grade basis.

Selling Thru the Wool Pools

During the past few years much of the wool in the eastern territory has been graded and pooled and has sold for more per pound than when sold without grading. Last year there were twenty-eight wool pools in operation in Pennsylvania receiving wool from thirty-one counties. These pools handled a total of 418,000 pounds of wool all of which were graded and sold on the basis of grade. It is estimated that these pools were operated on a basis that meant a saving of seven cents per pound to all the members of the association. On this basis the increased returns because of grading and pooling the wool for the twenty-eight associations amounted to $29,260 more than the amount that would have been realized had the wool been sold to a local dealer.

More Than Financial Gain

The advantage of selling thru the pool is not alone increased financial returns, but the better understanding of wool values, better care of the flock during the winter, and a realization of the importance of good blood in sheep production. In many sections where wool pools have been established there has been a marked increase in the number of purebred rams that have been purchased.

Any farmer who has an opportunity to market his wool thru a local pool should take advantage of such an opportunity and secure the better price per pound for the wool.—W. H. Tomhave.

Studies Agricultural Prices of Past Century

HOW much did your grandfather get for eggs? What did he pay for galluses? If you have any old diaries or records or know of any which show prices received by farmers for their products or prices paid for articles purchased by farmers during the past hundred years, communicate with Charles F. Sarle of the Department of Agriculture, Washington, D. C.

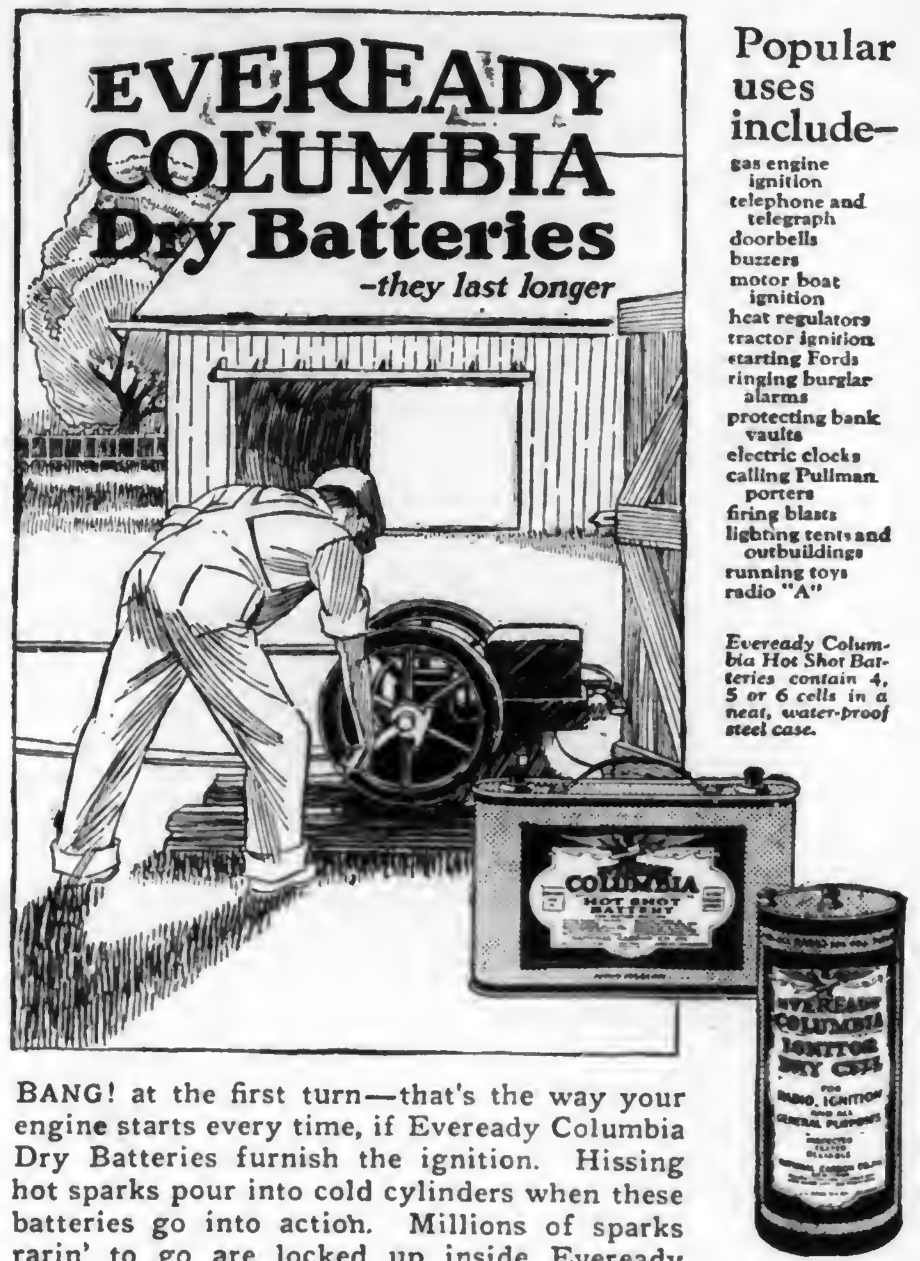
Mr. Sarle is making a statistical study of prices on all farm products and of things that farmers buy, to develop index numbers and charts on the long time trend of prices. This historical series of prices will be used in various ways by the department in connection with forecasts of what prices will be in the future.

Records of this character, says Mr. Sarle, are usually available from files of country newspapers, farm magazines, accounts of mercantile transactions of country merchants, grain and livestock buyers, and private accounts of farm sales and purchases.

He risked his life to rescue the fair maid from a watery grave, and, of course, her father was duly grateful.

"Young man," he said, "I can never thank you sufficiently for your heroic act. You incurred an awful risk in saving my only daughter."

"None whatever," replied the amateur life saver: "I'm already married."



One spin means "Go"!

EVEREADY COLUMBIA Dry Batteries
-they last longer

Popular uses include—
gas engine ignition
telephone and telegraph
doorbells
buzzers
motor boat ignition
heat regulators
tractor ignition
starting Fords
ringing burglar alarms
protecting bank vaults
electric clocks
calling Pullman porters
firing blasts
lighting tents and outbuildings
running toys
radio "A"

Eveready Columbia Hot Shot Batteries contain 4, 5 or 6 cells in a neat, water-proof steel case.

BANG! at the first turn—that's the way your engine starts every time, if Eveready Columbia Dry Batteries furnish the ignition. Hissing hot sparks pour into cold cylinders when these batteries go into action. Millions of sparks rarin' to go are locked up inside Eveready Columbia Dry Batteries.

For radio—use the powerful, long-lasting Eveready Columbia Ignitor, 1½ volts. Operates all dry-cell tubes during long hours of happy listening; adopted by radio engineers as the standard radio dry cell.

Fahnestock spring clip binding posts on the Ignitor at no extra cost to you.

As a Practical Dairyman —how do *you* think a Milker should operate?

IF you were going to design a milker, the very first thing you would do would be to get the action *just like nature's action*—because you know that nature's way is the most productive way. You would take a *sucking calf* as your model—because the calf is the natural-born milker.

That is exactly what Empire did—and that is why the Empire is different from all other milkers. When a calf swallows after each suck, he massages the teat completely from tip to udder. *So does the Empire*—and no other milker does it or can do it, because the Empire teat cup is patented and exclusive.

That is why cows milked with the Empire give down more milk and give milk longer. That explains why farmers everywhere are making bigger profits out of milk today than they ever thought possible.

And now the new Empire Electric Milker makes machine-milking profitable for every man who has six cows or more.

Let the Empire agent in your locality take you to a nearby Empire-equipped farm and see the Empire in operation. Write us today for the Empire catalog No. 33 free.

Empire Advantages

1. Teat cup lining is hand made and has linen inserts. Basic Empire patents cover these teat cups—they give the only complete three-sided massage, duplicating the calf's suck.
2. Standard Empire Milker Units used with Empire Electric or Engine type Pumping Outfits provide a practical size for *every* dairy of 6 or more cows.
3. Single or double units to meet your requirements.
4. Durable rubber parts that stand boiling.
5. Single pipe line with no complicated or moving parts to wear and get out of order. Clean. Costs less.
6. The Simple Pulsator guaranteed 4 years against wear. Only one Pulsator needed for single or double unit.
7. Low power cost—¼ H.P. outfit milks 2 cows at once—larger sizes proportionately economical.
8. Sanitary claw with automatic shut off and without moving parts to wear and get out of adjustment.

A size for every Dairy EMPIRE TRADE-MARK REG'D. Milking Machines for any kind of Power

Swiss Weather Prophet

A Weather Warning That is Dependable

The Swiss Weather Prophet is made of hardwood. The house is decorated in front with a stag's head, a bird, glass windows and a thermometer between the doors. On the green covered roof is a starling's cage. The inner background is decorated with views of Switzerland. There are two doorways. When the carved figures of the two children come out, look for fair weather; when the little old witch comes out, rain or snow with stormy weather is sure to come.

Scientific and Accurate

This instrument is made on scientific principles. The figures which prophesy the weather are suspended on a platform, with a piece of catgut. This catgut is sensitive to the least change of atmosphere and is so adjusted that the figure of the witch comes out in advance of rain and the figures of Hansel and Gretel for fine weather. This Weather House will be sent prepaid for two yearly subscriptions at $1.00 each or with your own renewal and 50 cents extra. Reward No. 126.

DAIRY

A. A. BORLAND,
Staff Contributor and Adviser
Head of the Department of Dairy Husbandry, Pennsylvania State College

Let the Cows Help Solve Your Feeding Problems

I am feeding three cows, two Holsteins and one Shorthorn, and get only about thirty quarts of milk daily. The cows are fresh, the calves having been sold several weeks ago. They only averaged about 130 pounds each when five weeks old.

I have been feeding each one six pounds daily of the following grain mixture:

	Per cwt.
200 lbs. corn and cob meal	$2.25
100 lbs. ground oats....	2.50
100 lbs. bran..........	2.00
200 lbs. gluten.........	2.20
200 lbs. oil meal.......	2.75
8 lbs. salt	

Would it be profitable to feed some dried beet pulp at $2.25 per cwt., same being soaked in water, or would it pay better to soak it in molasses water; molasses costs twenty-two cents per gallon?

How much protein and carbohydrates does the ration I am feeding contain?

Could I improve the ration by adding some other grain to make more variety? Cottonseed meal, for instance, at $2.75 per cwt. The cows get all the hay they want three times daily, it is mostly timothy.—F. B., Bucks County, Pa.

The mixture which you are feeding analyzes about 20 per cent crude protein, 8 per cent crude fiber, 50 per cent nitrogen free extract, and 4.9 per cent fat, according to the average analysis figures for the different ingredients given in Henry's Feeds and Feeding. With the roughage which you are feeding your dairy cows, mostly timothy hay, this mixture runs too low in protein to get the best results in milk production.

It would be profitable for you to sell your corn and invest the money in cottonseed meal. Then make up the grain mixture as follows: 100 lbs. ground oats; 100 lbs. wheat bran; 100 lbs. gluten feed; 200 lbs. linseed oil meal; and 200 lbs. 43 per cent cottonseed meal.

Need More Protein

I doubt if it would be profitable to soak beet pulp in molasses, when molasses is selling for twenty-two cents a gallon. Molasses contains but very little protein. Your need is additional protein when your roughage is timothy hay. The same can largely be said of dried beet pulp, which contains very little prote and is largely a carbohydrate fee The only advantage it would hav would be to give some succulence t your ration, since you have no silag

I think the best plan will be f you to ask your cows the questio directly as to whether they will gi you sufficient additional milk t make it worth while feeding dri beet pulp. In other words, try it o on them and watch the results. G a hundred pounds of dried beet pul and run a little experiment wi your own cows. Weigh the milk f four or five days before you begi feeding the beet pulp and for fo or five days after you start feeding i See whether the cows start prod ing enough milk to pay for the pul

How to Feed

The feeding may be done as f lows: Weigh out two to three pou of dried beet pulp per cow in th morning. Soak it in water un evening, and then mix the grain f with the moistened beet pulp, a feed the mixture. In the eveni weigh out two or three pounds dried beet pulp per cow and soak in water until the next mornin Then mix the grain allowance f each cow with the moistened b pulp in the same way that it w done the preceding evening. Ke this up, as I have mentioned, f four or five days, meanwhile weig ing the milk from each cow to d determine whether the addition milk will pay for the dried beet pu consumed.

Molasses Is an Appetizer

Molasses has its chief value as appetizer for cows that are out condition. If one is feeding molass it can be fed most readily by diluti it with an equal amount of wat and sprinkling it over the rougha It is a heavy substance, weighi about twelve pounds to the gall The actual nutritive value of m lasses is somewhat lower than corn, pound for pound, and unl one has some unpalatable rougha and its use will induce the cows eat the roughage with less wa it is doubtful whether it would to feed the molasses, unless it can produced at less cost than pound for pound.—A. A. B.

Condensed and Evaporated

WHAT is the difference between condensed and evaporated milk?

Briefly, both products are prepared by evaporation of a part of the water from the milk, which concentrates the solids of the milk. Both products are really condensed, but the one which the trade calls condensed milk is preserved by adding sugar to the milk before evaporation, while the term evaporated milk is applied to the product made by evaporating part of the water and preserving by heating after it is in the final container.

In making the condensed or sweetened milk cane sugar is added to the fresh milk in the proportion of sixteen to eighteen pounds of sugar to each 100 pounds of milk. The federal requirements under the food and drugs act for sweetened condensed milk are that it have not less than twenty-eight per cent of milk solids and not less than eight per cent of milk fat. The finished pr uct contains between forty and f ty-five per cent of cane sugar, whi is sufficient to prevent the grow of all ordinary microorganisms.

Over 100 Pounds of Milk to the C

It requires 105 pounds of milk a 16.8 pounds of sugar to make o case of standard condensed milk co taining forty-eight fourteen-ou cans.

The process of making evaporat milk differs from that of maki condensed milk in that no sugar added. The milk is preserved sterilizing it in the cans by heati in a steam chamber. To make o case of evaporated milk containi forty-eight sixteen-ounce cans r quires approximately the sam amount of milk as for a case of co densed. The federal standard f evaporated milk requires not l than 7.8 per cent fat.—U. S. D. A.

Pinchot Has the Last Word

The Legislature Did Its Bit for T. B. Eradication

ORGANIZED farmers showing a united front, convinced the state Legislature it was good economy to appropriate more than $3,000,000 to help stamp out tuberculosis in cattle. Haines Bill No. 895 providing for the appropriation of $3,000,000, is now on the Governor's desk waiting for his action. It would seem reasonable to believe that the arguments farmers used to convince the Legislature would now be sufficient to convince the Governor he should sign this bill.

Whether the Governor signs this bill or not, farmers should know and appreciate the hard work done for them by their leaders. While Morris T. Phillips, president of the State Council of Farmers' Organizations, was busy lining up a "solid front" of organized farmers, Assemblyman W. A. Haines, of Bristol, Pa., chairman of the Committee on Agriculture, was active convincing all the members of the House and Senate, especially the members of the Appropriation Committee of both bodies, to support his bill. It is everywhere admitted that without the influence of Assemblyman Haines this bill could not have been passed at this session.

The Other Bills Passed

Besides Bill No. 895, Assemblyman Haines was successful in having two other bills passed. His bill, No. 994, which is already signed by the Governor, made immediately available $250,000 to pay back indemnities for cattle slaughtered during the last two years on account of tuberculosis. His bill, No. 1584, provides for subdividing of the dog license fund, estimated at $1,500,000 to be used as follows: $750,000 for maintenance of the Bureau of Animal Industry, to be used for enforcing various laws controlling and eradicating infectious diseases of livestock; $450,000 for enforcing the dog law and paying for damages to livestock done by dogs running at large. This leaves a balance, estimated at $300,000 for indemnity, in addition to the $3,000,000 provided in Bill No. 895. The aggregate amount of appropriations provided for work in which farmers are particularly interested is four and three quarter million dollars.

Must Clean up Herds

Figures show conclusively that a few millions spent now will save many millions later. Tuberculosis is a disease that spreads rapidly from one animal to another after it once enters the flock or herd.

Baltimore has already passed legislation giving dairy farmers until January, 1926, to clean up their herds. Other cities in various parts of the country are doing the same. Sooner or later Philadelphia, Pittsburg and other large cities which have not yet passed such legislation, will become the dumping ground for milk unfit for sale in these markets. This condition will force many dairy farmers, with untested herds, out of business, unless they clean up their herds.

If you have any influence with the Governor, use it.—Wilmer A. Twining, President, Bucks County Holstein Association.

The Brentwood National Sale

A TWO-YEAR-OLD bull, Sir Inca May, topped the Fourth Brentwood National Sale held at Abington, near Philadelphia, April 30 and May 1, at $12,000. This animal was junior champion at the 1924 National Dairy Show and is a son of the United States champion butter producer. The price paid for him is the highest yet paid for any animal at a Brentwood Sale. He was consigned by the Minnesota Holstein Company, Austin, Minn., and purchased by Carnation Milk Farms, Seattle, Washington.

About 125 Holsteins were sold during the two days of the sale at an average price of approximately $730. The sale was preceded on April 29 by a show. The prize of $400 in cash for the best female, all ages, was won by Hazelwood Bessie Pauline Heil, entered by John L. Smith, of Spokane, Washington, and later bought by W. G. Davidson of Brentwood Farm.

The second highest price of the sale was $7000, paid by R. Hathaway, of Dedham, Mass., for Grahamholm Sir Colantha, son of a twice 33,000 pound cow, consigned by Grahamholm Farm, Rochester, Minnesota.

Bell Farm Hattie Brings $4000

The third highest price, $4000, was paid by the Detroit Creamery Company, of Mt. Clemens, Mich., for Bell Farm Hattie, a cow who made a 1000-pound record as a two-year-old.

Carnation Milk Farms, of Seattle, paid $3600 for Sir Prilly Colantha Dairy Maid, a young bull consigned by the Bridgford Holstein Company, Patterson, California.

J. F. Burkheimer, of Homer, Mich., paid $2500 for O. K. L. Dorinda, the 19th, 1000-pound daughter of Ormsby Colantha Lad. She was consigned by Julius Schmid, of Montgomery, New York.

Well known consigners from eastern states were: Bell Farm, Coraopolis, Pa.; Brentwood Farm, Abington, Pa.; A. S. Deysher, Reading, Pa.; John M. Dennis & Son; Riderwood, Md.; Hotchkiss-Heidler Stock Farm, Fairview, Pa.; Java Farms, Edgewater, Md.; Jas. A. Reynolds, Cleveland, Ohio; Norris J. Reynolds, Rising Sun, Md.; W. D. Robens, Poland, N. Y.; Springfield State Hospital, Sykesville, Md.

Some Eastern Buyers

Buyers from eastern states included: H. S. Firestone, Akron, Ohio; Harrington & Company, Dushore, Pa.; Craola Farms, Sewickley, Pa.; C. H. Cook, Trenton, N. J.; T. Riley, Hallowell, Pa.; E. Stapler & Son, Yardley, Pa.; J. H. Bennetch, Sheridan, Pa.; Miller Brothers, Ithaca, N. Y.; W. G. Davidson, Brentwood Farm, Abington, Pa.; Arthur L. Hoffman, Elmira, N. Y.; Clark & Graham, Kenton, Delaware; B. H. Meyer, Finderne, N.J.; Olcott Farms, Big Flats, N. Y.; Chester Heisel, Chalfont, Pa.; Mart Stoltzfus, Morgantown, Pa.; A. H. Clemens, Doylestown, Pa.; Dr. J. T. Kelley, Jr., Washington, D. C.; S. W. Barber, Scottsburg, N. Y.; Paul Smith, Newark Valley, N. Y.; M. S. Gillispie, Edinboro, Pa.; John H. Winslow, Vineland, N. J.; Kendree Walker, Gaithersburg, Md.; W. A. Woods, Carlisle, Pa.; Harry Yates, Asbury Park, N. J.; Dr. Henry Skinner, Narberth, Pa.; Mrs. Alfred E. Darnell, Medford, N. J.; Dr. E. Hogg, Wilkes-Barre, Pa.

Besides buyers from all parts of the United States, there were men from Boliva, South America, and Cuba. A number of animals went to these two countries.—W.

Our Young People's Forum

Cousin Ruth's Letter

Dear Forum Friends:—My heartiest congratulations to all those who entered the contest and very special congratulations to the prize winners. You boys and girls certainly did write some interesting letters about your bird friends. I just can't tell you how pleased I am with the way you responded to my announcement of the contest. I'm sorry that some who wrote splendid letters and might have gotten a prize forgot to tell me their age. Don't forget next time. There are going to be some more contests this year, I can assure you. Send in any suggestions for them that you may have. I'll be glad to hear from you.

Now for a Snapshot Contest

In the meantime how about a snapshot contest? I've been thinking that it might be fun for you to send in pictures of your playmates. That will mean the pictures of your baby brother or sister, your chum, your pets or any of the animals that you have good times with on the farm. What do do you think about it? There will be a prize for each one of the three best pictures entitled: "My Playmate." The winner of the first may have his or her choice of a camera or a necklace, the second will receive a fountain pen and the third a flashlight. Now, let's see who can find a nicer playmate than this one of mine, Billy Boy. Billy is one of my nearest neighbors and he's also the youngest Forum member.

To have your picture entered in the contest send it to me before May 30. On the back of each picture please write your full name, address, and age. It would be nice if you would enclose with your snapshot a short letter telling a little about your playmate. I think Forum folk would like to know more about your playmate than the picture will tell, don't you? Address all contest pictures to Cousin Ruth, Pennsylvania Farmer, 261 South Third St., Philadelphia. Now for a real picture page. All join the fun.

COUSIN RUTH

My Bird Friends

First Prize

Right outside our kitchen window a pair of robins are building in a lilac bush. They built in the same place last year but a cat or some other animal destroyed the nest and all the eggs. We also have a pair of pheasants around here and every morning when I wake up I hear the cock pheasant crowing.

Last winter we had a feeding station in our back yard where we put grain and suet for the birds. Song sparrows, snow birds, woodpeckers and nut hatches came mostly and whole droves of English sparrows.

I saw a pair of bob whites about a week ago, the first I have seen this season. We have put up several wren boxes and we hope the wrens will build in them when they come. There are one or two pairs of turtle doves around here but we do not see as much of them as the other birds. We saw one hunting for material for a nest and it seemed to be very careful in choosing sticks. It would look at every stick to see whether it was right on all sides before it would take it.

Last year there was an oriole's nest just outside my window but the orioles deserted it before the eggs were hatched. I do not know why. I was very sorry to have them go away. I love birds and like to watch them build their nests and feed their young. I am interested in seeing how the robin shapes the nest with her wings, turning round and round to make it perfectly bowl-like. The oriole used her beak all the time for shaping and weaving her beautiful swinging basket.—Margaret H. DeWees, Chester County, Pa.

Second Prize

We all love the birds and are always glad to see them coming back from the south in the springtime.

We have three little houses for the wrens to build in. They are here now and oh, how he does sing in the mornings. One house is on a post by a red rambler bush and one day we heard them making an awful noise and we soon found out the trouble. There was a snake in the house. We called daddy and he came and got the snake out and killed it. It was a house snake.

We have a robin's nest in a pine tree by the front porch and Mr. Robin sits on a post just in front of the window and fixes his feathers all up and chirps every morning. We also have a little chippy bird we call it, building a nest in one of our white rambler rosebushes. It is such a dainty little nest.

The cat birds always build in one of our quince trees. They can imitate a mocking bird pretty good when they sing. There is a little chipping sparrow or ground bird that always builds its nest in some bushes in the garden.

The red birds stay around our house all winter but we never found their nest. My uncles live right close to us and there is a pear tree by one window. Mr. Red Bird stays in that tree a good part of the day and he will fly at the window and peck at it and if the window is raised he will sit on the sill and look in.

I hear the orioles singing these mornings but have not found their nest yet. We feed the birds in the winter and sometimess we have several different kinds. Sometimes there would be as many as fourteen red birds at one time. We have the phoebe, wild canaries, bluebirds, chimney swallows and several others but we do not know their names.

We have so many rose bushes and different flowers in our yard and all kinds of fruit trees that there seems to be a great many birds staying around us and we are glad to see and hear them sing. We do love the birds.—Naomi M. Johnston, Washington County, Pa.

Honorable Mention

I live on a farm in York County and of course I have many bird friends. The most popular birds around my home are the robins, bluebirds, wrens and sparrows.

When my mother comes from feeding the chicks she hangs the bucket with the chick feed on one of the posts on the porch. It was not long until me missed some of our feed and we decided to watch what was taking it. It was not long till a wren and his mate came and perched themselves on the edge of the bucket. While one watched for enemies, the other would jump down in the bucket and eat some of the feed. They would take turns at watching, and would also carry some home to the three little wrens in a large apple tree not far away.

We live in a stone house and every year a family of wrens build their nest in the wall at the back of the house where they live a very contented life.

A large apple tree and two cherry trees near my home contain many busy families in the spring. They are mostly inhabited by robins. Sometimes they quarrel and become very boisterous and noisy. Then one family will have to move out and the rest will live happy.

Last week I went to meet the mail man and he not being at the mail box, I walked to a small woods not far away to wait for him.

I heard a noise in the dead leaves and upon looking a little ways ahead I saw a dark feathered bird which I took to be a brown thrush. He did not sing any and whenever I moved or made a little noise, it was alert and looking for enemies. I watched it about ten minutes and noticed it hovered about one spot nearly all the time.

Just then the mail man came and I could watch it no more. But I believe its mate was keeping some eggs heated somewhere near and that's the reason it was so quiet and stayed at one place.

As I write I can hear birds singing nearly everywhere even tho it is a cloudy morning they sing just the same as if it was bright. All birds are my friends and I like nothing better than to walk deep in the woods on a sunny afternoon and watch how busy they are and listen to their songs.—Dorcas I. Stitely, York County, Pa.

Honorable Mention

Out in the old apple tree lives my favorite bird friend, who is the bob white. He wakes me up in the morning by continually calling his name. He wears a very beautiful dress of brown and white which he shows very plainly when he flutters in an out from the big apple tree.

Now I will tell of the three cousins: the catbird, the mocking bird, and brown thrasher. Their breasts are closely related to each other in color. All three cousins sing nearly the same, and, of course, as the catbird gives his unattractive mewing call in the orange blossom tree in our yard, the mocking bird repeats from the old cherry tree out by the roadside.

Our last summer's humming bird hasn't returned to our flower garden yet. He likes to extract the honey which he is so fond of from the flowers in our garden and he does not leave the garden until cold weather.

Down by the stream lives the beautiful cedar waxwing and kingfisher. The cedar waxwing is fond of the pretty red berries that grow by the water. It likes to take cherries from our big cherry tree but it also destroys injurious insects which are in the cherry tree. It loves cedar cherries and often rests in the evergreen tree by the front gate.

The kingfisher's name is derived from its ability in catching small fish with its long pointed beak. In the bank by the stream is the kingfisher's home. It looks something like a tunnel and in the farthest end it lays six white eggs.

We have robins and wild canaries here, too, but, perhaps, my story is already too long.—Dorothy Ann Sterbutzel, Fayette County, Pa.

Honorable Mention

I think the birds are among the best friends of the country boys and girls. One of my best friends is the robin. There is a robin's nest just across the road from our house. This evening a pair of birds (I think they were larks) came to the tree and at once Mr. Robin started to quarrel. They had a fight and soon left. The robins don't like to have close neighbors.

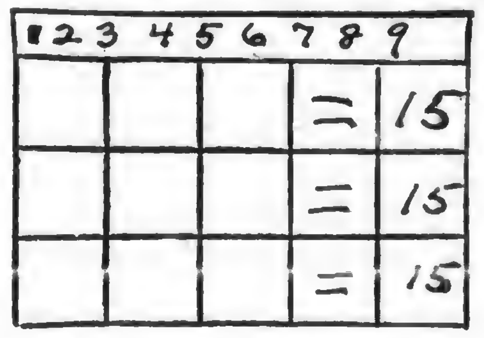
OUR LITTLE FOLKS' PUZZLE CORNER



Dear Little Folks:—The Puzzle this week is to place the figures you see on the top row of the picture (1, 2, 3, 4, 5, 6, 7, 8, 9) in the squares below in such a way that each row, when added up crosswise, will equal 15. When you have found how to do this, send the answer to me on a **POSTAL CARD** so that it reaches me not later than May 23. **BE SURE TO SAY HOW OLD YOU ARE.** The ten children, sending in the correct answer, whose cards are the best in grammar, spelling, punctuation, penmanship and general appearance will each be awarded a prize. Address all replies to the PUZZLE EDITOR, PENNSYLVANIA FARMER, 261 SOUTH THIRD STREET, PHILADELPHIA.

Puzzle Prize Winners

The answer to the puzzle published in the April 25 issue of Pennsylvania Farmer is: THEODORE ROOSEVELT.

The prize winners are: Richard J. Bower, age 9, Fredonia, Pa.; Elvin L. Brackbill, age 11, Paradise, Pa.; Russel W. Cornbower, age 8, New Freedom, Pa.; Earl Hall, age 11, Ickesburg, Pa.; E. Helps for Home Dressmakers

Simple Kinks That Will Lighten the Family Sewing

TO CUT and make garments one at a time is a waste of both time and energy. If half a dozen pairs of bloomers and several aprons are to be made, it is best to cut them all out at one time, having shears, patterns, needles, pins, etc., ready before beginning. When cut, fold and lay away until you are ready to do the required basting. When the machine is oiled and threaded, the stitching may be done in a lump.

Sewing Machine Attachments

Every woman who has a sewing machine should learn to use all the attachments. The hemmer, ruffler and tucker are particularly helpful in doing plain sewing. The adjustments are easily learned and their use gives a neat and satisfactory finish. The ruffler is very adaptable and may be regulated from ruffles to shirt gathers. If only a few gathers are needed, like the top of a sleeve, stitch across plain and pull one thread until the right fulness is obtained.

Rather than fasten the threads at the ends of hems on sheets, towels, etc., turn and stitch back an inch or so. In sewing seams, begin an inch from the end, sew that distance and turn for regular seam. This also applies to cuff bands, pockets and shirt flaps.

Other Short Cuts

There are other short cuts that help the seamstress, such as laying the finished buttonhole on the goods and marking with a pencil in the center of it, the place where the button should be sewed. This saves the need of measuring. A piece of goods on the under side where the pocket is to be sewed on, will strengthen it. The placket of a skirt will not tear down if a hook and eye are sewed near the bottom and fastened.

In making buttonholes, if the thread should break or prove too short, put the needle thru the slit onto the wrong side and fasten. After threading the needle again, insert it in the side of the last stitch, drawing the thread up thru the last knot or purl, and proceed as before.

On heavy cloth and where shank buttons are used, the end of the slit nearest the edge is rounded, so the button will rest flatly in the buttonhole. Before making buttonholes in flimsy material, dip the material in starch and iron it.

Your Thread Won't Tangle

You will have no trouble from tangled thread if you thread the needle before breaking the thread from the spool. In sewing on pockets begin in the middle and stitch to one end, then turn and stitch back. Continue to the other end and turn for second row. This does away with ripping at the top.

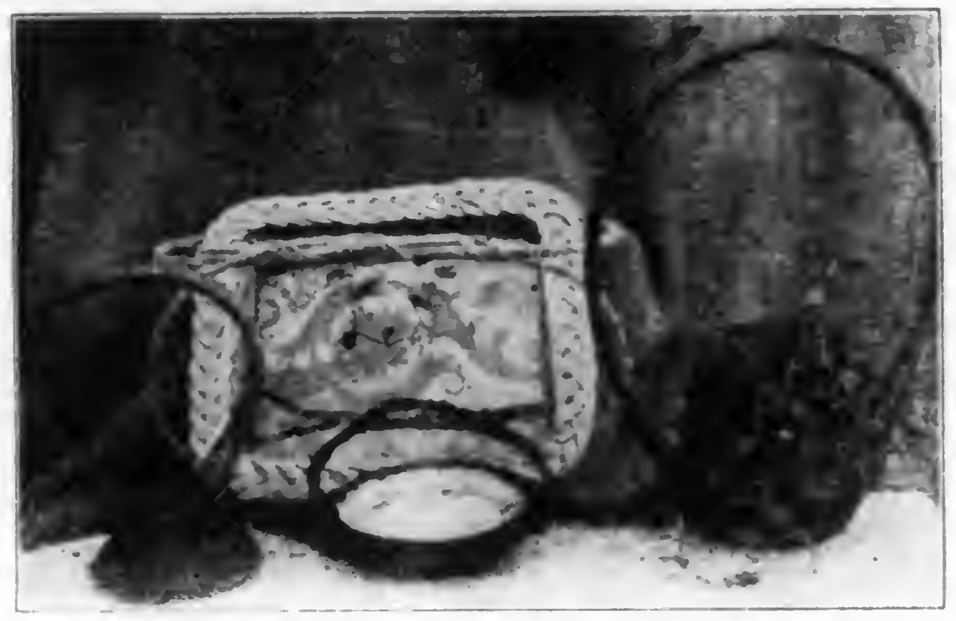
Some garments are worth making over, in fact many are. But be sure of this before you start in. The first step is to rip the garment apart, (a safety razor blade is the tool to use), clean, and press. This is an ideal time to make over, for garments are short, scant and plain, as well as consisting of two materials. However, preserve the harmony of the color design. By carefully studying the fashion plates, you can produce a garment that will pass for new.

The housekeeper, clerk and many other wearers of aprons will welcome the notebook pocket. A notebook, by reason of its weight, is quite sure to stay in the pocket, but a pencil is almost as sure to fall out when a person bends over. To remedy this, make the pocket about three-fourths of an inch larger than the note book and stitch a seam down thru the pocket at the right side, making a little slit into which the pencil will fit tightly.—Mrs. George Gray.

Weave a Tray

EVERY basketmaker sooner or later wants to try her hand at a tray. Here are directions for a very pretty one, that is not hard to make.

Materials needed: An oval wooden base with an even number of holes; filling (cretonne or wall paper); glass for covering; spokes of No. 4½ reed, as many as there are holes; ten of these are cut thirteen inches long, to be used at the ends of the tray for handles, the others are cut eleven inches long; weavers of No. 3 reed.



Every homemaker would like to own at least one serving tray.

Soak reeds as usual. Insert the spokes, pushing them about two inches thru the holes of the base. Turn the tray bottom side up, and bind off these two-inch ends as follows: Bring each spoke in front of the next at the right and back of the one beyond that, until all the spokes are locked in.

Now turn the tray right side up. Put in the filling (pasting it around the edge) and the glass. Weave one row of triple weave. (See previous lessons.) When you have gone once around, pull your three weavers to the inside of the tray and insert three more weavers in the three holes to the left of your first three weavers.

Work on the Inside

Work on the inside of the tray on the side farthest away from you. Take the weaver that is farthest at the right and bring it over the next five spokes and behind the first empty spoke to the inside. Continue around, turning the tray. Then in finishing the row, leave three weavers on the outside of the tray as you come to the empty spoke. Cut off the other three weavers. This coil covers the edge of the glass.

Now weave a row of triple weaving. When this row is completed, start your handles as you begin a second row of triple weave. The handles are made by lifting the weaving so a two-inch arch is formed (it was for this purpose that ten of the spokes were made two inches longer than the rest) and then coming down on the side again. Weave in triple weave until there are six rows on the sides, and three rows over the handles.

The Border

Soak the spokes. Take two spokes and bring them back of two, in front of two, and to the inside of the tray. Use a nut pick or an awl to open the beginning of the border for the last spokes to go thru. This makes a standing braid.

When staining a tray, have the brush quite dry when painting near the bottom, so that the stain does not run under the glass.—Hilda Hearn.

Rooting Roses

I HAVE again and again been very successful in rooting roses. I bend the rose cane over to the ground and let it loop over loosely. Have a small space well dug up, and place the cane over this "soil-prepared" place. Be sure and have the part of the cane where the leaves have started out, on the fresh dirt, as the roots will then start from the eyes where the leaf stems do.

Place a handful or two of fresh dirt over the cane and place a heavy stone over the dirt to weight it down. Transplant these rootings the next spring.

Several rootings may be made on the same branch or cane but they will not be so strong or luxuriant a growth as they would if only one was rooted on the cane.

Be sure to let the end of the cane project out from the rooting. The rooting should be done in the spring just after the canes leaf out. The rootings should be well watered at the time of rooting and occasionally afterwards, especially if the rose bushes are in sandy soil or the season is very dry.—Clarice Raymond.

Fruit for Breakfast

MANY country families look upon the idea of fruit for breakfast as a fad, or if not a fad, as too much trouble to prepare in the busy season. As a matter of fact, constipation, which is as much a country disease as a city one, can be routed by the persistent use of fruit, and it need not be expensive, either.

Years ago, before anybody thought much of fruit for breakfast, a woman whose large family loved apples always put a big pan of them in the oven while the men were doing the barn chores, and they all feasted on baked apples with rich milk that was more than half cream. Now baked apples are the popular breakfast dish in restaurants and one farmer meeting his old favorite in a dining car was amazed to find that it cost thirty cents for a small half of apple and a tiny helping of cream.

If You Want a Change

There are apples at least six months of the year on the average farm, but, of course, apples become a drag if used every day. Many people do not like prunes tho they are rich and wholesome, but there are dried apricots that make a delicious sauce when soaked over night and cooked slowly with a little sugar. Rhubarb, berries, cherries, peaches, pears, oranges and all kinds of fruit are good, and in an emergency there are canned fruits, home canned or bought in the grocery store. Nothing is better than a dish of home canned blackberries or peaches.

If they can be afforded, dates, raisins, grapefruit, figs and pineapples make a nice change. But when all is said a nice dish of warm apple sauce or a warm baked apple is the choice of most people day in and day out.—Hilda Richmond.

Editors note.—Blackberries should be omitted from the above list if the fruits are selected for their laxative properties.

Shall We Stipple?

DEAR EDITOR:—Will you please answer a few questions, or tell me of someone who can?

Would it be proper to stipple the outside of a country home of medium size? What colors would look well together? Should the under coat be the darkest?

Also can a frieze one and one-half by five feet be used on the wall of a dining room? Should the room be paneled in imitation with binder or how? I should appreciate your help very much.—Mrs. A. R. F.

Stipple work on the outside of a building must be done in stucco. For complete instructions we must refer you to a commercial concern. A stamped, self-addressed envelope will bring you the address. The sort of stipple used for outside work is quite different from the sort used on the inside of a house. Two colors cannot be used. A cream or light buff tint (using mortar color mixed with the stucco) will be best.

As for the friezes or paneling, personally I do not care for them—especially in a dining room. In my own home the walls are painted light buff, with flat oil paint; ceilings are the same. If paper is used, let it be perfectly plain.

You may, if you choose, run a wooden chair rail around the room, two and one-half feet from the floor; or else use a plate rail, about two-thirds the distance from floor to ceiling. The rail should be painted to match the other woodwork.

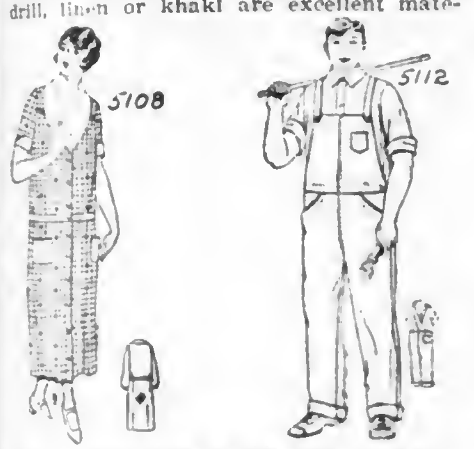
A room decorated thus is very much better taste than a more elaborate one. It serves as a background for the china, silverware, furniture, pictures, etc.; whereas an over-decorated room is very apt to clash with them.—W. D. B.

For the Whole Family

Directions for Ordering.—Give figures and letters of each pattern exactly as printed at beginning of each description. Give bust measures when ordering waist patterns, waist measure for skirt, and age for children's patterns. Address Pennsylvania Farmer, 261 S. Third Street, Philadelphia, Pa.

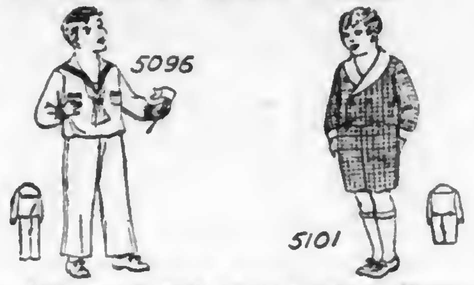
5108.—Practical for Morning.—This model may be made of rep, cambric, linen, gingham or chambray, or in jersey or flannel. The sleeves may be in wrist length, or short and finished with a shaped cuff. Seven sizes: 36, 38, 40, 42, 44, 46 and 48 inches bust measure. A 38-inch size requires 3¾ yards of 36-inch material with three-fourths yard of contrasting material if made as illustrated. If made of one material 4½ yards are required. The width of the dress at the lower edge is 1⅝ yard. Pattern, 10 cents.

5112.—Good and Serviceable.—Jean, drill, linen or khaki are excellent materials for garments of this kind. It is provided with ample pockets at the sides and a smaller one on back and front. Six sizes: 28, 30, 32, 34, 36 and 38 inches waist measure. A 34-inch size requires 3⅞ yards of 36-inch material. Pattern, 10 cents.

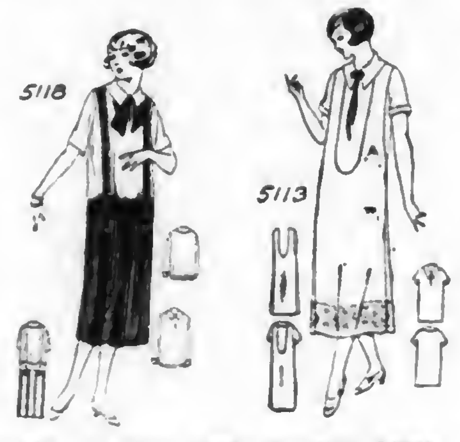


5096.—Boys Like This.—This jaunty sailor model may be made of linen, pongee, rep or flannel. Braid trimming or stitching will be a suitable finish. Three sizes: 2, 4 and 6 years. A 4-year size requires [illegible] yards of 36-inch material. Pattern, 10 cents.

5101.—For Small Boys.—Checked gingham, linen, rep and pongee are desirable materials for suits of this kind. The trousers are buttoned to the blouse on inside bands. Three sizes: 2, 4 and 6 years. A 4-year size, if made as illustrated, will require 1¾ yard of 36-inch checked material and three-eighths yard of plain material. If made of one material 2⅛ yards will be required. Pattern, 10 cents.



5118.—A Popular Style.—Satin, flannel, kasha or linen could be used for the skirt. The blouse is attractive in crepe, crepe de chine or batiste. Four sizes: 14, 16, 18 and 20 years. To make this style as illustrated for a 16-year size will require 2⅝ yards of 40-inch material for the skirt, and 2 yards of 32-inch material for the blouse. If made with long sleeves the blouse will require 2¼ yards. Pattern, 10 cents.



5113.—A Model with Youthful Lines.—This is one of the leading styles of the season—and is certainly an ideal warm weather dress. Linen, bordered with embroidery was used for the dress and blouse. Three sizes: 16, 18 and 20 years. An 18-year size requires 3¼ yards of 40-inch material for the dress, and 1¼ yard for the blouse. The width of the dress at the foot is 1⅝ yard. Pattern, 10 cents.

Send 10c in silver or stamps for our up-to-date spring and summer 1925 Book of Fashions.

A Fair Exchange

SOME time when you need a more-than-ordinary grade of glue, get the tube out of Daddy's car, the one that comes with the inner tube patches. It will be a joy to you to use it for mending that lamp chimney with its one little piece broken off, or for putting the strap back on your rubber apron, or for replacing that piece of linoleum that was kicked off. The tube patch itself will do very well to mend the rubber sole on a tennis shoe.

A Chamois for Dad

Dad may possibly be mad, but if he is, ask him why the household chamois is always disappearing. It's mighty queer to me why the auto needs a new chamois almost every week. I have decided to hang an oil-cloth in the garage for a chamois that shall be Dad's alone and for other car-cleaning apparatus. In return I shall ask him to fit me out with some of his glorified glue and a collection of tube patches for household use.

And while I am working reforms, I shall make a neat little pocket, of material that matches in color the upholstery of the car, and fasten it with push-pins below the window or door on the driver's side. That will be for the letters I want mailed, or for the memorandum pad that will remind the driver of requested errands.—K. W. H.

Let a Machine Do It

SOME months ago a physician was called to see a homemaker who had reached the verge of collapse.

"What have you been doing to put you in this condition?" was the natural question when the list of symptoms stood revealed.

"No one thing that I didn't have to."

"Are you positive about that? For one week I am going to keep you in bed, and for one week you are not to do a single thing that some other member of the family can do just as well. We'll make a list presently, and you will be surprised to find how few are the things that you alone can do. Perhaps you will be surprised, too, when you stop to think how vitally important those few things are. Better a makeshift home for one week than a home permanently motherless."

"Why, you surely don't think I'm going to die?"

"No, I intend that you shall live. And I intend that you shall not leave your family un-mothered. Mothering those children (yes, and your husband, too) is the one duty that no one can perform but yourself. Even their physical welfare can be looked after, in some fashion, without you. But their success in life, their mental and spiritual outlook, their relations with their fellow-men,—these all depend on the mothering you are able to give them.

"Has it occurred to you that your doing without a washing-machine may cheat Johnnie out of being the man he might have been if you were not too tired to develop that fine nature of his?"—I. S. H.

A washing machine will give mother time to be a mother.

That Backache

I WAS visiting a friend in town. She complained all during the evening that her back ached.

"Isn't it funny," the friend's husband said to me, "that Grace can drive her automobile all day and it doesn't make her back ache, but washing dishes always affects her back!"

Well, of course, I think I would prefer driving a car to washing dishes, too—and we joked about it during the meal.

I washed the breakfast dishes—I had dried them the night before—and then I understood why Grace's back ached.

No Wonder Her Back Ached

She is a tall woman, as tall as I, and I had to stand at an angle of forty-five degrees to wash the dishes. It was enough to make anyone's back ache—and I went at friend husband with hammer and tongs.

"Oh, don't tell me any more she wants, she just has her new car and a new heating system, and I'm broke."

"But this won't cost you anything," I said. "Just send one of your men up from the shop today with some tools, and we will boss him. It won't take but an hour or so."

"All right," he laughed, "whatever you say goes."

He did send the man up with tools and in short order the sink was raised to the correct height for my friend.

Her backache disappeared like magic.—May H. Mumaw.

STRAWBERRY CONSERVE

IT IS nearly time for strawberries to blossom, and after they are set, it is not very long until they are ripe. Be ready with a good conserve recipe:

1 quart ripe strawberries
½ lb. seeded raisins
1 quart granulated sugar
½ lb. nut meats (walnut or hickory are good)
2 oranges
1 lemon

Grind the oranges and lemon (rind and all) and also the raisins, in the food chopper. Mix all the ingredients and cook slowly until thick like marmalade.—C. B. L.

BIG SALE
Stylish Knife Pleated Skirt
MERCERIZED CANTON CREPE Dress
ONLY $2.98 C.O.D.

Here it is! The latest style hit—the height of fashion in America's style centers. WHAT joy entered my heart when I was aboard the steamboat and on my way to all most dear to me! As I entered Lake Champlain I consulted the map and decided to leave the boat at Chimney Point to find Kate Fullerton, who had written to the schoolmaster from Canterbury. My aunt had said in a letter that old Kate was living there and that a great change had come over her. So I went ashore and hired a horse of the ferryman—one of those "Green Mountain ponies" of which my uncle had told me: "They'll take any gait that suits ye, except a slow one, an' keep it to the end o' the road."

I think that I never had a horse so bent on reaching that traditional "end of the road." He was what they called a "racker" those days, and a rocking-chair was not easier to ride. He took me swiftly across the wide flat and over the hills and seemed to resent my effort to slow him.

I passed thru Middlebury and rode into the grounds of the college, where the Senator had been educated, and on out to Weybridge to see where he had lived as a boy. I found the Wright homestead — a comfortable white house at the head of a beautiful valley with wooded hills behind it—and rode up to the door. A white-haired old lady in a black lace cap was sitting on its porch looking out at the sunlit fields.

"Is this where Senator Wright lived when he was a boy?" I asked.

"Yes, sir," the old lady answered.

"I am from Canton."

She rose from her chair.

"You from Canton!" she exclaimed. "Why, of all things! That's where my boy's home is. I'm glad to see you. Go an' put your horse in the barn."

I dismounted and she came near me.

"Silas Wright is my boy," she said. "What is your name?"

"Barton Baynes," I answered as I hitched my horse.

"Barton Baynes! Why, Silas has told me all about you in his letters. He writes to me every week. Come and sit down."

WE SAT down together on the porch.

"Silas wrote in his last letter that you were going to leave your place in Cobleskill," she continued to my surprise. "He said that he was glad you had decided not to stay."

It was joyful news to me, for the Senator's silence had worried me and I had begun to think with alarm of my future.

"I wish that he would take you to Washington to help him. The poor man has too much to do."

"I should think it a great privilege to go," I answered.

"My boy likes you," she went on. "You have been brought up just as he was. I used to read to him every evening when the candles were lit. How hard he worked to make a man of himself! I have known the mother's joy. I can truly say, 'Now let thy servant depart in peace.'"

"'For mine eyes have seen thy salvation.'" I quoted.

"You see I know much about you and much about your aunt and uncle," said Mrs. Wright.

She left me for a moment and soon the whole household was gathered about me on the porch, the men having come up from the fields. The Senator had told them on his last visit of my proficiency as a sound-hand writer and I amused them by explaining the art of it. They put my horse in the barn and pressed me to stay for dinner, which I did. It was a plain boiled dinner at which the Senator's cousin and his hired man sat down in their shirt-sleeves and during which I heard many stories of the boyhood of the great man. As I was going the gentle old lady gave me a pair of mittens which her distinguished son had worn during his last winter in college. I remember well how tenderly she handled them!

"I hope that Silas will get you to help him"—those were the last words she said to me when I bade her good-by.

THE visit had set me up a good deal. The knowledge that I had been so much in the Senator's thoughts, and that he approved of my decision to leave the learned judge, gave me new heart. I had never cherished the thought that he would take me to Washington altho, now and then, a faint star of hope had shone above the capitol in my dreams. As I rode along I imagined myself in that great arena and sitting where I could see the flash of its swords and hear the thunder of Homeric voices. That is the way I thought of it. Well, those were no weak piping times of peace, my brothers. They were times of battle and as I rode thru that peaceful summer afternoon I mapped my way to the fighting line. I knew that I should enjoy the practice of the law but I had begun to feel that eventually my client would be the people whose rights were subject to constant aggression as open as that of the patroons or as insidious as that of the canal ring.

The shadows were long when I got to Canterbury. At the head of its main street I looked down upon a village green and some fine old elms. It was a singularly quiet place. I stopped in front of a big white meeting house. An old man was mowing in its graveyard near the highway. Slowly he swung his scythe.

"It's a fine day," I said.

"No, it ain't, nuther—too much hard work in it," said he.

"Do you know where Kate Fullerton lives?" I asked.

"Well, it's purty likely that I do," he answered as he stood resting on his snath. "I've lived seventy-two years on this hill come the fourteenth day o' June, an' if I didn't know where she lived I'd be 'shamed of it."

He looked at me thoughtfully for a moment and added:

"I know everybody that lives here an' everybody that dies here, an' some that orto be livin' but ain't an' some that orto be dead which ye couldn't kill 'em with an ax—don't seem so—I declare it don't. Do ye see that big house down there in the trees?"

I COULD see the place at which he pointed far back from the village street in the valley below us, the house nearly hidden by tall evergreens.

"Yes," I answered.

"No ye can't, nuther—leastways if ye can ye've got better eyes'n most people, ye can't see only a patch o' the roof an' one chimney—them pine trees bein' thicker'n the hair on a dog. It's the gloomiest ol' house in all creation, I guess. Wal, that's the Squire Fullerton place—he's Kate's father."

"Does the squire live there?"

"No, sir—not eggzac'ly. He's dyin' there—been dyin' there fer two year er more. By gosh! It's wonderful how hard 'tis fer some folks to quit breathin'. Say, be you any o' his fam'ly?"

"No."

"Nor no friend o' his?"

"No!"

"Course not. He never had a friend in his life—too mean! He's too mean to die, mister—too mean fer hell an' I wouldn't wonder—honest, I wouldn't—mebbe that's why God is keeping him here—jest to meller him up a little. Say, mister, be you in a hurry?"

"No."

"Yis ye be. Everybody's in a hurry—seems to me—since we got steam power in the country. Say, hitch yer hoss an' come in here. I want to show ye suthin'."

He seemed to enjoy contradicting me.

"Nobody seems in a hurry in this town," I said.

"Don't, hey? Wal, ye ought to 'a' seen Deacon Norton run when some punkins on his side hill bu'st their vines an' come rollin' down an' chased him half a mile into the valley."

I DISMOUNTED, hitched my horse to the fence and followed him into the old churchyard, between the weather-stained mossy headstones and graves overgrown with wild roses. Near the far end of these thick-sown acres he stopped.

"Here's where the buryin' begun," said my guide. "The first hole in the ground was dug for a Fullerton."

There were many small monuments and slabs of marble—some spotted with lichens and all in commemoration of departed Fullertons.

"Say, look a' that," said my guide as he pulled aside the stem of a leafy brier red with roses. "Jest read that, mister."

My keen eyes slowly spelled out the time-worn words on a slab of stained marble:

Sacred to the memory of
Katherine Fullerton
1787-1806
"Proclaim his World in every place
That they are dead who fall from
grace."

A dark shadow fell upon the house of my soul and I heard a loud rapping at its door which confused me until, looking out, I saw the strange truth of the matter. Rose leaves and blossoms seemed to be trying to hide it with their beauty, but in vain.

"I understand," I said.

"No ye don't. Leastways I don't believe ye do—not correct. Squire Fullerton dug a grave here an' had an empty coffin put into it away back in 1806. It means that he wanted everybody to understan' that his girl was jest the same as dead to him an' to God. Say, he knew all about God's wishes—that man. Gosh! He has sent more folks to hell than there are in it, I guess. Say, mister, do ye know why he sent her there?"

I shook my head.

"Yis ye do, too. It's the same ol' thing that's been sendin' women to hell ever since the world began. Ye know hell must 'a' been the invention of a man—that's sartin—an' it was mostly fer women an' children—that's sartiner—an' fer all the men that didn't agree with him. Set down here an' I'll tell ye the hull story. My day's work is done."

WE SAT down together and he went on as follows:

"Did ye ever see Kate Fullerton?"

"Yes."

"No ye didn't, nuther. Yer too young. Mebbe ye seen her when she was old an' broke down but that wa'n't Kate—no more'n I'm Bill Tweedy, which I ain't. Kate was as handsome as a golden robin. Hair yeller as his breast an' feet as spry as his wings an' a voice as sweet as his song, an' eyes as bright as his'n—yis, sir—ye couldn't beat her fer looks. That was years and years ago. Her mother died when Kate was ten year old—there's her grave in there with the sickle an' the sheaf an' the portry on it. That was unfort'nit an' no mistake. Course the squire married ag'in but the new wife wa'n't no kind of a mother to the girl an' you know, mister, there was a young scoundrel here by the name o' Grimshaw. His father was a rich man—owned the cooper shop an' the sawmill an' the tannery an' a lot o' cleared land down in the valley. He kep' comp'ny with her fer two or three year. Then all of a sudden folks began to talk—the women in partic'lar. Ye know men invented hell an' women keep up the fire. Kate didn't look right to 'em. Fust we knew, young Grimshaw had dropped her an' was keepin' comp-ny with another gal—yis, sir. Do ye know why?"

Before I could answer he went on:

"No ye don't—leastways I don't believe ye do. It was 'cause her father was richer'n the squire an' had promised his gal ten thousan' dollars the day she was married. All of a sudden Kate disappeared. We didn't know what had happened fer a long time."

"One day the ol' squire got me to dig this grave an' put up the headstun an' then he tol' me the story. He'd turned the poor gal out o' doors. God o' Israel! It was in the night—yis sir—it was in the night that he sent her away. Goldarn him! He didn't have no more heart than a grasshopper—no, sir—not a bit. I could 'a' brained him with my shovel, but I didn't.

"I found out where the gal had gone an' I follered her—yis I did—found her in the poorhouse way over on Pussley Hill—uh huh! She jes' put her arms 'round my neck an' cried an' cried. I guess 'twas 'cause I looked kind o' friendly—uh huh! I tol' her she should come right over to our house an' stay jest as long as she wanted to as soon as she got well—yis, sir, I did.

"She was sick all summer long—kind o' out o' her head, ye know, an' I used to go over hossback an' 'take things fer her to eat. An' one day when I was over there they was wonderin' what they was goin' to do with her little baby. I took it in my arms an' I'll be gol dummed if it didn't grab hold o' my nose an' hang on like a puppy to a root. When they tried to take it away it grabbed its fingers into my whiskers an' hollered like a panther—yis, sir. Wal, ye know I jes' fetched that little baby boy home i my arms, ay uh! My wife scolded me like Sam Hill—yis, sir—she had five of her own. I tol' her I was goin' to take it back in a day er two but after it had been in the house three days ye couldn't 'a' pulled it away from her with a windlass.

"We brought him up an' he was alwuss a good boy. We called him Enoch—Enoch Rone—did ye ever hear the name?"

"'No.'

"I didn't think 'twas likely but I'm alwuss hopin'.

"Early that fall Kate got better an' left the poorhouse afoot. Went away somewheres — nobody knew where. Some said she'd crossed the lake an' gone away over into York State, some said she'd drowned herself. By'm by we heard that she'd gone way over into St. Lawrence County where Silas Wright lives an' where young Grimshaw had settled down after he got married.

"Wall, 'bout five years ago the squire buried his second wife—there 'tis over in there back o' Kate's with the little speckled angel on it. Nobody had seen the squire outside o' his house for years until the funeral—he was crippled so with rheumatiz. After that he lived all 'lone in the big house with ol' Tom Linney an' his wife, who've worked there fer 'bout forty year, I guess."

"Wal, sir, fust we knew Kate was there in the house livin' with her father. We wouldn't 'a' knowed it, then, if it hadn't been that Tom Linney come over one day an' said he guessed the ol' squire wanted to see me—no, sir, we wouldn't—fer the squire ain't sociable an' the neighbors never darken his door. She must 'a' come in the night, jest as she went—nobody see her go an' nobody see her come, an' that's a fact. Wal, one day las' fall after the leaves was off an' they could see a corner o' my house thru the bushes, Tom was walkin' the ol' man 'round the room. All to once he stopped an' p'inted at my house thru the winder an' kep' p'intin'. Tom came over an' said he ca'llated the squire wanted to see me. So I went there. Kate met me at the door. Gosh! How old an' kind o' broke down she looked! But I knew her the minute I set my eyes on her—uh huh—an' she knew me—yis, sir—she smiled an' tears come to her eyes an' she patted my hand like she wanted to tell me that she hadn't forgot, but she never said a word—not a word. The ol' squire had the palsy, so 't he couldn't use his hands an' his throat was paralyzed—couldn't speak ner nothin'. Where do ye suppose he was when I found him?"

"In bed?" I asked.

"No, sir—no, siree! He was in hell—that's where he was—reg'lar ol' fashioned, down-east hell, burnin' with fire' and brimstun, that he'd had the agency for an' had recommended to every sinner in the neighborhood. He was settin' in his room. God o' Isr'el! You orto 'a' seen the motions he made with his hands an' the way he tried to speak when I went in there, but all I could hear was jest a long yell an' a kind of rattle in his throat. Heavens an' airth! how desperit he tried to spit out the thing that was gnawin' his vitals. Ag'in an' ag'in hed try to tell me. Lord God! how he did work!

"All to once it come acrost me what he wanted—quick as ye could say scat. He wanted to have Kate's headstun took down an' put away—that's what he wanted. That stun was kind o' layin' on his stummick an' painin' of him day an' night. He couldn't stan' it. He knew that he was goin' to die purty soon an' that Kate would come here an' see it an' that everybody would see her standin' here by her own grave, an' it worried him. It was kind o' like a fire in his belly.

"I guess, too, he couldn't bear the idee o' layin down fer his las' sleep beside that hell hole he'd dug fer Kate—no, sir!

"Wal, ye know, mister, I jes' shook my head an' never let on that I knew what he meant an' let him wiggle an' twist like a worm on a hot griddle, an' beller like a cut bull 'til he fell back in a swoon.

"Damn him! it don't give him no rest. He tries to tell everybody he sees—that's what they say. He bellers day an' night an' if you go down there he'll beller to you an' you'll know what it's about, but the others don't.

"You an' me are the only ones that knows the secret, I guess. Some day, 'fore he dies, I'm goin' to take up that headstun an' hide it, but he'll never know it's done—no, sir—not 'til he gits to the judgment seat, anyway."

The old man stopped and rubbed his hands together as if he were washing them of the whole matter. The dusk of evening had fallen and crocked the white marble and blurred the lettered legends around us. The mossy stones now reminded me only of the innumerable host of the dead. Softly the notes of the song sparrow scattered down into the silence that followed the strange story.

The old man rose and straightened himself and blew out his breath and brushed his hands upon his trousers by way of stepping down into this world again out of the close and dusty loft of his memory. But I called him back.

"What has become of Enoch?" I asked.

"Wal, sir, Enoch started off west 'bout three year ago an' we ain't heard a word from him since that day—nary a word, mister. I suppose we will some time. He grew into a good man, but there was a kind of a queer streak in the blood, as ye might say, on both sides kind o'. We've wrote letters out to Wisconsin, where he was p'intin' for an' to places on the way, but we can't git no news 'bout him. Mebbe he was killed by the Injuns."

We walked out of the graveyard together in silence. Dimly above a distant ridge I could see stark, dead timber looming on a scarlet cloud in the twilight. It is curious how carefully one notes the setting of the scene in which his spirit has been deeply stirred.

I could see a glimmer of light in the thicket of pines down the valley. I unhitched and mounted my horse.

"Take the first turn to the right," said the old man as he picked up his scythe.

"I'm very much obliged to you," I said.

"No ye ain't, nuther," he answered. "Leastways there ain't no reason why ye should be."

Did you ever hear this one?—

The following card of thanks recently appeared in a Kansas paper: "I wish to thank the city authorties for quarantining my family and me for three weeks recently because one of them had the smallpox. During that time my wife caught up with her sewing; we had three square meals a day, as no one came in and she was not permitted to leave; we enjoyed three weeks of good nights' sleep; and best of all, a cousin with four children had arranged to visit us, saw the smallpox sign on the door door, and left town so scared she will never come back again. So for these and other blessings we are very thankful for the quarantine."

Farmer—How did ye come by that black eye, Jarge?"

Jarge—Ole cow had a way o' kickin' me face wi' her tail, so I tied a brick onto it."

"Ah see yo' is housecleaning," said Mrs. Snow White.

"Yes," replied Mrs. Marsh Green, "dey is nothin' like movin' things 'round once in a while. Why, I jes come across a pair oh slippers under de baid Ah hadn't seen foh five yeahs."—DeLaval Monthly.

GRASS SEED—WHOLESALE PRICES

Toledo, Ohio, May 9, 1925

Cloverseed, cash, $16 asked; October $12.50; December, $13.35. Alsike, August $12.50. Timothyseed, cash, $; September, $3.50.

FEED PRICES

The prices below are for prompt shipments based on payment on arrival of cars as quoted by the Philadelphia jobbing trade to retail feed dealers on Monday, May 11. Quotations cover solid car lots for delivery at Philadelphia or ton rate points.

Pure spring bran	$36.50@
Spring bran	
Soft winter wheat bran	
Hard winter wheat bran	
Standard middlings	36.00@
Soft winter wheat middlings	
Flour middlings	
Red dog flour	43.00@
White hominy	45.00@
Yellow hominy	
Yeast grains, 30 days, 125-lb sacks	
Pure dried brewers' grains, 30 days	
Gluten feed	
36 per cent cottonseed meal	41.75@
41 per cent cottonseed meal	47.75@
43 per cent cottonseed meal	
34 per cent linseed meal	

For Baltimore, Cumberland and Williamsport rate points, subtract 20c per ton (for cottonseed meal 40c per ton); for New York, Newark rate points, add 40c per ton (for cottonseed meal 60c per ton); for Woodbury, Bridgeton rate points, add $1.00 per ton; for Freehold, Toms river, Cape May rate points, add $1.40 per ton.

Mills are running light, dealers' stocks are limited, and demand is for prompt and quick shipment feeds.

Bradford County, Pa.—Several inches of snow fell April 30. We have had considerable rain the past two weeks. Most ground will be too wet to plow for several days. Oat sowing nearly all done altho some have not sown any as yet. Farmers busy seeding oats and plowing corn ground. Very little stock turned out to pasture yet. Hay is plentiful and almost no sale for it. Good timothy, baled, brings only about $15 a ton and lucky to find a buyer at that price. Straw is scarce and sells readily at $14 a ton baled. Winter grain came thru the winter fairly, considering the poor start it got last fall. There will be many idle farms thruout the county this year. Quite a number of farmers sold out this spring but not as many as a year ago. Farm help is scarce. Several miles of state and county roads are to be built in the county this summer, which makes it harder for farmers to get help. The milk situation is better at this time than a year ago. Fresh cows are bringing good prices. There are not as many cows kept in this section as there were two years ago. Not as many are being raised as formerly. Prices are: butter, 45c; eggs, 25c; potatoes, 60c bu.; apples, $1 bu.; live veals, 10c; live hens, 24c; bran, $37 ton; gluten, $40 ton; cornmeal, $51 ton; wheat, $3.50 cwt.; corn, $2.70 cwt.—H. D. C., May 5.

Carroll County, Md.—A rainstorm visited this county April 19 in the afternoon, followed by cold weather. The thermometer dropped below freezing. The farmers experienced difficulty in harrowing early on the following morning, as the ground was frozen. The county agent estimates fruit crops will be about half of normal. Peaches were hit hardest and apples it is thought will make sixty per cent of a crop. Early gardens showed effects of freeze. The weather has been favorable for farm operations until past week. Probably more corn planted in April than for several years. Preparation of the soil and corn planting are main occupations of farmers now. Peas and oats are growing well and early planted potatoes are up. Wheat is looking good, but barley not so good due to poor stands. Grass and clover at a good stand but making slow growth because of cool weather. Corn is varied in price, depending on quality, price ranges from $5.50 to $7 per barrel of 280 pounds. Wheat, $1.60 bu.; potatoes, [illegible]$1 bu.; eggs, 25c.—H. I. R., May 1.

Clearfield County, Pa.—Owing to favorable weather for farm work, plowing and spring seeding are well up to date. It seems to one who travels about over these hills that there is a larger acreage of spring plowing than usual. The condition of the soil in some fields shows the effect of tillage last season when the soil was too wet to work. Pastures are about normal for the first of May. Mortalities of livestock slightly less than is common during the spring months. We have had extreme heat for April, followed by snow flurries and some freezing by night. Saturday morning we had a heavy frost on the hills, and down in the valleys ice formed. The fruit bloom is damaged and perhaps almost totally ruined. Dirt roads, of which we have plenty, were in good condition in all townships where an early system of crowning and dragging was carried out. It now looks as tho more motor work and less horse labor is one key to cheaper road maintenance.—D. H. F., May 5.

Columbia County, Pa.—Farmers well along with spring work. Oats sowed and some ready to plant corn. Spring has been cold and in many sections the fruit crop will be a failure. Prospects good for grass. Many report bad luck with baby chicks. Eggs, 26c; butter, 35c; old [illegible], [illegible]; veal calves, 10c; wheat, [illegible], corn, $2; oats, 60c.—J. H. L., May 4.

Elk County, Pa.—This has been a peculiar season in this locality. Rather than a gradual breaking up of winter we have had a succession of hot days followed by cold rain or snow with about two weeks of cold, dry weather. The latter part of April was very dry and brought us many fires. Many farmers got the seeding done during the last of April, earlier than for several years. A large percentage were unable to seed due to a tie up on the fertilizer question. Whether we were made to wait because we were a backwoods county or whether or not there was a real tie up at fertilizer headquarters, we have been unable to decide. Prices not much changed; eggs, 35c; butter, 45@50c; veal, 14@17c; potatoes around $1; hay, $25; straw, $18.—R. D. M., May 5.

Juniata County, Pa.—The farmers are well on with their spring work. Oats all sowed and some corn planted. Grass fields looking good. There is an abundant stand of clover and timothy. Wheat fields rather spotted and thin looking. It is feared that the fruit was badly damaged by recent freezes, especially the early varieties. Orchard spraying about finished. Many farmers are buying hatchery chicks and raising them with brooders. Pigs very scarce and high in price. Beef cattle scarce and command high prices. Meadows show up nicely and cows will be turned to pasture early this month.—C. B. L., May 1.

Lebanon County, Pa.—The weather conditions for the last week or more were unfavorable for doing farm work. With a few exceptions all the oats are sown. Many farmers in all sections of the county were planting potatoes prior to the recent rainy season. Many are applying a good grade fertilizer to their oats and potato crops. Apple orchards have been sprayed for the second time this spring. The new grass fields of clover and alfalfa exceptionally good, about ninety-five per cent normal. The wheat fields in general look good, with the late sown and backward fields improving very much. It has been reported that in several instances corn has been planted, but the weather conditions at this writing are not favorable for planting. The stock has wintered well and is generally in good condition. It is believed that the heavy frosts during April were hard on fruit trees, especially the peaches. The citizens of Lebanon County are obliged to build two bridges across the Swatara Creek. The one at Jonestown is to be of concrete and the one at the Union water works is to be of steel and iron construction. Prices: wheat, $1.50 bu.; corn, $1.25; oats, 60c; hay, $15 ton; straw, $12 ton; apples, $2@2.50 bu.; butter, 55c; eggs, 28@30c; milk, $2.20 cwt.—P. L. M., May 4.

Monmouth County, N. J.—Clear and cool with frost about once a week. In spite of adverse weather conditions in many fields the Cobblers are coming thru the ground. The final plantings showed a slight increase over the report of the six weeks previous making the total acreage about 15,000. Corn planting is moving along rather rapidly. Fruit prospects with apples and peaches are fair to good. A few varieties, such as Delicious, in some orchards have been killed to the extent of thirty to forty per cent by the late freezes. Aphis in many orchards were pretty well destroyed by the delayed dormant spray and later by the pink bud spray. Approximately 500 acres of tomatoes have been contracted for with a canning house. Such vegetable crops as sweet corn, and early tomatoes have been about doubled this year, with an increase in such other vegetables as peppers, eggplants and turnips. Eggs range on the farm from 35@45c with prospect of a better market when the shore resorts open. Birds on range are up to normal.—E. D., May 4.

Snyder County, Pa.—Farm work well advanced. Corn planting has begun, but is being delayed by a cold, wet spell. Snow fell during the morning of Thursday, April thirtieth. Ridges were white. Trees were in full blossom, but apparently no damage done. A severe freeze on the night of May 2 took the thermometer down to twenty-eight degrees. This is the danger line for fruit blossoms, but on high ridges it appears certain that no harm was done. Milk production good. Wheat, $1.60; oats, 60c; corn, $1.35. Farmers have corn ground plowed and await favorable weather to plant. Good seed scarce, tho many farmers have a supply of reliable seed held over from the 1923 crop. Hog sales weekly and bringing good prices. They are brought in from surrounding counties as well as from local raisers. Elias Ritter, Snyder County's champion potato raiser, will put out a large acreage. He applies fertilizers liberally and plants only certified seed. Many old potatoes on hand with no market.—W., May 4.

Sullivan County, Pa.—The recent cold snap did not harm the fruit trees as they were not advanced far enough. Apple trees are coming into bloom. Winter grain is much better than was expected. Nearly all the plowing is done. Most farmers have their oats planted. The sale for potatoes and hay is picking up. Road construction jobs are well under way. The state is widening and resurfacing the road to the summer resort at Eaglesmere. Many people are buying baby chicks. Trout seem very plentiful. The ring-neck pheasants, imported last fall, are doing nicely. Some prices: butter, 40c; eggs, 25c; lard, 25c; potatoes, 75c; buckwheat, $1.15; hay, $20, at barn.—M. G., May 1.

Gloucester County, N. J.—Nearly all the early tomatoes are in the field. There has been little damage by the cold weather. Fruit was hurt in spots by the freeze in the latter part of April. Labor continues to be sufficient to meet all the needs, with prices about the same as last year. Asparagus shipments are breaking all records; and the price is holding up well considering the quantity. Pastures look good. There will be very little surplus milk this spring. The Salem-Gloucester Cow Testing Association has again started on another year's work with twenty-five members. Farms are continuing to be bought up for real estate divisions. The James Kincaid farm near Pitman was sold recently for $120,000, this is probably the biggest deal in the county. The farm, one of the finest in South Jersey, will be laid out in building lots. The price was around $550 per acre. It is estimated that close to four thousand acres of good farm land has been taken up by development companies in this county in the last two years.—A. K., May 6.

Lancaster Tobacco Letter

THE market on tobacco of the 1924 crop still in the hands of growers is becoming decidedly sluggish and prices have steadily dropped. Quite a few buyers are still in the field, but the leaf is moving very slowly and at prices which are lower than have yet been paid.

Few, if any, sales were made during the past week at prices above thirteen or fourteen cents, and the bulk of the transactions were completed at from ten to twelve cents per pound. A lot of crops are selling below the ten-cent mark.

There is more tobacco now in the growers' sheds than has remained unsold at this time of the season for a good many years. So acute has the situation become that many growers are visiting the offices of city and county packers with samples of their tobacco in an endeavor to stir up some interest in their crops.

Preliminary preparations for the formation of a cooperative marketing organization to handle the crop of Pennsylvania cigar leaf tobacco grown in Lancaster, York, and parts of Berks, Chester and Lebanon Counties, are in full swing. The committee of organization is functioning actively, and sub-committees are at work on the various phases of the organizational work. It is the intention of the leaders in the movement to have the cooperative set up and ready to do business in time for the marketing of the 1925 crop.—Garden Spot Farmer.

My Bird Friends

(Continued from page 14)

The catbird is another saucy fellow. There is a family of cat birds in our pear tree almost every spring. One morning two catbirds got to fighting with a hen; and I think the birds got the best of it. At times the young birds fall from the nest and we try to put them back but the old birds fly at us and do their best to keep us away. Last year a pair of catbirds had a nest in the wall of our house. We could hear the old birds going to and fro inside the wall.

There are many sparrows around here, and also many wrens. I think Jenny Wren is about the most cheerful bird I know. She seems to be bubbling over with happiness and I like to hear her song.

There is a pair of blackbirds in a tree near the house nearly every morning when I awake and sometimes I hear a mockingbird.

In the evening I can hear the whippoorwills and if I go out they fly almost on my head. In the morning I often hear the bob white calling, and the woodpecker getting his breakfast on an old tree. The bluebirds and the yellow birds are not so plentiful or else they are more shy, for I hardly ever see any near the house, but always away from the buildings somewhere.

Today I heard a killdeer calling from the woods and I saw a lot of very small birds with yellow breasts. Their song sounded like "cheer-up, cheer-up." I think they were yellow warblers.

Sometimes I find nests with spotted eggs in the meadow. They belong to the meadow lark and once in a while I see a flock of partridges. It is a shame for people to kill such pretty birds.

Sometimes I see a kingfisher along a creek, and I often see birds that are strangers to me.—Blanche Brubaker, Snyder County, Pa.

Potato Growers' Meeting

(Continued from page 3)

storage, giving plans, specifications and estimated costs, to be distributed from State College within the next three weeks, and sent free, on request. The results of this season's experiments with potatoes at the Marble Laboratory will be published by the Laboratory, and will be available to anyone who is interested, on application.

After July 1, 1925, the Marble Laboratory is to be affiliated with the Department of Horticulture of the Pennsylvania State College, as the Division of Storage Research, and Mr. Marble will serve on the staff of that department as Professor of Storage Research. The investigations on problems in the storage of apples, which have been conducted at the Laboratory for several years, will be continued and extended.

Veterinary

Conducted by W. C. Fair, V. S.

Advice thru this department is free to our subscribers. Each communication should state history and symptoms of the case in full; also the name and address of writer. Initials only will be published. We cannot make reply by mail. This is one of the most valuable columns of the paper and we invite readers to make use of it. Clippings from this column, when properly preserved and classified, make one of the most valuable medical symposiums a farmer-stockman can obtain.

AFFECTIONS OF THE SKIN.—The skin, or tegumentary system, envelops the body and differs in thickness in different parts of the same body, as well as in different animals. It is very porous and exceedingly elastic. In some parts of the body it is loosely attached, while in others tightly attached. It is made up of the cutis, or true skin, and the epidermis, or scarf skin. The corium, or under, and the papillary, or upper layer, form the true skin. The skin serves as a protection, and becomes continuous with the mucous membrane at the lips, anus, etc.

The appendages of the skin are hair, sebaceous and sudoriferous, or sweat glands, follicles, etc. The soft, smooth hair covering the body of the horse is known as the coat, while the coarse hair of the mane and tail is referred to as horsehair. When a hair bulb is completely destroyed, the hair is never reproduced. In fever the hair becomes harsh and dry, due, no doubt, to the fever affecting the hair follicle.

The sudoriferous glands are very abundant and highly developed in the horse; for this reason the horse perspires more freely than any other animal. Perspiration prevents too great a rise of temperature, and relieves the system to a great extent, more particularly during times of severe exertion. It is computed that there are about 2000 of these glands to the square inch of body surface.

The sudoriferous, as well as the sebaceous glands are more numerous in the flexures of the heels, hocks, knees, etc., and those parts are subject to many diseases. The sebaceous glands secrete and throw out a fluid which lubricates and serves to keep the skin in a soft and pliable condition. The skin is subject to inflammation of various kinds. We may have erythematous inflammation of the skin, presenting at first well-marked congestion, followed by inflammation, which, if allowed to go on, may result in an eczematous condition, as in greasy heel, etc., or ulcers. These may be constitutional or sympathetic, depending upon some functional nervous derangement. This eczematous condition is very troublesome to treat if neglected, and allowed to become chronic. Heavy coated work horses should be clipped, then the skin can be kept clean.

WORMS — BRUISED UDDER. — I have a horse infested with the long round worms. They have troubled him for a year. He seems out of condition, but works fairly well. He weighs 1450 pounds, is fed corn, oats, wheat bran and timothy hay. I also have cow due to have her sixth calf in June, for the past two seasons she has occasionally had congestion of the udder. What can I do to prevent it? I also have two heifers due to freshen in about five months; they suck each other and I would like to know how to prevent them doing so.—F. J. S., Schnecksville, Pa. Give your horse a teaspoonful of powdered sulphate of iron and a tablespoonful of powdered gentian in ground feed twice a day until he ceases to pass worms. The writer is inclined to believe your cow bruises her udder. The trouble being local, you had better apply one part tincture of arnica, in six parts tepid water to bruised portion of udder three times a day. Keep the heifers separate. As a rule, mechanical appliances do not prevent one animal from sucking its mate, while it may prevent the animal from sucking itself, that's why they should not be kept together.

Advice to the thin: Don't eat fast.
Advice to the fat: Don't eat. Fast.

Our Readers' Classified Advertising Department

A market place to buy or sell at little expense. Over 90,000 farm families read Pennsylvania Farmer every week. Rate 6 cents a word each for one, two or three consecutive weekly insertions; 5 cents a word each for four or more insertions. Count each number and initial and send cash with order. Now Only $5.69 Puts A Witte On Your Place

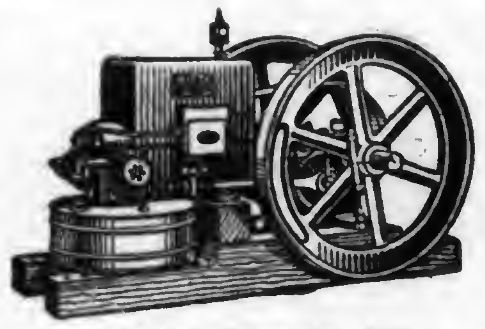
Thousands Accept Liberal Offer On This Famous Throttling Governor Engine.

Thousands of farmers, appreciating the need for cheap dependable power on the place, have accepted the liberal offer of Ed. H. Witte, world-famous engine manufacturer. Mr. Witte makes the startling offer to put the standard Witte Throttling-Governor Engine to work for you for as low as $5.69 down.

The famous Witte Throttling-Governor Engine, known all over the world, comes fully equipped on this offer. Has celebrated water-proof WICO Magneto and forty other improvements, including a new device that makes starting easy at 40 degrees below zero.



The Rugged, Dependable Witte.

Long regarded as the cheapest and most dependable farm engine built, the WITTE develops 50% extra power on either kerosene, gasoline, distillate or gas. Operation on full load figures under 2c an hour. Trouble-proof and so simple that the women folks can operate it. Easily moved from job to job. More than 150,000 WITTES are in daily use.

To introduce this remarkable engine to a million new users, Mr. Witte will send it anywhere, direct from factory, for a guaranteed 90-day test.

Every reader of this paper who is interested in doing all jobs by engine power should write today for a free copy of a remarkable new, illustrated book just issued by Mr. Witte, which explains the engine fully. You are under no obligations by writing. Just send your name, a postcard will do, to the **Witte Engine Works, 2013 Witte Bldg., Kansas City, Mo., or 2013 Empire Bldg., Pittsburgh, Pa.,** and receive this interesting and valuable book that gives you valuable information about the application of engine power on your farm.

Hitch Your Tractor To The FARQUHAR *'Junior Thresher'* And Thresh 50 bu. per hour.

Individual or group threshing is profitable because it permits earlier threshing, requires less labor, and you use your own tractor for power.

The Farquhar "Junior" has a capacity of about 50 bu. per hour of average wheat. It does a nice clean job of threshing any kind or condition of grain. It saves the grain and cleans it ready for market. The Fordson has ample power to drive the Farquhar "Junior."

If you have not yet received our 1925 announcement, write us at once.

How Chrysler Meets Motoring Needs in the Country

No one understands better than Walter P. Chrysler himself, the particular problems and needs of rural transportation.

They have been a continuous part of his life and work ever since his boyhood days in the little town of Ellis, Kansas.

Through the years he has studied them, and they were foremost in his mind when he built the car that bears his name.

His answer is a car with the wonderful stamina and stand-up ability that comes from highest quality—a car with gasoline economy safely over 20 miles per gallon; a car of moderate weight that rides as steadily as a two-ton car; a car that rides the ruts with comfort, even at the highest speeds.

These, with a motor having literally no period of vibration, and a high-gear speed range from 2 to over 70 miles per hour, are some of the unequaled results built into the Chrysler.

Nothing less than the Chrysler kind of engineering could produce the unprecedented results which are now so famous.

Nothing less than the vast Chrysler manufacturing facilities could produce such quality at Chrysler prices.

And nothing less than Chrysler ideals could inspire every man in a great organization to produce the best car and the best value that men and machinery can build.

Here, in brief, are the reasons why Chrysler results are not equaled; and why the Chrysler is winning its friends from all classes of motor car owners and buyers, in the country and the towns alike.

If you are not familiar with Chrysler beauty and performance by personal experience, the nearest Chrysler Six dealer will gladly give you your own kind of demonstration, over your own kind of roads.

The Touring Car, $1395; The Phaeton, $1495; The Roadster, $1625; The Sedan, $1825; The Royal Coupe, $1895; The Brougham, $1965; The Imperial, $2065; The Crown-Imperial, $2195. All prices f.o.b. Detroit subject to current government tax.

Bodies by Fisher on all Chrysler Six enclosed models. All models equipped with special design six-ply, high-speed balloon tires.

There are Chrysler dealers and superior Chrysler service everywhere. All dealers are in position to extend the convenience of time-payments. Ask about Chrysler's attractive plan.

$1000 Ahead!

CHAS. T. SCHUBERT, *Satisfied Primrose User Says:*
"We have been on this farm for the last six years and we milk six cows on an average and we honestly believe if we had purchased a Primrose when we first came to the farm we would be $1000.00 ahead of what we are now."

Just Say the Word

and the Local Dealer Will Put a New McCormick-Deering Primrose on Your Farm—and ask only a Small Payment Down

He will set up the machine on your own farm and show you how to use it. It will be adjusted perfectly, and if it doesn't do better work and run easier than any cream separator you ever owned you will be under no obligation to keep it.

Remember, the McCormick-Deering Primrose is a mechanical masterpiece—perfect in operation, yet simple in design. Its *ball bearings* make it easy to turn. Its high-grade materials, accurate construction, and automatic oiling system guarantee long life.

The world's easiest-running cream separator is yours for a small down payment—with 12 full months to pay. Better say the word today!

12 Full Months to Pay

J. W. PLATT, *Colesburg, Iowa, says:*

"I do not believe there is another cream separator of any other make in this community skimming so close and giving as high a test as our Primrose.

"Anyone looking for a close-skimming, economical cream separator does well to buy a Primrose—for it's a machine that can't be beat."

Electricity Saved the Peach Crop

This Jersey Fruit Grower Has a Unique Plan for Fighting the Oriental Moth

By AMOS KIRBY

SWEDESBORO, New Jersey, can boast of being the home of a man who has demonstrated the practicability of electricity in combating the most destructive orchard pest known.

To Hurff weatherby, of Swedesboro, goes the honor of being the first farmer to light a sixty-acre peach orchard with electricity and to save a thirty thousand bushel crop of peaches from the ravages of the Oriental moth. The reduction of his loss from ten thousand bushels in 1923 without lights to less than a dozen baskets in 1924 with lights, is ample evidence of the value of electricity in reducing moth damage to a minimum.

We shall let Mr. Weatherby tell the story in his own words.

"In August, 1923, we stopped picking peaches with at least ten thousand bushels of the finest peaches ever grown still hanging on the trees. They were so badly stung by the Oriental moth that it was almost impossible to find a perfect fruit. It was a heavy blow to me to leave such fruit in the orchard, but I wanted to save my reputation as a packer of good fruit. The fruit was so badly stung that there was hardly a perfect peach in a hundred.

A Lantern Showed the Way

"One night I had an occasion to go to the packing house for something, which, by the way, is in the orchard. I carried a lantern to find what I wanted in the packing house. Stopping for a minute in the orchard, I noticed the bugs and the moths fluttering around the lantern and the idea of light attracting the night insects came to me like a flash. I recalled seeing around street lights hundreds of insects of all kinds. I wondered if the Oriental moth was like all the other moths.

"The night following I hung a lantern on a post near the packing house as an experiment. All thru the day I was puzzled about what to do to capture the moth. Sprays had been found ineffective, he would not eat poison, and he was around only at night. I was convinced the light would do no good without some means of capturing the pest.

"As a starter, I placed a pan of kerosene oil under the lantern and watched. It was not long before the insects came to see the new orchard wonder, a light. The news soon spread and within a quarter of an hour, possibly every specie of bug within a mile of the orchard sent a representative to investigate. They buzzed, and fluttered and sung and danced. They stayed until some fell by exhaustion, others were probably knocked to the ground and others were intoxicated by the fumes from the oil. Within an hour, many kinds of moths and other insects were floating in the basin of oil. I was convinced of the value of the oil and the lights to combat the Oriental moth.

The Idea Takes Hold

"The only solution of the problem would be to light the whole orchard. I first thought of using lanterns, but this idea was immediately given up when I considered the labor of lighting and caring for lanterns enough to equip a sixty-acre orchard. The ten thousand dollar loss of my fruit was still close to the surface; it could not be forgotten. The problem had to be solved before another year.

"I suggested lights to my best friends in Swedesboro. They were polite enough not to laugh, but they advised me to wait; maybe something would happen; a natural enemy would be found to keep the moth in check. At last I took the matter up with Charlie Brown, of Swedesboro. Charlie has a fine peach orchard. He is a good farmer and besides he can see things that are hidden to most of us. So one day Charlie called in the electric company people and put the idea before their representative. The idea was so new and unheard of that he took the proposition up with the head engineers of the company. They saw the possibilities of the new field and immediately worked out the plan upon which the orchard is now lighted.

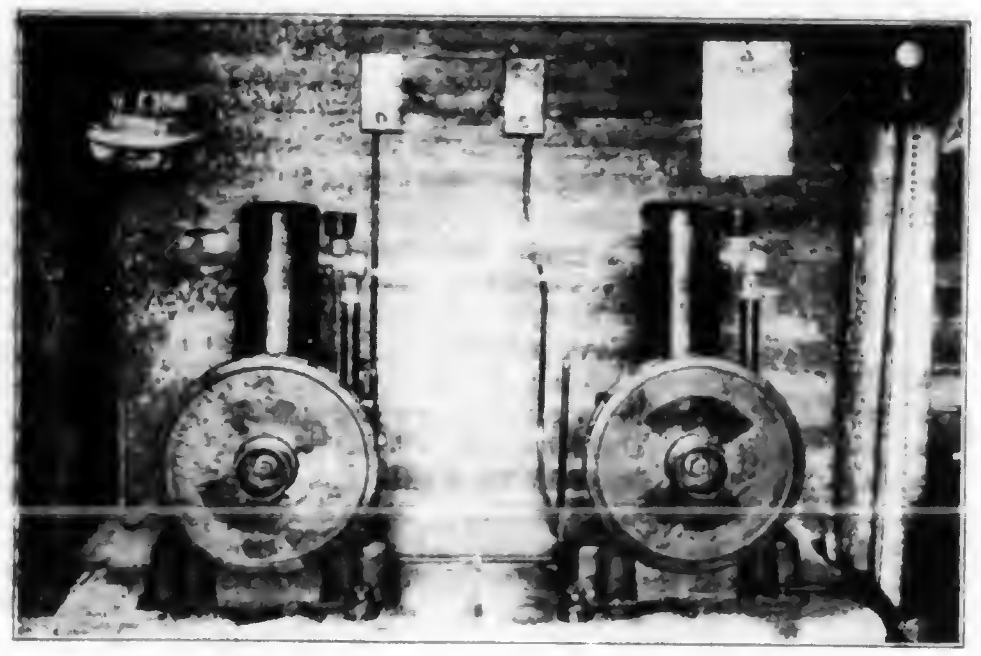
Plant as Good as When Installed

"The electric light plants and all the poles and wires were installed early in the spring of 1924. The two plants lighted my orchards all thru last summer, and when the representative of the factory called recently he advised, after a careful examination, that they did not need any repairs and were in as good a condition as when they were first used. Our equipment consists of 125 electric lights scattered over the orchards at the rate of about two to the acre.

"We erected poles to carry the wires above the trees so there would be no interference in spraying, cultivating or picking the fruit. Under each lamp is a pan of oil emulsion that does the work. The lamps and pans are placed low for convenience in filling and cleaning. It is doubtful if any better results could be secured if they were up in the air.

"Observations in the orchard last summer taught me a lot about the habits of the moth and other orchard pests. The light attracts all orchard pests, including the coddling moth, the curculio and many others. It was impossible to tell how many we caught, but we do know it must have run into the hundreds of thousands of insects. We observed that most of the pests were around between 8.30 and 2.00 o'clock at night. We watched the orchard for several nights and found that the bugs had all gone to bed or left the orchard by 2.00 o'clock.

"We started our plants around eight o'clock and gave them enough fuel to run for six hours when they would automatically stop. In the pans we would use an oil emulsion of crude oil and water. The pans would need cleaning out every few days. In the case of rain, they would have to be emptied and refilled which took some time to do, if only one person attended to this work."



The two electric generating plants which saved Mr. Weatherby's crop.

In answer to our question as to whether it paid, Mr. Weatherby replied: "Results are what count, and we saved our crop. To me this would be ample evidence of its value as a means of controlling the moth."

When we called to see Mr. Weatherby in the latter part of April we found him on the job of looking after his 125-acre farm. He will be eighty years old this fall. He assumes active management of the entire farm, that employs eleven men as a regular spring force to care for the orchards and to put in the other crops, which include early tomatoes, cantaloupes, sweet potatoes, and watermelons. During the picking season he has close to fifty people at work on the farm.

The moth trap is simply a light and a pan of oil.

All the fruit is packed in bushel baskets and sold in solid cars. One of the brokerage firms in Swedesboro assumes all marketing details and sees that the fruit is loaded properly for distant markets. These peaches are sold thruout New England, New York state and in Canada. Thirty to thirty-five cars are usually picked each summer and fall.

Three Important Factors

Mr. Weatserby believes in thoro cultivation, proper spraying and careful pruning as important factors in successful fruit production. The orchards were in bloom when we went thru them late one afternoon. He then had his men pruning out branches loaded with bloom as an easy way of saving the tree from damage by too heavy a crop of fruit. He believes thinning does more for the tree than it does in the production of bigger fruit.

For cultivating the orchards tractors are used. He has two of them so that the work can be done at the right time. He also has two big power sprayers. One was just bought at a cost of a thousand dollars. He says a sprayer is one machine that will stop work when it is needed the worst. So he keeps two to avoid any delay, when every minute counts in spraying trees.

In parting Mr. Weatherby told me to tell Pennsylvania Farmer readers, "Come down to Swedesboro and see this plant in operation and the kind of fruit that we produce for ample evidence of lights in the orchard."

Member Agricultural Publishers Ass'n and Audit Bureau of Circulations

Vol. 91, No. 21. Phila., Pa., May 23, 1925 Whole No. 1462

OUR JOB is to serve our readers. Whenever you are puzzled write to us and we will help you if we can.

The easiest thing to lose, and perhaps the costliest, is one's temper.

"Our Money"

UNDER the heading, "Spending Our Money for Propaganda," the Price Current Grain Reporter, a Chicago paper published in the interest of grain dealers, prints an editorial condemning the experiment stations which propose to use any part of the money appropriated by the Purnell Act for work other than production studies. Especially does it mention the proposals of the Colorado Station which proposed to study such subjects as, The Causes of Failure of Cooperative Organizations, What Happens to Crops between the Farm and the Consumer? Survey of Farm Business Methods, The Use of Electricity on the Farm, Better Crop Practices and More Economic Poultry Production.

We fail to see wherein there is any just ground for criticism on the part of grain speculators or their mouth-pieces in such a program. Surely, it is no more of a program for class benefit than it would be if it included only plans for increasing production, except that in the latter event it would be the speculating and consuming classes that might benefit while farmers would be the losers.

A Long View Needed

SECRETARY OF COMMERCE HOOVER recently said that one thing this country greatly needed was a long view concerning agriculture and its relation to the nation as a whole. He pointed out that no stability could be expected in any line of industry until agriculture attained to a state of permanent stability. He said:

"After seven years of constant study and practical dealing on an unprecedented scale with the broad economic currents of production and distribution, I have the conviction that the first thing needed in aid of the American farmer is a positive, long-view national policy for better setting of agriculture in our whole national economy."

To whom shall we turn for persons capable of taking the long view? We have had volumes written on "agricultural betterment," and the air has been charged with talk from statesmen and would-be farm leaders each giving his views "in no uncertain sound" as to what should be done. But after all, no permanent policy based upon the long view has been adopted, nor even evolved. Too many of the efforts have been based upon class feeling, local desires, personal ambitions, and immediate needs. And what is worse, many of the agricultural relief nostrums are born with the political desires of ambitious but ignorant politicians, and some of these have been farmers!

Capital and Conscience

CAPITAL always seems to be willing to take chances in cooperating in any kind of business which offers reasonable certainty of making profits. It has no scruples as to the character of the business in which it engages, even tho it be bootlegging or promoting war by furnishing guns and ammunition. President Coolidge recently expressed his disapproval of loaning American money to nations when the obvious purpose was to use it in war or preparation for war. Ambassador Houghton probably did the whole world a service when, in a recent speech in England, he said in words which could not be misunderstood:

"The full measure of American helpfulness can be obtained only when the American people are assured that the time for destructive methods and policies has passed and that the time for peaceful upbuilding has arrived. They are asking themselves if that time has in fact come. . . .

"If the answer is peace, then you may be sure America will help to her generous utmost. But if—which God forbid—that answer shall continue doubtful, then I fear that those helpful processes which are now in motion must inevitably cease."

This nation is fortunate in having at the helm men of character and vision who can lead in forming national sentiment and policies which may inject into capital the idea of letting conscience have some say in "business."

Where the Money Goes

A GREAT deal is said in a general way about the costs of distribution but little careful work has been done to find out just what makes up these costs. A joint marketing research staff made up of representatives of the Port of New York Authority and the Department of Agriculture has just published the findings of an exhaustive inquiry into the subject. For one thing they followed the course of boxed Winesap apples from the state of Washington to the consumer's table and these are the resulting figures in the case of a box of Washington apples which cost the consumer five dollars and nine cents:

Retailer's margin	$1.90
Jobber's margin	.53
Wholesaler's margin	.43
Transportation charges	.78
Shipping organization charges.	.26
THE GROWER RECEIVED...	1.19
THE CONSUMER PAID	$5.09

This analysis will help the eastern grower to realize just how much he profits by being close to the consuming centers. Many will be surprised to find that the advantage is not so great as they imagined, because the easterner's comfort must come from whatever he can save on the seventy-eight-cent transportation charge. It must be remembered that $1.90, or 37.3 per cent, which the retailer received was not all profit. The bushel of apples was probably delivered in small packages to several widely distributed customers. As long as the practice of buying apples and potatoes in half pecks and quarter-pecks continues, and the purchases probably charged and delivered, the opportunity for greatly reducing distribution costs will remain small.

Boom Prices Disastrous

THOSE who pretend to know say that prices for wheat, hogs, cattle and dairy products are likely to take and maintain higher levels than has been the case recently. This is encouraging, if it proves to be correct prophecy, but it should not lead to injudicious expansion. The thoughtful farmer has come to dread a period of exceptionally high prices in any line of agricultural production, because he has learned that it is sure to be followed by over-production and low prices. The limiting of production to meet normal demands is something that, so far, has not been worked out and it is doubtful whether it can be done. The extent of production in nearly every other line can be increased or decreased almost over night, but when crops are planted or a generation of animals started, it takes months or even years before the basis can be changed.

About the only logical method of regulating production to needs is to greatly increase the system by which the statistics relating to intentions to plant are collected. IF, (and that is a big word), after the publication of the intention-to-plant figures it is found that the proposed acreage is beyond the probable needs, farmers would change their plans by reducing the crop acreage to meet the needs, over-production could, in a measure, be avoided. But if they go ahead and over produce in the face of such knowledge they cannot be pitied for the distress which follows glutted markets.

No law nor system of business can obviate the necessity for exercising common sense in any kind of business and there is no line in which it is more necessary than agriculture. Farmers need to study more the economics of their business. They need to know something of what all the farmers in the country are doing and what the conditions are, and not think it sufficient to know their own acres and farm them well. Modern transportation methods make all farmers akin, and every farmer becomes at once the competitor of and cooperator with every other farmer. Above all things, let us study to prevent great scarcities as well as great surpluses.

Washington Letter

TAX REDUCTION PLANS.—Presiden Coolidge is insisting that the total estimat for federal expenditures to be submitted t the next congress shall be below $3,000,000, 000. It is now indicated that the total volum of tax returns may be cut by twelve per cen Secretary Mellon proposes a reduction of sur taxes and elimination of inheritance taxe This plan, however, will be vigorously o posed by some of the farm organization their representatives in Washington assertin that if any reduction in taxes is to be mad it should be along lines which will at least in directly give some relief to the farmers wh according to the Department of Agricultur economists, are bearing more than their shar of tax burdens.

"AN ELECTRIC STOVE IN EVER KITCHEN."—The electric cookstove is con sidered by Fru Betzy Kjelsberg of Norway t be the most effective instrument for the eman cipation of women. Fru Kjelsberg, who wa head of the Norwegian delegation of the In ternational Council of Women which met i Washington a few days ago, is proclaimin the slogan of an electric stove in every kitch en in the world. For the past five years thi has been one of the chief objectives of th Norwegian council. It is especially concerne with the electrification of the farm houses.

BIG DEMAND FOR HORSES.—There is a demand for good well bred riding horses, according to army officers who have in charge the buying of army mounts. And not only is the army finding greater difficulty in securing riding horses of the proper type, but there is a growing demand for horses for horseback riding, polo and hunting. This demand is so far above the supply, it is said, that good riding horses are bringing prices far above those of former days in this country.

FARM FOR EX-CONVICTS.—A home and farm school is to be established in West Virginia by the Prisoners' Relief Society for the benefit of ex-convicts. The farm consists of 1900 acres and everything in connection with it will be run on a self-supporting basis. Cottages are to be built for the families of convicts who are in destitute circumstances. All work on the farm will be done by ex-convicts desiring to learn a trade, and such persons are to be paid reasonable wages and be given board and working clothes. Out of 1000 former prisoners dealt with by the society, only twelve have gone back o prison, usually those who were nable to get work.

FARMERS LEAVING IRRIGATED TIONS.—What's the use of the vernment developing new reclama- ion projects in the West if the farm- rs cannot be induced to live on hem? This question is suggested by he first public statement issued by ecretary Work of the Interior De- artment since his return from a estern inspection trip. "Of the doz- n projects we visited," said Secre- ary Work, "we were primarily in- erested in the success of the older nes as an assurance that the devel- pment of new ones may be reason- bly expected. It is a cause for anxi- y, therefore, when it is found that ttlers are leaving projects and armers fail to come to take their lace. . . . The Reclamation Serv- e can build irrigation works but it an not draft settlers."

The Interior secretary is appealing states, railroads and chambers of mmerce to aid in securing settlers r the government's ready made ir- igated farms that will stick. The resent trouble appears to be that any of the settlers are in financial ifficulties.

INSTITUTE OF COOPERATION.— he American Institute of Coopera- on holds its summer session at the niversity of Pennsylvania, July 20 August fifteenth. Sales problems cooperative associations will be iscussed by many officials and man- ers of leading cooperative market- g associations. Credit problems will discussed by members of the Fed- al Farm Loan Board, bankers and her authorities on the financing of operatives. The mutual problems of operative selling organizations and mmercial distributive agencies will treated by representatives of the S. Department of Commerce. The Institute of Cooperation is a n-profit educational enterprise. It being promoted at considerable ex- nse by all the general farm organ- ations, many of the large coopera- ves, and by state departments of riculture and marketing bureaus. has the active support of the Fed- al Departments of Agricultural and mmerce.

ELIMINATING THE MIDDLE- EN.— Land O' Lakes butter, the ade-marked product of the Minne- ta Cooperative Creameries Associa- on, is meeting with a large sale in ashington, where it is the favor- e brand with the housewives. The rgest chain grocery system in ashington receives this butter in r lots direct from the association, eliminating all the jobbers r intermediate middlemen, to the dvantage of both the producer and nsumer.—T. E. Reynolds.

Harrisburg Letter

MORE MONEY THAN EVER.— hile the total can not yet be given curately indications are the State epartment of Agriculture will have ore money for the next two years an ever before and that progress as been made toward getting the partment on a firm appropriation sis whereby it will receive at least a portion of the revenue it originates. The division of the dog license revenue indicates this line. In addition the allowance for payment of indemnities for owners of cattle killed for tuberculosis is larger than ever known and the Governor has approved the bill providing $100,000 for emergency use, which will insure funds in event of outbreaks of foot and mouth disease, unforeseen invasions of insect or other pests and the like.

END OF THE LAWMAKING.—Probably a dozen and a half laws directly affecting agriculture and its allied branches and maybe a score dealing with rural life, highways, schools, public utilities and the like have been placed upon the statute books of Pennsylvania as the result of action by Governor Pinchot in the last thirty days on bills left with him by the Legislature. This is the real end of the law making period and it will take a week or so to get the record of all bills straightened out and classified so effects may be analyzed. The task of the Governor was heavy owing to the numerous bills of little importance which had to be studied; many of them were vetoed. The salary raising bills had rough sledding. The Department of Agriculture is preparing a digest of the agricultural laws which will be issued in a special bulletin while the Highway Department is getting together the numerous amendments and new acts dealing with roads. The Legislature passed over 950 bills, but the percentage of those signed is not as high as in some former years.

VEGETABLE INDUSTRY.—What is expected to be the most comprehensive survey of the vegetable industry in Pennsylvania is being worked on at the Department of Agriculture and will be issued in the form of a bulletin similar to those put out the last six months. The Department is giving special attention now to the problems of storage and results of observations and experiments made in the northern tier counties are being studied. Particular attention is also being given to the value of the products of vegetable raising industry and the distribution among consumers, a subject of much interest now because of statements as to the high share of cost due to transportation and final handling in cities.

NO AID FOR FAIRS.—As a result of failure of the legislature to place in the bill carrying the $125,000 proposed to be distributed among county fairs and similar exhibitions the next two years, the clause forbidding payment to any unless certified by the Secretary of Agriculture as free from gambling and immoral shows Governor Pinchot has vetoed the bill. The Governor's statement leaves no doubt as to why he did it. Some of the letters coming here indicate small fairs will feel loss of the subsidy. The action is the result of the movement started two years ago to inspect fairs and which led to several meetings last year.

ONLY A DOZEN OUT. — The state's first triennial farm census is now complete except for a dozen townships which have not reported, but whose books are stated to be under way. In all 1568 townships have been listed. The complete results will be issued before long and special studies on Lancaster tobacco and Lehigh potatoes have been possible due to the books being filed promptly. The census is the result of work since 1915 by L. H. Wible, chief of statistics. He tried several legislatures and in 1921 got across the bill for the census to be made on the basis of the triennial assessment.—Hamilton, Harrisburg.

New Jersey Letter

CAMDEN MARKET PLANS.—The plan advanced some weeks ago to convert the old Philadelphia and Reading Railway docks at Camden into a municipal market has gone forward rapidly, and South Jersey farmers are now able to dispose of a considerable part of their produce without crossing the Delaware River. In the past large quantities of produce have been trucked from New Jersey farms to the Philadelphia market and then have been re-sold to New Jersey dealers and disposed of at New Jersey points. As well as supplying the Camden and adjacent markets it is expected that the new plan will cut the cost of selling, with benefits to both producers and consumers. Philadelphia commission men have arranged to open branch offices in the new Camden market.

SOMERSET CONTEST OPENS.—The County Agricultural Committee in Somerset County has begun the active promotion of its 1925 program. The exhibition will take place October 24th. The projects this year include corn, vegetables, chickens and ducks, calves, girls' work including canning, dressmaking, baking, candy making, and a special boys' mechanical work department. The various farm and educational associations in the county are back of the project which promises to bring more registrants this year than any previous season.

COW TESTING INCREASES.—The growth of cow testing work in southern New Jersey has stimulated the organization of additional associations this year. The Salem-Cumberland Cow Testing Asociation, which enjoyed considerable growth and activity this last year, is going forward rapidly and plans are now under way to organize a similar association which will take in members in Salem and Gloucester Counties and another association which will embrace Cumberland and Cape May Counties. In joining the associations, the dairymen agree to continue their membership for the period of a year, thereby enabling the associations to employ a satisfactory tester and take care of the maintenance of the work.

MARKET GARDENERS' LICENSES.—Market gardeners, farmers and dealers in farm produce using New York City farmers' markets are now being compelled to take out a license issued by the New York City Department of Public Markets. This is applicable to northern New Jersey farmers who truck their produce to the Gansevoort or West Washington market. The issuing of the license is based upon the applicant proving that he is a bona fide farmer. The license fee is $1 for plates and licence and an additional $1 for a set of plates for each truck or wagon. By this licence system the Department expects to distinguish the farmer or market gardener from the farm produce dealer, who is provided for in an area immediately adjoining the farmers' market square.

MORE SOY BEANS GROWN.—A recent survey made by the New Jersey State College of Agriculture shows that interest is increasing in the growing of soy beans as a hay crop for dairy cows. Growers and dairymen have reported yields as high as two tons per acre on fairly good ground. The high feed value of the soy bean, together with the heavy yield, has made the crop popular.—B.

New York Letter

CROP PROSPECTS.—Pastures are rated as ten per cent better than at this season last year, and grass for hay about six per cent better. The carry-over of hay is larger than usual. Winter wheat promises more acres and better production than last year. Spring work is well advanced.

CANAL USED MORE.—Two of the biggest users of the barge canal are using it more freely than before, as are other manufacturers of bulky products. More boats are available, but not so many as should be in use. Economy of water shipments is well established and greater use of the canal is one of the big needs of the state in transportation rates and facilities.

BOOTLEGGERS LOSE.—The government dry forces gained the biggest victory on land and sea this week over wet influences that has been won in months. A big effort is being made to reduce the illegal consumption of liquor by shutting off the smuggling of it into New York City. Lake patrols on the northern frontier are also on the job. Prohibition has made big strides in the state despite a wet administration and in general industry has benefited greatly. Dry agitators urge less talk about violations and more about the benefits wrought by the many changes for the better.

FARMERS DIRECT STUDY OF TAXES.—Following the late disregard of the 1925 Legislature for the farmers' recommendations, the New York State Farm Bureau Federation has ordered a thoro probe of farm taxes. H. C. McKenzie, tax expert for the Federation, will head the investigation. Farmers are now paying thirty per cent of their incomes in taxes, more than any other class. They asked for a reduction of rates on general property, and instead the rates are higher than in 1923. The report will be made early enough so all farm organizations can act before the next legislature convenes.—M. G. F.

Why Strain Milk?

—with a cloth or fine mesh wire screen strainer when neither of them can possibly remove ALL the dirt from the milk? And you can't get top-notch prices for milk that is not clean.

Dr. Clark's
Purity Milk Strainer

is guaranteed to remove ALL dirt, dust, muck and other sediment from the milk—no matter how fine—or your money refunded. No other strainer made can do that.

PURITY Cotton Discs are made in any size from 5 1-2 in. to 7 in. diam., for all makes of strainers or filters. Send for a trial order.

HERE'S WHY: The Purity Strainer is fitted with a sterilized cotton pad, tightly clamped to bottom, making it necessary for milk to go THROUGH the cotton pad, which removes every particle of dirt.

Used and endorsed by Agricultural Colleges and Dairy Inspectors, Borden's, VanCamp's, Carnation, Mohawk, and Sheffield Farms Dairies.

Made in two sizes—10 quart and 18 quart. If you want clean milk, ask your dealer for the Purity Strainer, or write for circular and prices.

Purity Stamping Company
Dept. B Battle Creek, Mich.

World's Largest Manufacturers of Cotton Discs for strainers and filters.

Eureka

Traction Sprayer

Does the biggest, most necessary job in crop raising. Insures investment in crops and increases yield from 50 to 200 per cent. Eliminates bugs, mold and blight. Quickly sprays potatoes, tomatoes, garden truck, cabbage, cucumbers, pickles, tobacco, beans, sugar beets, celery, etc.

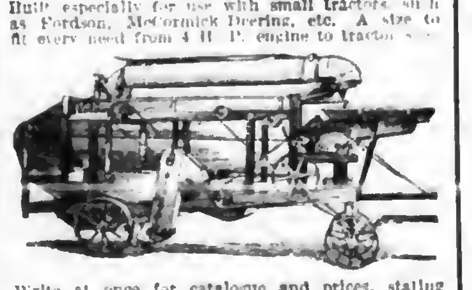
The Eureka has 1, 2 or 3 nozzles per row and 4, 6 or more rows per boom. Wheels adjustable to various width rows. 60 to 100 gal. tanks with double or triple action pumps. May be equipped for spraying orchards and bushes.

In stock near you. Write today for catalogue on Eureka Sprayers and Potato Machines

Eureka Mower Co., Box 1406 Utica, N.Y.

DOYLESTOWN UNDERSHOT THRESHER NO. 5

Built especially for use with small tractors, such as Fordson, McCormick Deering, etc. A size to fit every need from 4 H. P. engine to tractor size.



Write at once for catalogue and prices, stating what kind of a THRESHER you are interested in.
DOYLESTOWN AGRICULTURAL CO.
Established 1851 Doylestown, Pa.

The Neshaminy Gardens

(OUR FARM)

Where an Editor Works and Thinks

A READER of Pennsylvania Farmer in sending in a renewal subscription adds this postscript to his letter:

"I don't know how our Neshaminy Garden friend is going to get along without a horse, but will be interested in following his operations to see how he makes out. I think he will find Dobbin necessary in his asparagus."

Well, he is right. We have had a horse in the asparagus twice already, and also in the raspberries and potatoes.

✣ ✣ ✣

THE work a good horse can do when hitched to a one-horse cultivator and both are guided by a careful driver is hard to duplicate by any other means. We have a tractor for plowing, discing, harrowing, etc., and a small garden tractor for vegetables, but for the in-between-work we have nothing yet to take the place of a horse. However, we understand there are tractors made which will do such work. It may be we will try one out sometime, but for the present season we shall call upon "Dobbin" when there is heavy one-row work to do. It will be remembered that we did not make any hard and fast promises on this subject when we first talked about it.

✣ ✣ ✣

THE work of another person is always interesting when that person is doing work similar to our own and under similar conditions. For that reason I take the liberty of quoting at least a part of a letter from a reader in Allegheny County:

"Dear Sir:—Our farm is situated about five miles from the city line of Pittsburgh and contains twenty-seven acres. We have a good market for everything we have to sell. We are growing cabbage, tomatoes, sweet corn and other vegetables; also, such fruits as strawberries, raspberries, cherries, apples, peaches and plums. We grow enough alfalfa for three cows and two horses and sometimes have enough to sell some. Our poultry consists of eighty-five Silver-laced Wyandotte hens and they are paying very well.

I have not kept any production cost accounts, in which respect I guess I am like most farmers. However, I have kept a gross income account for the past fifteen years and it is surely worth the effort.

We have been growing strawberries more or less for the last twenty years, but less since the child labor law came into effect. I cannot get any casualty insurance on boys and girls under sixteen years of age, and when they are over that they want more than I can afford to pay at some other line of work. So, we grow only what we can handle ourselves.

I like Pennsylvania Farmer very much and get many valuable hints from it. If I can give you any information that will be of use to you at Neshaminy Gardens I shall be glad to do so.—J. A. S."

✣ ✣ ✣

WE APPRECIATE that spirit and shall be glad to avail ourselves of the offer. The letter reflects the spirit of a saving remnant in the human race. In these days when there is so much selfishness and ambition it is good to find a man who will take the time and pains to write a line of advice and encouragement to another.

✣ ✣ ✣

THE good start which vegetation made four to six weeks ago was too good to continue. In fact the fine weather was of doubtful value. The cold which followed has injured many things and retarded others. The early strawberry blossoms were killed, and when this happens it often follows that those which produce fruit are imperfect. Everything has made slow growth. We have not planted any of the sensitive crops as yet (May 11). The soil as well as the air must be warm before melons, tomatoes, beans, etc., will do any good.

✣ ✣ ✣

WE FEEL ourselves fortunate that we can plant in long rows at our place. Except the part devoted to vegetables,—where the rows are about 200 feet long,—the rows are 800 to 900 feet long. Nothing would please us better than to have these rows as straight as a line could make them, but when time is a matter to consider it is not always possible, altho people seem to expect it from one who makes more or less pretension to good farming. We were kidded by a friend the other day because some of the strawberry rows varied slightly from the straight and narrow course. The explanation that they were marked out when the soil was damp and that the heat from the sun afterwards warped them was not accepted as conclusive. Such doubting of our word hurts our sensitive souls.—R. P. K.

Measures Color of Hay

THE amount of green color present is usually the most important grading factor in hay. Other factors being equal, the hay with the best natural green color usually brings the best price, has the highest feeding value, and should be graded highest. This color has been described by such indefinite words as bright, good, fair, and poor. These terms can be variously interpreted.

Spin Hay to Find Composite Color

Recently it has been found possible to apply the Munsell color system to the measurement of color in alfalfa, and most other kinds of hay. The system is one by which every color can be definitely measured by spinning disks of known color values together and calculating the resultant color. As a mass of hay contains many shades and colors, it is also necessary to spin the hay so that the colors are merged into one blend of color which is measured by comparison with standard color disks of known color.

A machine has been devised by the United States Department of Agriculture which spins a sample of hay and Munsell color disks at the same time. A representative portion of a lot of hay is placed in the machine and spun at the rate of about 1200 revolutions per minute. Munsell color disks are placed on the same axis as the hay sample and both spun together. The color disks can be adjusted until they exactly match the composite color of the revolving hay. By this method the color of any lot of hay can be accurately measured.—U. S. D. A.

Can You Advise Him?

I WOULD like to put in new walks around my house which is a small farm house painted white. I was told cinder walks were very nice on a farm, so I dug a walk from the house to the road about six inches deep. I filled it with cinders and ashes from the hard coal I burned in my kitchen range during the winter, but when damp it tracked so that I had it all over my floors in the house. Then I was told I should use soft coal cinders. I covered this walk with some. They don't seem to pack down well and are black.

My idea was to have a firm smooth path almost white. Could some reader tell me the kind of cinders I should use to make this walk, and tell me just how it should be made, the width, depth, etc.?—W. G., New York.

Produce Imports

THE following table shows the amount of butter, eggs and dressed poultry shipped to Philadelphia from each of the principal producing states during the month of April, as reported by the Bureau of Agricultural Economics, U. S. D. A.

States	Butter (lbs.)	Eggs (cases)	Dressed Poultry (lbs.)
Alabama		618	
Arkansas		1,221	
Canada	62,250		
Delaware	3,969	5,257	5,10
Dst. of Columbia	75

THE CHEERFUL PLOWMAN

After the Weeds Again

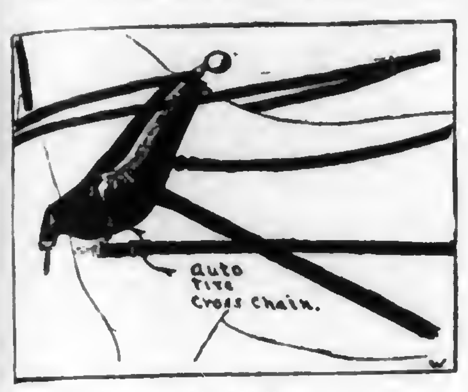
THIS time of year a fellow needs to push his fight with noxious weeds. Give them a grin, they want a smile; give them an inch, they want a mile; give them a week, upon my oath, they show a month of solid growth; a little shower, lost on the grain, inspires them to tremendous gain; an hour of sun, small good to wheat, will shoot up weeds [illegible] seven feet; a killing wind which [illegible] the heads of oats and barley all to shreds gives noxious weeds good exercise and builds them up in strength and size; a drenching rain which drowns out corn and causes spelts and rye to mourn, but causes weeds to calmly shoot into the soil a stronger root; a killing frost which injures pears and ends the apple's life and [illegible] gives hardiness and rugged strength to weeds thruout their ragged length!

They are persistent, striving things, ambitious as a ton of kings, and in spite of small inherent worth it is their aim to rule the earth; in spite of the most gruesome fact they rob the world with every act, yet they are often let alone to claim whole kingdoms as their own! Now is the time to push the fight with push and purpose, main and might! So [illegible] no slaughter or abuse, and give no quarter, give no truce; pursue them over hill and vale, in mellow field and beaten trail; don't stop the war while one remains in pasture, meadow or in grains!—J. Edw. Tufft

Handy Harness Kink

THE cross chains may be salvaged from old discarded auto tire chains and used for a good purpose.

One use for partly worn out cross chains is to hold up the side straps on the harness. One hook on the cross chain is fastened to the big ring on the hame, and the other hook to the snap in the strap.



Auto Tire Cross Chain.

The use of the chains permits quicker work in harnessing and unharnessing, and allows the breeching to be looser than it would be if the strap was fastened directly to the hame.—A. C. Wilson.

Farmers' Bulletins

THE United States Department of Agriculture has issued a number of Farmers' Bulletins bearing upon particular phases of home-building. One of the most recent is No. 1426, "Farm Plumbing." This bulletin describes and illustrates the important points entering into sound plumbing practice, and with its help those who are handy with tools can usually make their own installation of a sink, bathroom, laundry tubs, etc. The bulletin has many suggestions on the use of space in a small bathroom, the care of pipes and faucets, and the provision of a hot water supply.

Even with good plumbing the disposal of sewage is a serious problem, and in many suburban communities, individual home owners must arrange their own systems. Farmers' Bulletin No. 1227, "Sewage and Sewerage in Farm Homes" tells how this can be done in a sanitary way, and gives practical directions for constructing septic tanks.

"Plain Concrete for Farm Use," Farmers' Bulletin No. 1279, goes into the selection of materials, proportioning, mixing and placing of plain concrete. Concrete is not difficult to handle, and this bulletin enables the ordinary householder to use it in many ways.

The Heating Problem

Two Farmers' Bulletins deal with heating plants; one is No. 1174, "One-Register (Pipeless) Furnaces," the other is No. 1194, "Operating the Home Heating Plant." In the latter, several kinds of heating systems are described, with the advantages and disadvantages of each, and suggestions are made for their economical management. Farmers' Bulletin No. 1230 "Chimneys and Fireplaces" discusses a very necessary structural adjunct to any heating arrangements, and explains how more heat may be obtained from the picturesque but wasteful fireplace.

Miscellaneous Circular 189, "The Well-planned Kitchen," contains many suggestions worth considering while the home is being planned. In Farmers' Bulletin No. 1180, "Housecleaning Made Easy," will be found a description of a cleaning closet, and one should also include Farmers' Bulletin No. 1219, "Floors and Floor Coverings," which contains information on desirable ways of finishing and protecting floors in different rooms.

Any of the above bulletins may be obtained while the supply lasts by writing to the United States Department of Agriculture at Washington, D. C.

Don't let Blight Make Your Potatoes Rot

Potato bugs or blight will not worry you—if you let Calso take care of the trouble.

Calso is the most efficient treatment for potatoes, tobacco, tomatoes and all truck crops, because it gives complete protection to the growing plants.

Calso kills the bugs and controls the fungus.

It is so finely ground that it can be used either for dusting or wet spraying.

"Calso doubled my crop of potatoes, pickles, melons, etc. It takes care of flea beetles, blight and potato bugs. Show this to Bordeaux farmers. —Milton Heydt, Pa."

THE STANDARD INSECTICIDE FOR GARDEN, FIELD, AND TRUCK CROPS

To a Hampton Roof the Kind of Weather Makes No Difference

PENCO HAMPTON METAL is the greatest of all rust-resisting irons (not steel) and is made from a special formula that has proven its superiority over all others. We have made exhaustive tests for years; soil tests, acid tests, salt air tests and weather tests and know that in Hampton Metal we're offering you the best that money will buy; that is if you measure value by the number of years a roof will last.

For barns, sheds, pump and tool houses, in fact all farm buildings there is nothing else so good. It is fireproof, spark-proof and withstands the blistering sun, blustering winds, beating sleet and driving rains alike and, if properly grounded is one of the best lightning safeguards. Can be put on easily and quickly and may be had in all styles; corrugated, V-Crimp, Pressed Standing Seam, Imitation brick or stone, etc. NEEDS NO PAINT.

If there's such a thing as roofing permanently it's with Hampton Metal

You owe it to yourself to know more about how metal is made and why some is better and lasts longer than others. If you wish to include measurements of any space you'd like to cover we'll be glad to figure it and give you a price, including nails, and washers, delivered right to your station.

PENN METAL COMPANY, 25th and Wharton Sts. Philadelphia, Penna.

Send for Hampton Booklet and a sample of Hampton metal.

Farm Account Book
don't guess at your income. Start keeping a Farm Account. Then you will know just where you stand.

While the supply lasts we will furnish our paid-up subscribers with a cloth-bound Farm Account Book, sufficient in size for an 8 years' record, for the nominal sum of 50 cents. Worth $1.50. Send orders to
PENNSYLVANIA FARMER.

Asparagus Planting

Would you please send me instructions for planting asparagus. Some people say to put salt in the ground. I am sure I don't know. I have been watching your paper every week, but didn't see anything about planting it. Would thank you ever so much for some information. —Mrs. E. C. L., Bedford County, Pa.

It is a little late to plant asparagus this year, because dormant crowns would be hard to obtain at this time. The usual plan is to use one-year-old plants or crowns, setting them as early as possible in the spring in furrows a little less than plow depth. You make the furrows four feet or more apart, and set the plants about eighteen inches apart in the rows.

The plants consist of a cluster of buds and a large number of fleshy roots. These roots must be spread out carefully in the bottom of the furrow and only a few inches of earth placed over them at first. When some of the shoots have come thru, more soil is worked in, until by the end of the first year the land is level.

Manure and Fertilizer Best

It is safer to depend upon manure and commercial fertilizers for the feeding of asparagus than to use salt, altho a few growers insist that they secure better yields by applying salt. On some soils good asparagus can be grown without manure, which brings in weeds, but on clay soils the manure helps to keep the surface loose so that the shoots can get thru without being broken.

If you have good garden land that has been manured in other years, and if you can get good crowns at this time, you can start now with fair chance of success. On weedy soil and soil likely to crust, it is better to use a year to make the land right before the crowns are set, as it is difficult to make over the soil after the plants are growing.—W. C. P.

The Cover Crop

SKILLED plowmen can turn under rye six feet high so that not a spear shows above the surface, but that is no reason for letting a rye cover crop stand until it is six feet high. Sometimes press of work and rainy weather make it necessary to hold the rye until June, but the succeeding crop is seldom benefited by the delay. It may be true that there is more organic matter in the crop when six feet high than when two feet high, but unless that organic matter rots quickly in the soil it is likely to be a hindrance instead of a help to the celery or cabbage planted after it.

Plant Cover Crops in May

Drying out of the soil after heavy crops of rye plowed late is reported every year. Since late cabbage and celery are heavily handicapped in a droughty soil, it is good business to take the time to plow the rye when it is not over two or three feet high.

Experienced cabbage growers say that the time to plow cover crops for late cabbage is early May, surely not later than June first. They think it takes a month or six weeks of working the soil with harrow and roller to make it right for cabbage planting. All this working, with a few rains mixed in, helps greatly to compact the soil and bring about the prompt decay of heavy cover crops. Celery growers, those of them who use cover crops at all, think the same way as to the need for early plowing and frequent working.—W. C. P.

Lima Beans—Pole and Bush

WE ARE making use of some four-inch clay pots in which Earliana tomatoes were started to prepare hills of pole limas, filling the pots with a sandy soil mixture and setting four seeds in each pot. We hope to get at least two good plants from each pot, and will set a pot for each pole. This is not a regular practice, but has been adopted this year because of the coldness of the season, which makes the planting of limas in the field soils dangerous.

A Later Bearing Variety

Our pole limas are of the Challenger variety, which is later in bearing than the flat varieties like King of the Garden. Ordinarily anything later than King of the Garden is not to be recommended except for mild climates, but we wish to use the Challenger to supplement the crop of Fordhook bush limas, which are of much the same appearance and quality. The Fordhook is a far from reliable bearer, but we can expect somewhat better results from the Challenger. Thus there are two chances to have beans to serve the patrons that like thick, meaty beans like Fordhook.

Folks that grow plants in clay pots during the month of May know that watering is a very serious problem. Pots need watering much more frequently than plants in flats or in open soil. A four-inch pot will dry up in a few hours on a windy, warm day if exposed to both wind and sun.

To avoid some of the trouble we shall keep the pots in a shady shed until the plants show up, then set them in a deep cold frame as close together as possible. As soon as the big leaves are well opened, they will furnish enough shade to cut down the evaporation very materially. The pots cannot be left here very long, of course, because the roots might get started in the soil beneath the pots and the breaking of them at transplanting would set the plants back. The fact is, any extra heat given the bean plants will make them harder to transplant later. Only on cold nights will they have glass over them.

To Fill in Bare Spaces in Rows

Some three-inch pots that are now idle will be used to grow single bush lima plants for filling in bare spaces in the rows sown in the field. Probably those growers who have sandy, warm soil with no crusts have less trouble than we have to get a perfect stand of limas and would not think it worth while to plant any seed in pots indoors at this season

We would not think it profitable to buy pots for this purpose, or to crowd other crops for room to place these lima bean pots. With pots left over from other plantings, however, and temporarily idle frame space, the cost of this crop insurance is not great, and there is satisfaction as well as profit in having the bean rows in the field all filled up with healthy, bearing bushes.—W. C. P.

Questions on Soils and Crops

Answered by J. G. LIPMAN
Staff Contributor and Adviser

During last two months poultry manure has been covered daily with fine coal ashes, and I assume, liberally. Product has kept moist, permitting forcing thru sieve. But the usual ammonia perfume is absent, no trace of such smell. Does this situation indicate that the ammonia has fled?—O. H., Morris County, N. J.

When the proportion of sifted coal ashes is sufficiently large, when mixed with poultry manure and the entire product is kept sufficiently moist, the ammonia developed in the mixture may be in large part retained and but a small proportion may escape.

Under ordinary circumstances, the mixing of poultry manure with ashes and keeping the mixture in a moist condition would encourage the escape of a very considerable proportion of ammonia. It would appear that in your case a loss of ammonia must have occurred and that another part of it has been so changed in the mixture as to prevent its escaping.—J. G. Lipman.

Wool Waste for Orchard

Will you kindly give me any data you may have on wool waste as a fertilizer for bearing apple trees? Also the standard analysis of wool waste.—E. E. A., Burlington County, N. J.

Pure wool contains about 15 per cent of nitrogen. Wool waste contains a much lower proportion, since it is usually mixed with cotton and other materials. The range of nitrogen in wool waste may be from 2 to 10 per cent and of potash from 1 to 3 per cent. On the average, wool waste of good quality should contain 5 to 6 per cent of nitrogen.

The nitrogen in the wool waste is not readily available. Hence, relatively large amounts of the material must be used to get good results. In the case of fruit trees, excessive applications would be undesirable for there will be a tendency, under such circumstances, to force too much vegetative growth and depress the formation of the fruit buds.

Under average conditions it will be safe to use a mixture of 1500 pounds of wool waste and 500 pounds of acid phosphate. This could be applied in an apple orchard at the rate of 1500 to 2000 pounds per acre.—J. G. Lipman.

Low-Grade Fertilizer

FOR some years agricultural experiment stations and leading fertilizer manufacturers have been advising against the use of low-grade, low-analysis fertilizers. It has been pointed out time and again that low-grade and low-analysis fertilizers are relatively expensive, for their transportation and handling costs are just as high as those of the higher grade fertilizers; hence, the cost per unit of plant food in low-grade mixtures is relatively high.

Quite recently the writer received a communication from the directors of the agricultural service bureau of one of the prominent fertilizer companies. He states in his letter that his company has placed on the market a mixture containing thirty units of plant food, consisting of eighteen per cent phosphoric acid, six per cent ammonia and six per cent of potash. This will, naturally, raise the question as to the extent which fertilizer manufacturers in general are urging the use of more concentrated goods as being more economical to handle and transport.

The writer was led to inquire further concerning available information which that company may have as to how the number of units of plant food sold in the United States has changed relative to the total tonnage. Obviously, information concerning the total number of units of plant food sold in the United States taken together with the total tonnage of fertilizers consumed would give us a clearer understanding of the changes taking place both in the manufacture and use of commercial fertilizers.

Plant Food Units and Total Tonnage

The correspondence developed some interesting facts, which it may be worth while to quote. In answer to the writer's inquiry, the representative of the fertilizer company wrote:

"I do not know whether I am able to answer to your satisfaction the question you ask about the tendency of the farmer to use an increased number of units of plant food. This will depend upon location very largely. For example, Alabama now has a law which stipulates that no mixed fertilizer containing less than a total of 16 units of plant food may be sold in that state. Some other states have similar laws, and still other states are contemplating such enactment. Further, our own company has been selling for a number of years, at least 3 or 4 years, such grades as 2-12-6, 2-16-2, 4-12-4. This latter grade is getting quite a start in the cotton states. The other grades referred to are used more in the middle states. Of course, as you know, our truck centers of North Carolina and Virginia use at least around twenty total units of plant food. Such grades as 5-7-5, 4-8-7, 4-8-10 and 5-8-5 are used in very considerable quantities.

What the Future Will Bring

"As you know, it has been the tendency of agricultural college authorities to emphasize the desirability of using higher analysis goods. This proposition has also been actively pushed by the Soil Improvement Committee of the National Fertilizer Association, and from my viewpoint I believe the time is coming very fast when the bulk of fertilizers will be of high analysis. I realize that this 6-8-6 is quite an advance over ordinary grades in concentration, but I might say further that some other companies this season are selling such grades as 8-16-8, 4-24-4 and 10-12-6, by which you will see that the action in placing more concentrated fertilizer on the market is becoming more or less general."—J. G. Lipman.

Guilty of Larceny

(Senate Bill No. 1242, Act No. 259)

THE Norton bill which was recently signed by Governor Pinchot states that "if any person not being the present owner thereof shall wilfully and unlawfully steal, take or carry away, or be engaged in stealing, taking or carrying away any kind of property whatsoever, growing or being on the land of another, every such person so offending shall upon conviction thereof be guilty of larceny and be sentenced to pay a fine not exceeding five hundred dollars ($500) and to undergo imprisonment by separate or solitary confinement at labor not exceeding three years."—J.

Sometimes a married woman makes a good wife and oftener a good husband.

Kirby Poultry Farm

Making New Matings

I wish to breed White Leghorn roosters to Plymouth Rock hens. The hens have been mated with Plymouth Rock roosters. They have been separated ten days. How soon can I enter Leghorn cockerels? How long before I can gather eggs for hatching?—H. B. S., Wicomico County, Md.

To avoid the influence of previous matings and guarantee the results from the new matings, it is safest to wait three weeks from the time the old males have been removed from the flock. Hens not previously mated will produce a fair per cent of fertile eggs a week or ten days after the flock is mated up. Much depends on individual birds and there is no definite time limit which will fit all cases.—R. G. K.

House for Large Flock

Please tell me how large a house I should build to hold 200 chickens? I want to build a scratch pen in the front part of the building. How large should it be? How should the inside of the building be arranged? Should the floor be of concrete or would it be too damp?—W. G., Somerset County, Pa.

A general rule is to allow four square feet of floor space per bird so a house forty feet long and twenty feet wide will contain 800 square feet of floor space and be suitable for 200 hens. If this house is of the shed-roof type and dropping boards are used, the entire floor area is a scratching pen and no special scratching pen in front is needed.

The nests are placed on the side walls and the roosts over the dropping boards so all the straw litter on the floor under the boards is clean enough for the birds to work over while hunting for scratch grain. The roosts can be built in hinged sections allowing about a foot of roosting space per bird. Then the roosting sections can be raised and hooked to the ceiling when the boards are scraped.

Concrete Floor Is Best

A concrete floor is best as it keeps out rats and does not need repairs. Set about sixteen eight-inch iro bolts in your concrete wall so th sills can be bolted down. This wil keep the building from shifting i heavy wind storms. Build up th floor on about a foot of sand an field stone and it will not be damp. Cinders make good filling when they can be easily obtained. Paint th surface of the concrete floor wit asphalt paint and this will kee down the soil moisture and make dry floor. It gives the floor a smooth surface which is easy to sweep an disinfect with spray dope.

Write to the Division of Publications, United States Department o Agriculture, Washington, D. C., o your state experiment station a State College, for free bulletins o poultry house construction. It al pays to make brief visits to poultrymen owning good houses and what you think of the typ of hou they are using.—R. G. K.

Egg Bound Goose

I want to ask your advice about a goose that I have. A few weeks ago she was taken sick with white diarrhea and I gave her a commercial remedy and now every other day she goes on the nest and tries to lay but cannot. Will you please tell me if there is anything that can be done.—Mrs. H. D., Montgomery County, Md.

Inflammation of the egg duct o paralysis of the muscular walls may cause a bird to be egg bound. Various oviduct troubles or the development of an extra large egg might cause the condition. Allow the bird to remain quiet and the egg may eventually be laid. If this does not occur and the egg can be felt it might be dislodged by inserting the fingers covered with five per cent carbolized vaseline. It may be necessary to break the shell. Be sure to remove all bits of shell to avoi inflammation.

The exudations around the ven are often the result of the eg trouble and not due to other form of diarrhea. Egg bound cases ar usually best left to nature. Most often the egg will be expelled an the bird recover while unskilled assistance may cause serious injury t the organs.—R. G. K.

Turkey Culture on the Farm

VIGOROUS parent stock is an important factor in successful turkey culture. Care must be taken that the parent stock is not akin, for inbreeding will cause failure quicker than anything else that may be practised. Both the male and the female must be in the best of health and show strength.

Heavy gobblers must never be mated to small hens. While it is possible to secure good results from a mating of gobblers and hens of the same age for best results there should be a difference in ages. It is impossible to secure strong offspring from year-old stock birds. It is a good rule to mate two-year-old gobblers to hens of about that age.

As a vigorous gobbler will fertilize all the eggs the hen will lay that season, he will be able to take care of twenty or more hens. The man who sells off his older birds and relies on the young ones for breeding will not remain in business very long. It takes about two years to fully mature a turkey and it is at its best when three years old, and almost as good when four years of age.

In selecting the breeders the ai should be to pick out only those tha have good shape, heavy bodies, an legs that are not too long. Mos poultrymen change gobblers ever year, and the majority change thei stock birds every three years.

When Selecting the Breeders

The breeding of varieties mak little difference in the main results The Bronze, White Holland and Nar ragansett are the leading varieties The Black, Buff and Slate are more or less popular in some sections. Extremely large birds seldom breed as satisfactorily as those of medium size. But in order to maintain the desired size in the flock it is important to breed from specimens tha are above medium size. Too large birds are inactive and have surplus fat.

While the young turkeys are tender, the adults can stand considerable hardship. They keep in much better health when allowed to range over the fields and woods and pick up a very large portion of their food

They do not do well in confinement.

Turkeys are heir to all the poultry ailments, especially cholera, roup and indigestion. The latter is usually brought on by improper feeding. Give an ordinary liver pill once a day for several days, and feed on bread and milk with green vegetables such as lettuce, onions, cabbage, etc. Another good remedy for indigestion and also liver trouble, is soda and quinine. Add a teaspoonful of soda to a quart of drinking water; give a one-grain quinine pill twice a day for two or three days.

Diseases of Turkeys

When true cholera appears, the only thing to do to save the flock is to at once remove all the afflicted birds and destroy them. The remaining ones should then be removed to some other part of the farm and the place they occupied at once disinfected and cleaned up. The sick birds should have nothing but a slight grain diet for a while.

There is no cure for this ailment. Such drugs as sulphur, coperas, capsicum, alcohol and resin are advised to be given either separately or equal parts thoroly mixed together and administered in the mash food, but, unless taken in the early stages of the disease, even this will not cure.

It should always be remembered that the carcass, no matter from what cause the fowl may have died, should be either burned or buried at least four feet under the ground, so that no infection to other fowls is likely to result. There is no quicker way of spreading disease than by allowing dead bodies of infected fowls to lie about.

Young poults are sometimes lost thru rheumatism. This disease is generally due to exposure, damp roosting places, too little green food, or poorly constructed houses. There is a difference between ordinary leg weakness and rheumatism. In rheumatism the shank remains contracted and stiff, and in leg weakness it is soft.

There Is a Difference

Leg weakness is caused by a lack of muscle and bone forming material. In rheumatism the trouble is aggravated by the meat food which leg weakness needs.

Poults should not be permitted to roost, but they must have a dry place well bedded. From the beginning, at least a third of their food should consist of green stuff, clover, alfalfa, onions, dandelions, etc.

For lice on young, either a dusting of a good insect powder should be given, or a few drops of sweet oil rubbed on the head.

The following condition powder, to be given young turkeys in damp weather, is recommended: Cassia bark, one and a half ounces; ginger, [illegible] ounces, gentian, one-half ounce; anise seed, one-half ounce; carbonate of iron, two and a half ounces. Mix well together. Some use cinnamon in place of cassia bark. The dose is a teaspoonful to each pint of soft feed.

Mustn't Get Damp

Young turkeys must not be allowed to get wet. The slightest dampness is apt to be fatal. Filth will soon make short work of them. Feed only on clean surfaces. Give water in such a way that they only wet their beaks.

The delicacy of young turkeys is largely due to the rapid growth of feathers. The young turkey, unlike the chick, at once starts to put out large feathers on its wings and tail, and this heavy growth has a tendency to sap the vitality of the body, leaving it an easy prey to weakness and disease. A damp soil, such as heavy clay land, is very unsuitable for the rearing of young turkeys. A very cold, exposed situation is likewise unfit.—M. K. B.

A. A. BORLAND,
Staff Contributor and Adviser
Head of the Department of Dairy Husbandry, Pennsylvania State College

The Age at Which Heifers Should Freshen

THE age at which heifers should drop their first calves depends largely upon the breed to which they belong. However, size, vigor, and development of the individual should also be considered. Jerseys which have been well grown should usually be bred to freshen at from twenty-four to twenty-six months of age, while Guernseys are bred to drop their first calves at from twenty-five to twenty-eight months of age.

The slower maturing breeds including the Holstein, Ayrshire, and Brown Swiss should not calve before twenty-nine to thirty months of age. Some breeders believe that if the heifer calves at an early age, the tendency to produce milk will be intensified. Data secured from a study of the herd records at the Pennsylvania State College indicate that the highest milk production is usually secured from those cows which calve later rather than earlier than the average of the ages mentioned above.

Gestation has little, if any, effect upon the rate of growth of heifers. However, the rate of growth is materially checked as soon as lactation commences because of the large amount of nutrients necessary for the production of milk.

Early calving, coupled with light feeding, usually results in stunted animals. Early calving also tends toward a more rapid rate of maturity.—A. L. B.

Must Have a License

(Senate Bill No. 959, Act No. 290)

PERSONS weighing and sampling milk and cream for the purpose of determining the amount of b terfat the same as those making test, must be licensed and certi according to provisions in a Pe sylvania law just enacted. T former law enacted in 1919 provi only for certified testers.

Another Change Made

The new law provides that ev person, association, copartnership corporation engaged in the busin of buying milk or cream on the b of or in any way with reference the amount of butterfat contai shall have the sample taken eit by a licensed tester or by a pe licensed or certified to weigh sample milk and cream.

Another change in the 1919 has been made whereby every cre ery, shipping station, milk fact cheese factory, ice cream factory milk condensary or persons rece ing, buying and paying for milk cream regardless of the method settlement, is required to hold a p mit for each and every place wh milk or cream is received by wei or measure.

The Former Limitation

The former law limited this pr tice to those factories or individ which purchased on the basis of b terfat content. The present law d not apply, however, to individ buying milk or cream for private or to producers buying milk emergencies to make their reg supply or to hotels, restaura boarding houses, railroad dining or drug stores.—J.

Students Make Dairy Tour

A TIME clock in a dairy barn may be unusual but it has been found practical in the dairy barn of the Moon Company at Morrisville, Bucks County. This was but one of the many interesting features in the management of a large herd of Guernseys which Henry T. Moon brought to the attention of the dairy husbandry students from the Pennsylvania State College who were on their annual inspection trip.

The students were very much interested in the large modern dairy barn so constructed that the fire hazards are reduced to a minimum, in the sanitary milk room where the utensils are exposed to the air but protected from both flies and dust, and in the methods used to reward the men in the dairy for the production of clean milk with a low bacterial count. Last year the count was only slightly over four thousand per cubic centimeter which is much lower than the requirements for certified milk. This dairy herd is not only a paying proposition but plays an important part in maintaining the fertility of the soil of a 640-acre nursery.

Representative Ayrshires

As a representative herd of each breed was to be visited on the trip, the Glen Foerd Farm, Torresdale, was selected for Ayrshires. After judging a class of cows, an inspection of the barn and dairy was made. The method of handling the milk and the equipment used in the dairy was of special interest for this farm dairy rightfully ranks among the best to be found anywhere. Up-to-date eq ment, coupled with sanitary m ods, readily explains the popula of the Ayrshire milk "Best Babies" which is produced at Glen Foerd Farms.

Penshurst Rising Star, Glen Foe Senior herd sire, came in for share of attention, for he is the of Penshurst Marion, a French winner, owned by the Pennsylv State College. Marion has to credit a production of 14,622 pou of milk and 639.2 pounds of but fat as a senior two-year-old.

Then the Jerseys

A strong class of Jerseys was of the interesting features of visit to Erdenheim Farm, Chest Hill. After the students had pl the class, E. A. Standliot, the manager, ranked the cows acco to Jersey type and gave his rea for the placings. Several young dividuals of exceptionally good were also brought out as well as the junior and senior sires, the latter a son of Fau Prince.

More time was spent at Brentw Farm, Abington, than at the o farms visited, in order that the s ents might see W. S. [illegible] some of the entries in the Fo Brentwood National Sale as wel watch the workings of a high-auction sale.

The tops of the sale, [illegible] $12,000, and Bell [illegible] $4000, were sold during the fi of the sale while the [illegible] present.—B.

The popular wood-block design is Gold-Seal Pattern No. 556. In the 6 x 9-foot size it costs only $9.40.

GOLD SEAL CONGOLEUM GUARANTEE
SATISFACTION GUARANTEED OR YOUR MONEY BACK
REMOVE SEAL WITH DAMP CLOTH

Facsimile of Gold Seal that is pasted on the face of every guaranteed Congoleum Gold-Seal Rug.

Drudgery has no place in ~~the~~ a Congoleum kitchen—

What a lovely rug! And how much its handsome wood-block design and warm, brown tones add to the attractiveness of this cheery farm kitchen! It's one of those popular, easy-to-clean Congoleum *Gold-Seal* Rugs, which have taken the tiresome drudgery out of housekeeping for thousands of women all over the country.

Easily and Quickly Cleaned

Not only easy to clean but easy to keep clean, too! Nothing penetrates or clings to the smooth, waterproof surface. All signs of tracked-in mud and spilled things can be quickly obliterated with a few whisks of a damp mop or cloth.

Then, too, Congoleum Rugs don't have to be tacked down or cemented. Just unroll them as they come from the store, and they cling to the floor, without ever curling up at the corners or ruffling along the edges.

You can easily afford one of these popular rugs in every room in the house.

Popular Sizes—Low Prices

6 x 9 ft $9.40	Pattern No. 556 and is made in all the sizes. The other patterns are made in the five large sizes only.	1½ x 3 ft	$ .60
7½ x 9 ft 11.70		3 x 3 ft	1.[illegible]
9 x 9 ft 14.05		3 x 4½ ft	1.[illegible]
9 x 10½ ft 16.40		3 x 6 ft	2.[illegible]
9 x 12 ft 18.75			

Owing to freight rates, prices in the South and west of the Mississippi are higher than those quoted.

$100 Reward!

There is only one "Congoleum." It is manufactured by Congoleum-Nairn Inc., and identified by a Gold Seal pasted on the surface of every pattern. All "Seconds" are identified by a red label.

As the sale or representation of any other make of floor-covering as "Congoleum" is a violation of the law, we will pay $100 to any person who will secure evidence that will lead to the conviction of anyone guilty of this practice.

If you want the genuine ask for it by the registered trade-mark name "Congoleum" and look for the Gold Seal.

When hot days come - *use an oil range that sends its heat into the cooking and not into the kitchen*

Focused Heat *makes the Florence the cook stove with the hot flame*

This cut-away view shows how the blue flame of the Florence goes straight to the cooking. The heat is *focused* just where you want it for quick cooking.

HERE'S an oil range that doesn't throw its flame out in all directions—scattering its heat over the kitchen. The Florence is built on the principle of focused heat—it sends its flame, intense and concentrated, right to the bottom of the pot where it is needed.

That feature of the Florence is important all the year round because it makes your cooking quicker, better, cheaper. And it's doubly important in the hot months because it makes your kitchen a cooler place to work in, and your cooking an easier job for you.

You'll be proud of it in your kitchen

The minute you see this handsome stove you admire it and want it in your kitchen. Its sturdy, well proportioned black frame and its gleaming blue or gray enamel make the Florence the range that belongs in a beautifully equipped kitchen.

And the Florence is fully competent for any cooking or baking or roasting you ever have. For the quick, easy cooking of fresh vegetables, for the long simmering cooking of cereals, for canning, for preserving—the Florence is the stove for every meal every day, every season of the year.

It is easy to operate the Florence. Just a simple turning of a lever, and your flame is burning at any degree of heat you require. No mussy wicks to trim, no priming, no difficulty in lighting or extinguishing the flame. The Florence Leveler on each leg of the stove enables you to set the stove level if the floor is uneven; and a spirit level attached to the feed pipe shows when the adjustment is correct.

And it costs less to cook with the Florence. The heat is not wasted, because the flame is directed right where its job is. This conserves fuel, and you need less oil.

The Florence delivers to the cooking more heat in a given time from a gallon of kerosene than any other oil range.

The oven completes the stove

The Florence portable oven is as excellent as the stove. When you wish to bake or roast, simply put it on the stove, and you have a highly perfected oven for your needs. Thousands of women say that the Florence oven is the best they have ever used.

Go to your dealer, and convince yourself that this is the stove you have been looking for.

Makers of Florence Oil Ranges, Florence Ovens, Florence Water Heaters and Florence Oil Heaters
Made and Sold in Canada by McClary's, London, Canada

This is the Florence Oven, built on the principle of the Dutch oven, with the "baker's arch" to prevent air pockets. The patented heat spreader at the bottom assures even distribution of heat and guards against your roasts and baked things being underdone on top and burnt on the bottom. On the door of the oven there is heat indicator which shows how much heat there is inside for your baking and roasting.

Clear Valspar on Linoleum and Laun-Dry-Ette washing machine

Valspar-Enamel woodwork and

Make Your Laundry Cheerful and Waterproof—with Valspar

There are so many things and so many places in the laundry and kitchen that Valspar will beautify and protect: woodwork and metal work, furniture, tubs and washing machines, wooden floors, Linoleum, Congoleum, or Oil Cloth. In fact, there's no limit to Valspar's household uses.

Valspar is heat-proof, waterproof and accident-proof. Washing powders or hot, soapy water will not spot or mar it. Neither acids nor alkalies will spoil its lustre or turn it white.

Unequalled, too, for farm implements and equipment, tools, automobiles, dairy and poultry houses, incubators, brooders, and every varnish use, indoors or out.

Valspar is also made in a variety of beautiful colors—

Valspar Varnish-Stains in transparent wood colors such as Light or Dark Oak, Mahogany, Walnut, Cherry and Moss Green.

Valspar-Enamels in Red—*light and deep*, Blue—*light, medium and deep*, Green—*medium and deep*, Vermilion, Ivory, Bright Yellow, Gray and Brown. Also Black, White, Gold, Bronze, Aluminum and Flat Black.

Valspar, Valspar Varnish-Stains and Valspar-Enamels are easy to apply and dry to a bright, lustrous finish. They may be rubbed to a beautiful dull finish if desired.

Dairy Program

SHORT talks on practical subjects together with demonstrations will be featured in the dairy program for the Farmer's Field Day on Thursday, June 18, at the Pennsylvania State College.

Commencing at 8.00 A. M. steps in the production of grade B, grade A and certified milk will be discussed by W. H. Martin. This talk will be illustrated and various steps in the production of these three grades of milk will be demonstrated.

A purebred Holstein heifer calf will be given away in the judging contest which will begin at 10.00 A. M. This contest is open to all except those connected with the college.

Breeding Lessons Learned

The first talk after lunch will be given by A. A. Borland, head of the State College dairy department and staff contributor and adviser of Pennsylvania Farmer. Using animals from the college herd he will discuss many lessons learned about breeding since the establishment of the college dairy herd in 1889.

The relationship of the experimental work of the dairy department with the farmer's problems will be discussed by S. I. Bechdel at 3.30 P. M. Experimental animals will be exhibited in connection with this talk.

At 4.30 an auction sale of young dairy cattle will be held in the pavilion. This sale will include six Holsteins; four male, and two female calves, and one Ayrshire heifer calf.—A. L. B.

Serving of Milk

(Senate Bill No. 15, Act No. 52)

SENATE bill No. 15 approved March 26 by Governor Pinchot carries the following provisions relative to the serving of milk for drinking purposes in hotels, restaurants, lunch rooms and dining cars:

1. Milk for drinking purposes must be served in the bottle in which it is supplied to the eating place, it being unlawful to serve milk to patrons from a bulk supply.
2. The milk served must comply with the standards fixed by the laws of the Commonwealth.
3. The law does not prohibit the purchase of milk in bulk for uses other than for serving patrons for drinking purposes.
4. The law does not prevent the sale or serving of cream, skimmed milk or buttermilk from bulk if the same is pure and wholesome.
5. The law does not apply to the sale of mixed drinks at soda fountains.
6. Anyone violating this law is subject to a fine of not less than $25 or more than $50 or imprisonment of not less than thirty days and not more than ninety days or both.
7. The law goes into effect May 1925.—J.

Conneaut Jersey Club

COUNTY AGENT C. D. SPROUT, assisted by a committee composed of W. G. Vaughn, R. J. Ad- t, and S. W. Gehr, selected fourteen Jersey calves for the members of the recently organized Conneaut Lake Jersey Calf Club. These calves, some of which are out of former calf club animals, are from six to eight months of age and averaged $78.00 price. Many of the dams have cow testing association records, some as high as 500 pounds of butterfat and have won first or second prizes at several fairs. In the selection of these calves type as well as production of the dams was kept in mind.

The members are making plans to exhibit their calves at the Crawford County Dairyman's Field Day on June 23 and later at the roundup to be held this fall.—A. L. B.

If any product of the American soil deserves to be crowned king it is **Corn.** You grow it and so do your neighbors. You should be proud of it because corn is the backbone of our National prosperity.

The value of all our livestock is five billion dollars, but it takes several years to produce this value. A single corn crop is worth two and a half billion dollars. We get it **every year.**

The corn crop is worth a billion dollars more than wheat, oats, barley, rye, flax and rice combined—a billion dollars more than cotton—a billion more than coal—two and a half times more than all the metals taken from our mines.

No other product of the farm contributes as much to the health, wealth and happiness of all the people as corn does. Without corn we would soon starve for want of meat, milk, butter and eggs. The great packing houses would soon disappear.

This marvelous plant gives you the best of all feeds for your livestock. The finest flavored hams, bacon, milk and butter are produced with a ration in which corn and its products form the largest part.

You Should Feed

Corn Gluten Feed

23% Protein

The Part That Pays Feeders

The best part of corn for feeding is the **gluten** of the grain—**Corn Gluten Feed.** A single ton contains the gluten—the concentrated meat, milk and egg-making material—of two and a half tons of the whole grain.

When you feed Corn Gluten Feed you encourage the consumption of all products made from corn. You help yourself by earning a larger net profit on your feeding operation, and also by increasing the demand for good corn.

Corn Gluten Feed has been the standard high protein feed for thirty years. The most important feeding tests have been made with rations containing Corn Gluten Feed. It is safe—economical—digestible. The most highly convertible feed you can buy.

This great King of the American Farm deserves your loyal support. Grow better corn. Serve more corn foods on your table. Feed more Corn Gluten Feed to your livestock. You can get it from your feed dealer or any manufacturer.

If you buy a mixed feed be sure it contains the right amount of Corn Gluten Feed. The balanced ration which contains one-fourth to one-third of this famous feed, with other good materials, is always a money-maker for the man who feeds it.

OUR YOUNG PEOPLE'S FORUM.

From Forum Friends

Dear Cousin Ruth and Forum Friends:—I still live on a farm. Tomorrow is the last day of school. On Friday, Monday and Tuesday we had final examinations. I am a freshman. I hope to be a junior next year. We have about forty-five little chickens.—Mary E. Miller, Lancaster County, Pa.

Dear Cousin Ruth and Forum Friends:—Hope you are all well. I have a little cold. Oh, it seems nice to write to you friends again. Would you like to hear some riddles, well here are some:

1. How does the sailor know there is a man in the moon?
2. Why is a woman churning like a caterpillar?
3. What relation is the doormat to a scraper?
4. What is it which is lengthened by being cut at both ends?
5. Why is the letter "S" like dinner.

How do you like them, Forum Friends? What are you doing now days? I suppose getting ready for exams., aren't you? I am.

I saw in the Forum page that there is to be a contest. Do not know whether I'll try or not, think I shall. —Iva May Harrington, Chemung County, N. Y.

IN DAYS OF YORE
A. Leifels, Camden County, N. J.

Dear Cousin Ruth and Forum Friends:—I am eight years old. School closes May sixth. We are planning to have a marshmallow toast, in the afternoon a ball game, and then a short program afterwards of singing, some recitations and a few dialogues. We are inviting our parents and expect to have a fine time. I wish you were handy so you could be with us, too.

Cousin Ruth, I have such a nice teacher I know you would like her, too.

I suppose you all like birds? I do. My father made a bird house and put it up on the side of the garage and every year a bird builds in it and hatches out little birds and there is a robin building on our back porch. I like to watch the young ones when they are learning to fly.

I am very fond of candy so I am going to send you a recipe for peanut-butter candy and I hope you will all try it and it gets good for you.

2 cups sugar
½ cup milk
2 tablespoons peanut butter
½ teaspoon vanilla. — Dorothy M. Huffman, Mifflin County, Pa.

I wish I had been handy so that I could have enjoyed the fun with you on the sixth. Did you have a fine time?

COUSIN RUTH.

Dear Cousin Ruth:—How many of you are interested in ancient history? I think it is very interesting. The Egyptians, their pharaohs, tombs, and pyramids, all are very fascinating. The fierce Persians, the Greeks, the Romans and Carthaginians were all great peoples in ancient times.

And the character studies, Cleopatra the Egyptian ruler, Augustas and Julius Caesar, Cicero the orator, and many others, all form a separate source of interest.

Their works of arts, their statues, their beautiful temples, were all the fruits of hard labor.—Angemae West, Montgomery County, Pa.

Dear Cousin Ruth:—We have been having Easter vacation and I just started in school last week again. I thought I would write and tell you about the sewing club that I belong to. The name of it is Betsy Ross. I belong to the Junior Project work and like it very much.

I started this work in 1922. I have made three dresses for myself, besides many other things. I went to Ithaca last year and I had a fine time. We slept in the college dormitory and one of the girls in our bunch got lost in it and found a big gym and after a while found her way back to our room and the manager told us we could play in it and we had a fine time. I got home at twelve o'clock on Friday morning. I expect to go next year.

We are going to Silver Lake and have a camp, too, this year. Maybe you will wonder who I mean by "we." I will tell you. They are the girls in our club.

Oh, dear, I forgot to tell you about our wiener roast at Ithaca. We had it the night we got there. The college provided it for us free. We had wieners, cocoa, cabbage salad, ice cream, oranges and cookies and other dainties.

I wonder if any other states besides New York state have the Junior Project work. I feel sorry for them if they haven't for I love it. We have such fun. In 1924 our club was the champion in Wyoming County, we went to the Syracuse Fair.—Thelma Elwell, Wyoming County, N. Y.

This is a very interesting letter about your club work. You must have had lots of fun at Ithaca.

COUSIN RUTH.

Dear Cousin Ruth:—Do you have room for a little boy to join your happy circle?

My school was out on April 24 so I have to help father work. He has a tractor so it is not so hard to plow as when you have to plow with the horses.

We have six little kittens. Two of them are plain white, the others are gray and white.—John Creighton, Washington County, Pa.

Dear Cousin Ruth and Forum Friends:—I am eleven years old and live in town. I have a little brother, he is five weeks old. Here is a recipe.

HOT MILK SPONGE CAKE

2 eggs
1 cup sugar
1 tablespoonful shortening
½ cup milk
1 cup flour
1 teaspoonful baking powder
¼ teaspoonful salt
1 teaspoonful lemon extract

Beat egg whites very stiff, add yolks separately, beating well, then add sugar, continuing beating and add sifted flour, salt and baking powder. When well beaten add flavoring and one-half cup scalded milk with shortening boiled in same. Bake in loaf or layers and ice with a thin icing. Do not stir after adding milk. Bake in a moderate oven.—Helen Basehore, Dauphin County, Pa.

Dear Cousin Ruth and Forum Friends:—I am going to school in winter but am not going just now. It stopped April twenty-fourth. We had good fun the last day. We went for a hike to the supply dams. We saw a lot of snakes. Some were water snakes, some were black snakes, and some were copperhead snakes.

I go to school on a truck every morning and evening. In the winter when we had some snow drifts we went in a sleigh.

My pets are six sheep. I put them out in the field every morning and fetch them every evening. I milk three cows every evening and every morning. — Mary M. Buffenmeyer, Lebanon County, Pa.

Dear Cousin Ruth and Forum Friends:—I am a boy thirteen years old and live on a farm of about 140 acres. I do a good part of my father's plowing and get the ground ready to plant. We do a great deal of trucking. Last year I planted just a small patch of turnips, about one and one-half acres, and got about 150 bushels of dandy nice turnips and father sold them and got $1.25 for the most of them. I have four brothers and three sisters. My youngest brother is two months old and a dear little boy he is.—Charles Sunderland, Mifflin County, Pa.

WAITING FOR HIS PREY
C. Nyce, Camden County, N. J.

Dear Cousin Ruth and Forum Friends:—I am twelve years old. One of my sisters is married and has a baby two and a half years old. She and the baby come to our place nearly every day. When I come home from school he helps me hunt the eggs.

In the spring I like to go to the woods and find flowers. It was nice weather these few days. I like to help in the garden when I come home from school. In the winter I do some crocheting. I like to hear the birds singing. On the last day of school we have plenty of fun.—Vera Schmidt, Schuylkill County, Pa.

Dear Cousin Ruth and Forum Friends:—I am nine years old and live on a farm of 200 acres. We milk five cows and I milk two every milking.

Our school is closed and I can help on the farm. What I like best is to run the tractor. Two years ago father let me run the tractor to load hay and last year I ran it to load hay and also to unload it at the barn. Father will not let me take the tractor to the field to harrow. He says I am too young for that.

I have two brothers younger than myself. We have rabbits for pets. They run loose on the farm. If we call them they come and eat out of our hands. We have twelve rabbits now. We had some fifty last fall. We sold some and some we ate.—Donald W. Hay, Somerset County, Pa.

Dear Cousin Ruth:—I think whole page about clubs would just fine. How many of you For friends like to go to your grandma' I do. I go in the summer when the is no school. I can hardly wait the time comes. Last summer uncle squirted water all over with the garden hose. It wasn't fu ny, either, but he thought it was! Elmo Shreckengost, Armstrong Co ty, Pa.

OUR LITTLE FOLKS PUZZLE CORNER

Dear Little Folks:—I'll not need to tell you much about the puzzle for this week—just go right at it and go right ahead and you will find a familiar saying, provided you divide the words correctly. You will find that this saying is just as true at one time of the year as another, since it has nothing to do with any particular season. When you have solved this puzzle, send the answer to me on a POSTAL CARD so that it reaches me by May thirtieth. BE SURE TO SAY HOW OLD YOU ARE. The ten children, sending in the correct answer, whose cards are the best in grammar, spelling, punctuation, and general appearance, will each be awarded a prize. Address all replies to the PUZZLE EDITOR, PENNSYLVANIA FARMER, 261 SOUTH THIRD STREET, PHILADELPHIA.

Puzzle Prize Winners

The answer to the puzzle published in the May 2 issue of Pennsylvania Farmer is: MARCH WINDS AND APRIL SHOWERS BRING FORTH MAY FLOWERS.

The prize winners are: Ru Esther Bowman, age 13, East Ea Pa.; John Creighton, age 11, Finle ville, Pa.; Mildred Gilchrist, age Shirleysburg, Pa.; LeRoy Mart age 12, New Holland, Pa.; May Martin, age 11, Goodville, P George Morthland, age 10, Yo Pa.; Edith Paisley, age 10, Conyn ham, Pa.; Mabel Grace Walter, a 8, Gettysburg, Pa.; Ruth William age 9, Dover, Del.; Harry K. W mer, age 9, Bird-in-Hand, Pa.

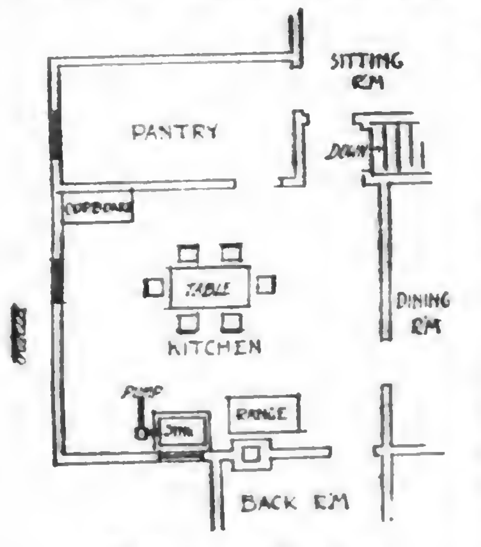
Making Over the Kitchen

Our Architect Answers a Query from His Mail Bag

DEAR EDITORS:—Will you please plan my kitchen and pantry for me? My kitchen is very cold in the winter, so our table (for we eat in the kitchen, winters) must be near the range. There are six of us, and my floor from the back door to the cellar door is usually set full of boots, shoes and arctics. There are always more coats and caps than the few hooks back of the kitchen door will hold.



The present kitchen.

Two members of the family are hunters and the kitchen is the place where their shotguns, rifles and ammunition are kept. The northwest corner of the kitchen is very dark.

Some time we hope to put in a bathroom, and the pantry is the only room I can spare. I want stationary wash tubs put in also. It has always been my idea to put cupboards in my kitchen, but I cannot seem to think out any arrangement so things would be handy and look anywhere near neat.

The Back Room

The back room has a cement floor, but is not built tight to the house, so the snow and rain always blow in. It has a shed roof and the rafters come below the kitchen door, making it almost impossible to keep flies out in the summer.

Any or all of the furniture in the kitchen can be changed, even the sink, as it only stands on legs and is not connected with a drain. The cistern wall has fallen in, so the pump is not working. But I hope to get the cistern rebuilt this summer.

There will be very little money this year to work with. But as there are two handy, able-bodied men about, I expect to get them interested enough to do the necessary carpenter work. But first I must know what I want. I have thought long and hard, and am no nearer an idea than at first. Won't you help me?—A Farm Woman.

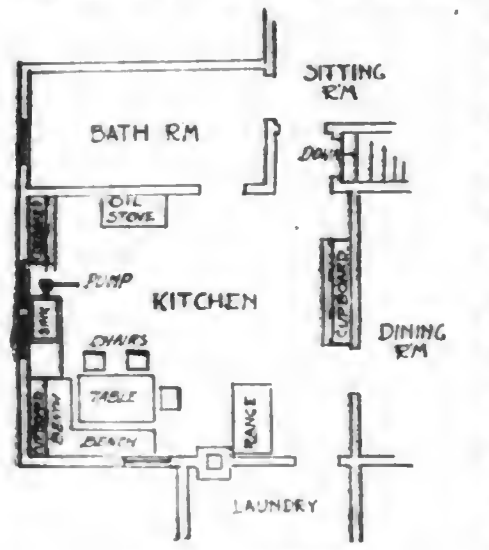
First of all, we must get those guns, coats, boots and so on, out of the kitchen

To do this, we shall have to give the men another, and better, place for their things. So we will interest them in rebuilding that back room, making it weather-tight, perhaps raising the roof, and so on. If it is cold, we will line it with sheets of pasteboard from paper cartons; covering the joints with plastering laths. Then we will whitewash or kalsomine the whole thing, making it very neat and attractive. A little laundry stove will make the place comfortable in wintertime; and I'm sure the men will like it much better than the kitchen.

Hooks and Shelves Needed

Of course, there must be plenty of hooks for coats, hats and guns; shelves for ammunition; other shelves (or perhaps box seats) for boots and rubbers.

In one corner we will put stationary wash tubs, so that the place can be used as a laundry. The men can wash their hands and faces at these tubs, thus making themselves independent of the kitchen sink.



After changes.

First of all we will put in another window, on the north side, close to the present window. Under these we will set the sink with drain board at the left and pump at the right.

Next we will build in three cupboards as shown on the plan, two running down to the floor, but the third one (in the northwest corner) stopping about three feet above the floor.

Will Put in Some Benches

In front of this last cupboard we will build a bench. Another bench joins this, as I have shown. The table is drawn up to these benches, and three persons sit on them; the other three sit on chairs. This gives a sort of breakfast nook effect, cozy and comfortable. Moreover, it does away with three chairs, which are usually very much in the way, between meals.

If possible, we will make the kitchen warmer by lining it with pasteboard, like the back room.

I have not shown any fixtures in the bathroom, because your plumber, when he comes to put them in, will arrange them so as to save as much pipe as possible.—W. D. B.

Save Plumbing Bills

MANY a plumber bill could be saved if the housekeeper would be more careful about the various house drains.

No coffee pot should be given a rinsing at the kitchen sink, not even after the grounds have been emptied. The grounds which do cling to the sides and may not seem to amount to much, accumulate into considerable when gathered in the traps. Get the habit of giving the pot two rinsings before actually washing it.

Wipe all greasy pans and dishes with soft paper before putting into the water. The tissue paper which comes wrapped around oranges, lemons and grapefruit or as lining for suit boxes or packing from the city stores, should be kept in a bag hanging near the sink and used for this purpose.

Hair Quickly Clogs Pipes

Be careful of small bits of soap, small enough to pass thru the drain, especially in the bathroom. Try to have the family careful of threads, hair and bits of dust. Men should not rinse the shaving brush in the bowl, even these short hairs gather into nests in the pipe. The girls should take extra care when shampooing to see that loose hair is not left to be carried down with the water as these long strands will clog up the pipes very quickly. See that whoever does the upstairs cleaning, does not dampen the broom in the tub (many people do) or use the bowl instead of a bucket for scrubbing. A great deal of lint gets down the pipes this way.

It is not always necessary to call a plumber when the faucets drip. Probably they only need a washer which any woman can put on with the aid of a wrench, cutting them, if necessary, from pieces of leather or rubber about the place. Turn off the water and go ahead and count the work your gain.

The Best Preventive

But the greatest preventive for drain troubles, is to wash the pipes of kitchen sink, bathroom lavatory and bowl and the laundry tubs once every month with a gallon of boiling water poured over two pounds of washing soda. A plumber once suggested this and explained that it eats away grease and keeps the pipes open for free drainage.—E. M. P.

Choose with Care

THE woman of angular type, the one with prominent bones above the eyes, and prominent, square jawbones, should try to make her face appear round and more like the average.

The woman of angular type should avoid severely tailored effects. Soft lines are more becoming.

The hat which she selects should be one that has soft lines. The material which covers the hat may be draped so that it will lend a soft effect or this softness may be secured by the trimming. The shape of the hat selected should vary according to the length or width of the face. Hats with square-topped crowns emphasize the angular lines and have a tendency to make the wearer appear older. Bows and trimmings that have angular lines, and all severely tailored effects, should be avoided. The angular face looks better when furs are worn because they make a soft frame for the face.

Straight lines and all angular appearances should be avoided in dressing her hair. The hair should be dressed round and soft about the face, and brought down over the top of the ears. Usually this type of woman should wear her hair coiled softly on the back of her head, but the length of her neck determines whether the coil should be placed high or low.

The Neckline Important, Too

A square neck is very unbecoming to the angular face as it emphasizes the lines and angles of the face. The V-neck, with its sharp point, is also unbecoming. A deep curve is usually best. The neckline, however, should be curved to contradict the general contour of the face. For example, the narrow, deep, oval neckline is becoming to the broad, angular face. Many times, however, it is wise to detract attention from the neckline. This may be done by softening it with bead designs, decorative stitches, lace trim, fur trim, etc., but always in curved and broken lines. All angular lines should be avoided, regardless of fashion.—S. P.

A Dual Purpose Recipe

½ cup sugar
½ cup molasses
½ cup milk
½ cup shortening
1 egg
1 teaspoon, each, salt, ginger, cinnamon
½ teaspoon, each, cloves, soda, baking powder
1½ cups flour

Cream sugar and shortening, add well beaten egg, molasses, milk, and the dry ingredients mixed and sifted together. This makes a [illegible]-flavored cake. It is nice for a layer cake or a square loaf. Baked in a flat tin and cut in squares it makes a nice pudding if a sauce is made to pour over it.—Mrs. E. M. C.

If You Want Extra Hours

Plan Your Work and Don't Do Needless Things

WE IMAGINE that if we just had an extra hour a day we should o great things. But would we? Vouldn't we get just as far behind if e had more hours at our disposal?

If we really want two hours a day xtra, we can have them by simply ing at our regular work intelliently. I think it helps wonderfully o write out our plans for a day or eek. Even when we know positive- that we can't live up to our schede, our written plan gives us someing definite to live up to.

On a farm it is almost impossible live by a set schedule. Weather, bies, chickens, stock and all the st do their level best to make us ange our plans. But that's what akes life interesting.

Some Tasks Are Needless

When making plans, we might ssify our tasks as "daily," "week-" "monthly." Also we might ssify as "needless" such things as iping dishes, ironing towels, etc.

Plan so you don't tire yourself to ath one day and loaf the next. If ible, finish a given job and reore all traces of what you were dog. Be orderly. By rearranging ur equipment and putting it in d order you can surely save time. n't make two trips when one will .

Don't be a shock absorber for the ole family. The rest are as able died as you. Let each one be reosible for certain things. Do you your eight hours of work, eight urs of sleep and eight hours of y? Or do you merely fritter away e?

Some days you accomplish so much re than others. Why is it? What s the incentive? Study your own situation, and if you really want two hours daily, you can have them. Possibly not at a stretch every day, but a few minutes at a time. How will you use them?

What Speeds You Up?

There is an excellent book, "The Use of the Margin" (by Griggs, I think) that we should all read over and over. If you want extra time badly enough to work for it, you no doubt know what you want to use it for. I suggest that you cultivate whatever talents you possess. There is no telling what heights it may lead you to. "For unto him that hath, shall be given." And "to have" means to use.—Mrs. C. C. B.

BANANA PIE

½ cup sugar
3 level tablespoons flour
⅛ teaspoon salt
2 eggs
1½ cups scalded milk
2 medium sized bananas
1 tablespoon lemon juice
½ cup cream
4 tablespoons powdered sugar (for meringue)

Beat yolks of eggs slightly, stir in the half cup of sugar, the flour and salt (mixed and sifted), add the scalded milk slowly stirring constantly to keep the mixture smooth. Cook in double boiler fifteen minutes. Cool, add cream and lemon juice. Peel bananas, cut fine and add to custard. Pour this filling into baked pastry shells. Beat egg whites till stiff, add powdered sugar, beat again, spread over pie, and put into oven until the merinque is delicately browned.—Mrs. H. W. B.

Easily and Quickly Made

Directions for Ordering.—Give figures d letters of each pattern exactly as ated at beginning of each description. re bust measures when ordering waist tterns, waist measure for skirt, and e for children's patterns. Address nsylvania Farmer, 261 S. Third reet, Philadelphia, Pa.

8.—For Morning Wear.—In printed e or figured percale this model will eat and attractive. The lines are comable and becoming. Seven sizes: 36, 0, 42, 44, 46 and 48 inches bust meas. A 38-inch size requires 4½ yards of ch material. The width at the foot wo yards with plaits extended. Pat. 10 cents.

4-5121.—A Smart Two-piece Dress.—piece dresses are among the favorstyles of the season. As portrayed style is in green and white checked silk with binding of white crepe de

e Blouse, 5094, is in 7 sizes: 34, 36, 42, 44 and 46 inches bust measure. t, 5121, is in 4 sizes: small, 34-36; um, 38-40; large, 42-44; extra large, inches bust measure. To make this s for a medium size will require 6½ s for skirt and blouse of 40-inch mal and 1½ yard of lining for bodice. separate patterns, each 10 cents.

.—For the Small Boy.—Linen, rep flannel are serviceable materials for ments of this kind. In this model the front is shaped over the right. The may be in wrist or elbow length. e sizes 2, 4 and 6 years. A 4-year requires 1¾ yard of 36-inch material. ern, 10 cents.

4.—Cool and Comfortable.—Linen, printed voile, pongee or percale could be used for this model. Three sizes: 2, 4 and 6 years. To make this model for a 6-year size requires 2¾ yards of 32-inch material. Pattern, 10 cents.

5111.—A Pretty Night Dress.—This dainty model is good for crepe, crepe de chine, batiste or silk. The trimming may be of lace, embroidery or stitchery. Four sizes: small, 34-36; medium, 38-40; large,

Discovered!
A *liquid* floor covering
-applied with a brush
Oil; Grease-*and* Waterproof
Resists hardest wear
Easiest to clean
for any floor: WOOD OR CEMENT INSIDE OR OUTSIDE

KOVERFLOR is entirely different from anything you have ever used.

It beautifies and protects all floors, creating a fresh, wholesome surface—tile-like in appearance—which is easily cleaned with a mop. It resists the most rugged wear and tear and is impervious to water, weather, oil and grease.

It prevents the elements of decay from attacking the flooring material. If your cement floors dust, Koverflor will stop it. It will also enhance their beauty and add to their value.

Koverflor is supplied in solid colors for any floor—wood or cement—inside or outside. Ideal for the porch. Also for cellars, garages, factories, stores, industrial and commercial buildings, steamships, yachts, boats, etc. Particularly effective for old floors.

Economical. Easily applied with a brush—just like paint. Hardware and paint dealers sell it. If unable to obtain it conveniently, we will supply it direct.

MY HORSE, impatient as ever to find the end of the road, hurried me along and in a moment we were down under the pine grove that surrounded the house of old Squire Fullerton—a big, stone house with a graveled road around it. A great black dog came barking and growling at me from the front porch. I rode around the house and he followed. Beyond the windows I could see the gleam of candlelight and moving figures. A man came out of the back door as I neared it.

"Who's there?" he demanded.

"My name is Barton Baynes from St. Lawrence County. Kate Fullerton is my friend and I wish to see her."

"Come up to the steps, sor. Don't git off yer horse—'til I've chained the dog. Kate'll be out in a minute."

He chained the dog to the hitching post and as he did so a loud, long wailing cry broke the silence of the house. It put me in mind of the complaint of the damned which I remembered hearing the minister describe years before at the little schoolhouse in Lickitysplit. How it harrowed me!

The man went into the house. Soon he came out of the door with a lighted candle in his hand, a woman following. How vividly I remember the little murmur of delight that came from her lips when he held the candle so that its light fell upon my face! I jumped off my horse and gave the reins to the man and put my arms around the poor woman, whom I loved for her sorrows and for my debt to her, and rained kisses upon her withered cheek. Oh God! what a moment it was for both of us!

The way she held me to her breast and patted my shoulder and said "my boy!"—in a low, faint, treble voice so like that of a child—it is one of the best memories that I take with me into the new life now so near, from which there is no returning.

"'My boy!'" Did it mean that she had appointed me to be a kind of proxy for the one she had lost and that she had given to me the affection which God had stored in her heart for him? Of that, I know only what may be conveyed by strong but unspoken assurance.

She led me into the house. She looked very neat now—in a black gown over which was a spotless white apron and collar of lace—and much more slender than when I had seen her last. She took me into a large room in the front of the house with a carpet and furniture, handsome once but now worn and decrepit. Old, time-stained engravings of scenes from the Bible, framed in wood, hung on the walls.

She gave me a chair by the candlestand and sat near me and looked into my face with a smile of satisfaction. In a moment she pointed toward the west with that forefinger, which in my presence had cut down her enemy, and whispered the one word:

"News?"

I told all that I had heard from home and of my life in Cobleskill but observed, presently, a faraway look in her eyes and judged that she was not hearing me. Again she whispered:

"Sally?"

"She has been at school in Albany for a year," I said. "She is at home now and I am going to see her."

"You love Sally?" she whispered.

"Better than I love my life."

Again she whispered: "Get married!"

"We hope to in 1844. I have agreed to meet her by the big pine tree on the river bank at eleven o'clock the third day of June, 1844. We are looking forward to that day."

A KIND of shadow seemed to come out of her spirit and rest upon her face and for a moment she looked very solemn. I suppose that she divined the meaning of all that. She shook her head and whispered:

"Money thirst!"

A tall, slim woman entered the room then and said that supper was ready. Kate rose with a smile and I followed her into the dining-room where two tables were spread. One had certain dishes on it and a white cover, frayed and worn. She led me to the other table which was neatly covered with snowy linen. The tall woman served a supper on deep, blue china, cooked as only they could cook in old New England. Meanwhile I could hear the voice of the aged squire—a weird, empty, inhuman voice it was, utterly cut off from his intelligence. It came out of the troubled depths of his misery.

So that house—the scene of his great sin which would presently lie down with him in the dust—was flooded, a hundred times a day, by the unhappy spirit of its master. In the dead of the night I heard its despair echoing thru the silent chambers.

Kate said little as we ate, or as we sat together in the shabby, great room after supper, but she seemed to enjoy my talk and I went into the details of my personal history. How those years of suffering and silence had warped her soul and body in a way of speaking! They were a poor fit in any company now. Her tongue had lost its taste for speech I doubt not; her voice was gone, altho I had heard a low plaintive murmur in the words "my boy."

The look of her face, even while I was speaking, indicated that her thoughts wandered, restlessly, in the gloomy desert of her past. I thought of that gay bird-like youth of hers of which the old man with the scythe had told me and wondered. As I was thinking of this there came a cry from the aged squire so loud and doleful that it startled me and I turned and looked toward the open door.

Kate rose and came to my side and leaning toward my ear whispered:

"It is my father. He is always thinking of when I was a girl. He wants me."

She bade me good night and left the room. Doubtless it was the outraged, departed spirit of that golden time which was haunting the old squire. A Bible lay on the table near me and I sat reading it for an hour or so. A tall clock in a corner solemnly tolled the hour of nine. In came the tall woman and asked in the brogue of the Irish:

"Would ye like to go to bed?"

"Yes, I am tired."

She took a candle and led me up a broad oaken stairway and into a room of the most generous proportions. A big four-post bedstead, draped in white, stood against the wall. The bed, sheeted in old linen, had quilted covers. The room was noticeably clean; its furniture of old mahogany and its carpet comparatively unworn.

When I was undressed I dreaded to put out the candle. For the first time in years I had a kind of childfear of the night. But I went to bed at last and slept rather fitfully, waking often when the cries of the old squire came flooding thru the walls. How I longed for the light of morning! It came at last and I rose and dressed and seeing the hired man in the yard, went out-of-doors. He was a good-natured Irishman.

"I'm glad o' the sight o' ye this fine mornin'," said he. "It's a pleasure to see any one that has all their senses—sure it is."

I WENT with him to the stable yard where he did his milking and talked of his long service with the squire.

"We was glad when he wrote for Kate to come," he said. "But, sure, I don't think it's done him any good. He's gone wild since she got here. He was always fond o' his family spite o' all they say. Did ye see the second table in the dinin'-room? Sure, that's stood there ever since his first wife et her last meal on it, as it was then, sor—the same cloth, the same dishes, the same sugar in the bowl, the same pickles in the jar. He was like one o' them big rocks in the field there—ye couldn't move him when he put his foot down."

Kate met me at the door when I went back into the house and kissed my cheek and again I heard those half-spoken words, "My boy." I ate my breakfast with her and when I was about to get into my saddle at the door I gave her a hug and, as she tenderly patted my cheek, a smile lighted her countenance so that it seemed to shine upon me. I have never forgotten its serenity and sweetness.

I journeyed to Canton in the midst of the haying season. After the long stretches of forest road we hurried along between fragrant fields of drying hay. At each tavern we first entered the barroom where the landlord—always a well-dressed man of much dignity and filled with the news of the time, that being a part of his entertainment—received us with cheerful words. His housekeeper was there and assigned our quarters for the night. Our evenings were spent playing cards or backgammon or listening to the chatter of our host by the fireside. At our last stop on the road I opened my trunk and put on my best suit of clothes.

WE REACHED Canton at six in the evening of a beautiful summer day. I went at once to call upon the Dunkelbergs and learned from a man at work in the dooryard that they had gone away for the summer. How keen was my disappointment! I went to the tavern and got my supper and then went to Ashery Lane to see Michael Hacket and his family. I found the schoolmaster playing his violin.

"Now God be praised—here is Bart!" he exclaimed as he put down his instrument and took my hand in his. "I've heard, my boy, how bravely ye've weathered the capes an' I'm proud o' ye—that I am!"

I wondered what he meant for a second and then asked:

"How go these days with you?"

"Swift as the weaver's shuttle," he answered. "Sit you down, while I call the family. They're out in the kitchen putting the dishes away. Many hands make light labor."

They came quickly and gathered about me—a noisy, happy group. The younger children kissed me and sat on my knees and gave me the small news of the neighborhood.

How good were the looks of those friendly faces and the full-hearted pleasure of the whole family at my coming!

"What a joy for the spare room!" exclaimed the schoolmaster. "Sure I wouldn't wonder if the old bed was dancin' on its four legs this very minute."

"I intend to walk up to the hills tonight," I said.

"Up the hills!" he exclaimed merrily. "An' the Hackets lyin' awake thinkin' o' ye on the dark road! Try it, boy, an' ye'll get a crack with the ruler and an hour after school. Yer aunt and uncle will be stronger to stand yer comin' with the night's rest upon them. Ye wouldn't be routin' them out o' bed an' they after a hard day with the hayin'! Then, my kind-hearted lad, ye must give a thought to Michael Henry. He's still alive an' stronger than ever—thank God!"

So, altho I longed for those more dear to me up in the hills, I spent the night with the Hackets and the schoolmaster and I sat an hour together after the family had gone to bed.

"How are the Dunkelbergs?" I asked.

"Sunk in the soft embrace o' luxury," he answered. "Grimshaw made him. Grimshaw liked him. He was always ready to lick the boots o' Grimshaw. It turned out that Grimshaw left him an annuity of three thousand dollars, which he can enjoy as long as he observes one condition."

"What is that?"

"He must not let his daughter marry one Barton Baynes, late o' the town o' Ballybeen. How is that for spite, my boy? They say it's written down in the will."

I THINK that he must have seen the flame of color playing on my face, for he quickly added:

"Don't worry, lad. The will o' God is greater than the will o' Grimshaw. He made you two for each other and she will be true to ye, as true as the needle to the north star."

"Do you think so?"

"Sure I do. Didn't she as much as tell me that here in this room—not a week ago? She loves ye, boy, as true as God loves ye, an' she's a girl of a thousand.

"Her father is a bit too fond o' money. I've never been hard struck with him. It has always seemed to me that he was afflicted with perfection—a camellia man!—so invariably neat and proper and conventional! Such precise and wearisome rectitude! What a relief it would be to see him in his shirt-sleeves or with soiled boots or linen or to hear him say something—well—unexpected! Six shillings a week to the church and four to charity, as if that were the contract—no more, no less! But did ye ever hear o' his going out o' his way to do a good thing—say to help a poor woman left with a lot o' babies or a poor lad that wants to go to school? 'No, I'm very sorry, but I give four shillings a week to charity and that's all I can afford.'"

"Why did they go away? Was it because I was coming?"

"I think it likely, my fine lad. The man heard o' it some way—perhaps thru yer uncle. He's crazy for the money, but he'll get over that. Leave him to me. I've a fine course o' instruction ready for my Lord o' Dunkelberg."

"I think I shall go and try to find her," I said.

"I am to counsel ye about that," said the schoolmaster. "She's as keen as a brier—the fox! She says, 'Keep away. Don't alarm him, or he'll bundle us off to Europe for two or three years.'

"So there's the trail ye travel, my boy. It's the one that keeps away. Don't let him think ye've anything up the sleeve o' yer mind. Ye know, lad, I believe Sally's mother has hold o' the same rope with her and when two clever women get their wits together the divvle scratches his head. It's an old sayin', lad, an' don't ye go out an' cut the rope. Keep yer head cool an' yer heart warm and go right on with yer business. I like the whole plan o' this remarkable courtship o' yours."

"I guess you like it better than I do," was my answer.

"Ah, my lad, I know the heart o' youth! Ye'd like to be puttin' yer arms around her—wouldn't ye, now? Sure, there's time enough! You two young colts are bein' broke' an' bitted. Ye've a chance now to show yer quality—yer faith, yer loyalty, yer cleverness. If either one o' ye fails that one isn't worthy o' the other. Ye're in the old treadmill o' God—the both o' ye! Ye're bein' weighed an' tried for the great prize. It's not pleasant, but it's better so. Go on, now, an' do yer best an' whatever comes take it like a man."

A little silence followed. He broke it with these words:

"Ye're done with that business in Cobleskill, an' I'm glad. Ye didn't know ye were bein' tried there—did ye? Ye've stood it like a man. What will ye be doin' now?"

"I'd like to go to Washington with the Senator."

He laughed heartily.

"I was hopin' ye'd say that," he went on. "Well, boy, I think it can be arranged. I'll see the Senator as soon as ever he comes an' I believe he'll be glad to know o' yer wishes. I think he's been hopin', like, that ye would propose it. Go up to the farm and spend a happy month or two with yer aunt an' uncle. It'll do ye good. Ye've been growin' plump down there. Go an' melt it off in the fields."

"How is Deacon Binks?" I asked presently.

"Soul buried in fat! The sparkler on his bosom suggests a tombstone stickin' out of a soiled snowbank."

A little more talk and we were off to bed with our candles.

Next morning I went down into the main street of the village before leaving for home. I wanted to see how it looked and, to be quite frank, I wanted some of the people of Canton to see how I looked, for my clothes were of the best cloth and cut in the latest fashion. Many stopped me and shook my hand—men and women who had never noticed me before, but there was a quality in their smiles that I didn't quite enjoy. I know now that they thought me a little too grand on the outside. What a stern-souled lot those Yankees were! "All ain't gold that glitters." How often I had heard that version of the old motto!

"Why, you look like the Senator when he is just gittin' home from the capital," said Mr. Jenison.

They were not yet willing to take me at the par of my appearance.

I met Betsy Price—one of my schoolmates—on the street. She was very cordial and told me that the Dunkelbergs had gone to Saratoga.

"I got a letter from Sally this morning," Betsy went on. "She said that young Mr. Latour was at the same hotel and that he and her father were good friends."

I WONDER if she really enjoyed sticking this thorn into my flesh—a thorn which made it difficult for me to follow the advice of the schoolmaster and robbed me of the little peace I might have enjoyed. My faith in Sally wavered up and down until it settled at its wonted level and reassured me.

It was a perfect summer morning and I enjoyed my walk over the familiar road and up into the hill country. The birds seemed to sing a welcome to me. Men and boys I had known waved their hats in the hay-fields and looked at me. There are few pleasures in this world like that of a boy getting home after a long absence. My heart beat fast when I saw the house and my uncle and Purvis coming in from the twenty-acre lot with a load of hay. Aunt Deel stood on the front steps looking down the road. Now and then her waving handkerchief went to her eyes. Uncle Peabody came down the standard of his load and walked toward me.

"Say, stranger, have you seen anything of a feller by the name o' Bart Baynes?" he demanded.

"Have you?" I asked.

"No, sir, I ain't. Gosh a'mighty! Say! what have ye done with that boy of our'n?"

"What have you done to our house?" I asked again.

"Built on an addition."

"That's what I've done to your boy," I answered.

"Thunder an' lightnin'! How you've raised the roof!" he exclaimed as he grabbed my satchel. "Dressed like a statesman an' bigger'n a bullmoose. I can't 'rastle with you no more. But, say, I'll run ye a race. I can beat ye an' carry the satchel, too."

We ran pell-mell up the lane to the steps like a pair of children.

AUNT DEEL did not speak. She put her arms around me and laid her old head upon my breast. Uncle Peabody turned away. Then what a silence! Off in the edge of the woodland I heard the fairy flute of a wood-thrush.

"Purvis, you drive that load on the floor an' put up the hosses," Uncle Peabody shouted in a moment. "If you don't like it you can hire 'nother man. I won't do no more till after dinner. This slave business is played out."

"All right," Purvis answered.

"You bet it's all right. I'm fer abolition an' I've stood your domineerin', nigger-driver ways long enough fer one mornin'. If you don't like it you can look for another man."

Aunt Deel and I began to laugh at this good-natured, make-believe scolding of Uncle Peabody and the emotional strain was over. They led me into the house where a delightful surprise awaited me, for the rooms had been decorated with balsam boughs and sweet ferns. A glowing mass of violets, framed in moss, occupied the center of the table. The house was filled with the odors of the forest, which, as they knew, were dear to me. I had written that they might expect me some time before noon, but I had begged them not to meet me in Canton, as I wished to walk home after my long ride. So they were ready for me.

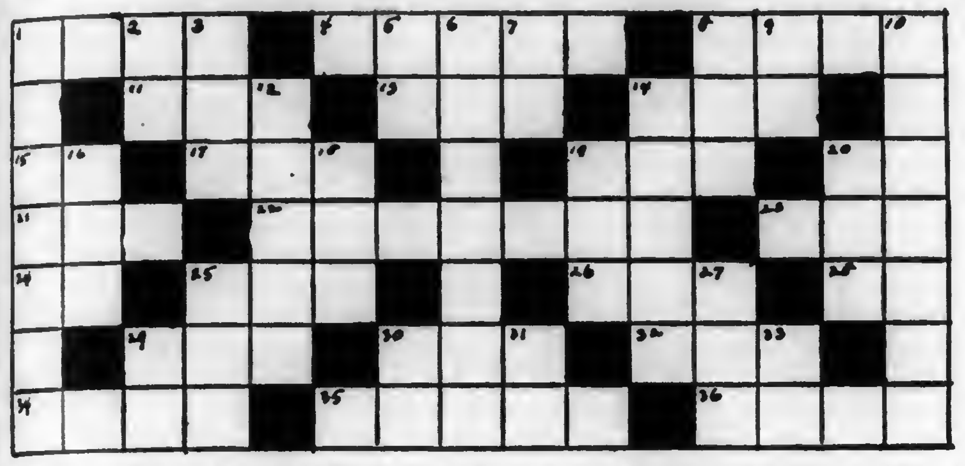
Our Weekly Cross Word Puzzle



TO SOLVE this puzzle, fill in the white squares with letters forming the words defined in the list below. For example: 19 (across) is PLY and 12 (down) is TRILL. You may begin anywhere in the puzzle. Follow the definitions carefully and, by noting letters common to two words, you will soon have a clew to help you. The solution of this puzzle will appear in an early issue.

READING DOWN

1. To cover the ground again.

Did you ever hear this one?—

The fancy prices charged in some New York stores daze the out-of-town visitor.

Some fine red apples displayed in a shop off Broadway caught the eye of a man from the apple-growing state of Washington and he thought he'd buy a couple to munch as he strolled along.

"Gimme two of those," he said to the clerk, holding out a $5 bill. "How much are they?"

The clerk thought he knew a hick when he saw one.

"Two dollars apiece," he said, quickly producing the dollar change.

"Just keep the dollar, son, and we'll be square," said the stranger. "I stepped on a grape coming in."—Oil Pull Magazine.

An elderly gentleman who had never seen a football game was persuaded by a young enthusiast to attend one of the gridiron contests.

"Now," said the young fellow as the game was about to start, "you will see more excitement for a couple of dollars than you ever saw before."

"I have my doubts about that," replied the elderly gentleman. "That's all my marriage license cost me.

"My husband gave up fishing when he joined the church."

"But fishing isn't sinful."

"No, but lying is."—Boston Transcript.

Rastus—Wheah you-all bin?

Finney—Lookin' foah work.

"Mah man! Yo' cu'osity's gonna git yo' in trouble yit!"

Markets

PHILADELPHIA MARKETS

May 18, 1925.

Hogs—Receipts, 1020 head; market irregular; light to medium weights, $12.50@13; pigs, $12@12.25; heavy hogs, $12.00.

HAY AND GRAIN

Feed—Quotations were as follows: City bran, $36; middling, $38, in 100-lb sacks; red dog, $49, nominal, in 100-lb sacks; western spring bran, prompt shipment, $35.75; standard middling, $37.50; flour middling, $43@43.50; red dog, spot, $49@51, all in 100-lb sacks, all-rail and lake-and-rail shipments; rye, middling, $36; white hominy feed, $44.85, all in 100-lb sacks; cottonseed meal, 36 per cent protein, $44.25; linseed oil meal, $47.80, in 100-lb sacks.

Hay and Straw—Hay, timothy and light mixed, No 1, $25@26; No 2, $23@24; No 3, $20@21; sample, $10@18. Straw, large bales, rye, $15@17.

Grain—WHEAT, No 2 red, c i f, dom, $2.13½; No 1 dark spring, c i f, dom, $1.83⅜; No 2 hard winter, f o b, export, $1.85; No 1 North Manitoba, in bond, f o b, export, $2.00¼; No 2 mixed durum, f o b, export, $1.71½. CORN, No 2 yellow, $1.34⅜; No 3 yellow, $1.31⅛; No 2 mixed, $1.24. OATS, No 2 white, 55½c; No 3 white, 53½c; No 4 white, 52½c; ordinary white, clipped, 59@61c; fancy, white clipped, 63@64c. RYE, c i f, export, $1.28½. BARLEY, malting, c i f, dom, $1.05@1.08.

CHICAGO LIVESTOCK MARKET

Hogs—Top, $12.25; bulk, 240@370-lb butchers, $12@12.25; packing sows, mostly $10.75@11; strong weight slaughter pigs, largely $11.25@11.75.

Cattle—Receipts, 500 head; compared week ago fed yearlings and medium weight steers steady to 25c lower; choice yearlings mostly steady; weighty steers 25c off; general steer trade very uneven; lower grade offerings more numerous, sharing decline; extreme top long yearlings, $11.65; baby beef heifers, $11.40; yearling heifers numerous at $10.50@11; general fat she stock trade, 25c lower; vealers, 50@75c up; week's bulk prices follow. Beef steers, $9.25@10.85; stockers and feeders, $6.50@7.75; fat cows, $5.85@8; fat heifers, $7.85@9.75; canners and cutters, $3.25@4.65; vealers, $9@10.50.

Sheep—Bulk prices follow: Clipped lambs, $12.50@13.75; springers, $15.85@16.25; cull clippers, $9.50@10.50; fat ewes, $7.50@8.50; top California springers, $16.35; old crop wooled lambs, $16; clippers, $14.

WOOL MARKET

Boston, May 16, 1925

Domestic—Ohio and Penna fleeces—Delaine unwashed, 48@50c; ½-blood combing, 48@49c; ⅜-blood combing, 46@47c; fine unwashed, 41@43c. Michigan and New York fleeces—Delaine unwashed, 46@47c; ½-blood combing, 47@48c; ⅜-blood combing, 46c; ¼-blood combing, 45c; fine unwashed, 41@42c. Wisconsin, Missouri and average New England—½-blood 46@47c; ⅜-blood, 44@45c; ¼ blood, 43@44.

GRASS SEED—WHOLESALE PRICES

Toledo, Ohio, May [illegible], 1925

Clover, cash, $15.50; October, $12.35; December, $13.25. Alsike, cash, nominal; August, $12.50. Timothy, cash, $3.[illegible]; May, nominal; September, $3.50.

FEED PRICES

The prices below are for prompt shipments based on payment on arrival of cars as quoted by the Philadelphia jobbing trade to retail feed dealers on Monday, May 18. Quotations cover solid carlots for delivery at Philadelphia or Scranton rate points.

Pure spring bran	$[illegible]
Spring bran	[illegible]
Soft winter wheat bran	[illegible]
Hard winter wheat bran	[illegible]@39.00
Standard middlings	[illegible]
Soft winter wheat middlings	42.00@44.00
Flour middlings	42.00@45.00
Red dog flour	[illegible]
White hominy	[illegible]
Yellow hominy	[illegible]
Gluten feed	[illegible]
36 per cent cottonseed meal	[illegible]
41 per cent cottonseed meal	[illegible]
43 per cent cottonseed meal	[illegible]
34 per cent linseed meal	[illegible]

For Baltimore, Cumberland and Williamsport rate points, subtract 50c per ton (for cottonseed meal 40c per ton); for New York, Newark rate points, add 40c per ton (for cottonseed meal 10c per ton); for Woodbury, Bridgeton rate points, add $1.00 per ton; for Freehold, Toms River, Cape May Rate points, add $1.40 per ton.

Feed in small supply. Heavy demand. Nearby shipments at a premium.

COUNTY NEWS AND COMMENT

Armstrong County, Pa.—In the last twenty years we have not had such ideal weather during April as this season. The first week of May has been the reverse with showers, thunderstorms, slush, hail and some snow; temperatures ranged from twenty-six to thirty-seven degrees at 6:00 A. M. All oats were seeded in April and are not showing well. No one has as yet turned stock to grass, in full, altho pasturage is luxuriant. Wheat and rye give promise of about fifty per cent of an average crop. Apples, pears and cherries are fully three weeks ahead of conditions on this date. Much uneasiness is entertained among fruit growers as to the outcome of the crop on account of this unusual weather. Spraying for coddling moth will begin next week if weather conditions permit. Those having a few pigs for sale are asking $14 to $16 per pair at six to eight weeks old, and some say they are getting it. All grain-fed cattle have been sold and many veal calves have gone to the butcher's block. Home gardens will be smaller than ordinarily on account of the dearth of some seeds and bulbs and the general high price. Onion sets were not obtainable at 30c per pound. Sweet corn is selling at $2.50 per peck. Field corn seed with no guarantee as to germination is selling for from $4 to $6 per bushel. Prices obtaining in this locality are as follows: wheat, $1.50; rye, $1.25; corn, $1.25; oats, 60c; potatoes, 50c@$1.75, as to quality; live chickens, 25@30c; butter, 40@45c; eggs, 25@30c. The need of farm help not pressing and idle men plentiful.—W. M. P., May 7.

Camden County, N. J.—Potatoes are making a good growth. The acreage generally has been reduced. The price of old potatoes is now about one-half of that of a year ago. Corn planting is in full swing. Cold nights continue to retard plant growth but frost has done little serious damage to fruit trees. Some early strawberry blossoms were killed. The contract price for tomatoes is $2 per ton more than last year. Wages are about the same as last year, with the supply of labor about equalling demand.

An item of interest to all farmers in the county is the new market which has been opened in Camden. This market is located on the site of the old Reading R. R. terminal at the foot of Kaighn Avenue. It has the advantage of rail and water transportation and there is real need for a market here to serve a rapidly growing city and suburban population. Its success will mean much to the farmers on this side of the river. Aside from the cost of ferrage it eliminates the time wasted waiting for a boat, the longer haul, and the question of a Pennsylvania license for farm trucks need not bother our farmers in the future. The movement is being sponsored by the City Commission of Camden.—S. R. B., May 8.

Centre County, Pa.—Owing to fine weather the spring work is well advanced. Some farmers say oats is not coming up well, a few are resowing. Part of the corn is planted. A lot of farmers had expected to begin planting this week but several wet days have delayed the work. There is a great traffic in day-old chicks. Apple trees are in full bloom. Fruit was considerably injured by the cold snap of April 29-30 when we had both ice and snow. The cool mornings still continue. Even this morning we had a good frost. Early potatoes are planted. Several boys' potato clubs are forming under the direction of the county agent. Michigan Russet potatoes will be used. Veal calves bring [illegible] per lb. and spring lambs 15c per lb.—[illegible], May 12.

Chester County, Pa.—Very little corn planted over the county due to the extremely cold weather. Seed corn is in very bad shape. The potatoes are practically all planted with a larger acreage than usual. The fruit outlook is good. Pears are very well set and some varieties of apples. Where spraying has been done very little aphis is found. There has been more than the usual number of baby chicks sold in the county. Dairy feeds have been very strong, prices ranging from $45 to $51, depending on kind and quality. Wheat and oats are looking good but hay prospects are not as good as a few weeks ago. Pomona No. 3 of this county and Delaware will celebrate their [illegible] anniversary on May 28 in West Chester.—F. H. G., May 12.

Frederick County, Md.—Some frost the first part of the week but fruit doesn't seem to have been hurt much. In some sections fruit was considerably damaged by hail on April nineteenth. Oats were all sowed early this year and are looking fine. Wheat and rye also looking better than average. Grass looking good but needs more hot sun and warmer weather. Corn planting should be practically completed by the middle of May. Prices of farm produce remain good. Eggs are exceptionally high, bringing 28@30c on the local market; wheat practically same tho slightly lower; corn selling around $1.50 bu. Steers gaining slowly; nearly everybody selling early on account of the shortage of feed.—R. J. W., May 9.

Indiana County, Pa.—The glorious spring weather during April took a sudden change for the worse and the past ten days have been exceedingly cold and damp. Some corn had been planted but most farmers are rejoicing that they held off a day or two. Oats seems to be thriving very nicely. Hay and pasture seem to be exceedingly slow in coming and not many people have turned their stock out to pasture yet, but soon the ensilage will be gone. We are expecting a good crop of fruit. Many spraying demonstrations were held this spring and a large number of orchards were sprayed. Eggs, 22@23c; butter, 38@40c; hogs, 10c; hay still difficult to sell at $12@14 ton; milk, in Indiana, $2.50 cwt.—H. A. N., May 8.

Lancaster County, Pa.—We have had a very wet, cold spring and seeding of spring crops has been greatly delayed. Oats is seeded, and a few have planted corn. Potatoes are all planted. The acreage of each crop is about as usual except tobacco, which it is likely will be somewhat reduced as it has been difficult to dispose of the last crop grown and the price has been reduced. Gardens are planted, but the vegetables are growing very slowly. Prices: butter, 45c; eggs, 28c; lard, 17c; seed corn is in demand and is bringing $2@2.50 bu. Seed oats is 78c bu.; bran, $1.85 cwt.; oats feed, $1.45 cwt.—R. C. R., May 14.

Lawrence County Pa.—Vegetation coming on slowly,—too cold. Several light frosts during past two weeks. Thunderstorms with rain and hail have been frequent. Potatoes planted in April are slow to come up. Splendid showing for fruit of all kinds except peaches if late and severe frosts don't catch us. Since tubercular testing started cows are scarce and high priced. Plenty of old hay on hand yet but not much demand. Rye, $1; wheat, $1.62; oats, 58c; ear corn, 50c; country butter, 48c; eggs, 40c.—M. L. V., May 5.

Lehigh County, (Upper), Pa.—The month of May up to the eleventh has been cold and stormy. Ice froze to the thickness of a window pane on Friday morning the ninth. Frost almost every morning. Grass fields have an exceptional stand and with warm and good growing weather a bumper crop of hay may be expected. Rye and wheat fields are heading out fine. Apple and all kinds of fruit trees are flowering profusely. Road masters are busy scraping and repairing the roads. Potatoes are all planted and corn planting is now in order. Good seed corn is scarce. Many poultry raisers report poor luck with their spring hatches. Old potatoes are nearly all on the market, prices low. Wheat has again advanced and dealers are paying $1.75 for Eggs, 28c; butter, 36c; chickens, 28c. Very few beef cattle fed last winter. There is a good demand for same at present at 9c on the hoof.—G. J. B., May 11.

Monroe County, Pa.—April was cool with local rains and frequent thundershowers followed by heavy frosts. Oats nearly all seeded. Corn ground also about finished. A car of disease-free seed potatoes arrived Monday from Michigan. The annual spring district tours by the county Sunday school officers closed with good results. The annual convention was held in Stroudsburg May 7 and 8 with delegates from each school in the county present. The following prices [illegible]: corn, $1.15; oats, 65c; rye, [illegible]; wheat, [illegible]; eggs, 28c; potatoes, [illegible]; pigs, [illegible]; chickens, [illegible] 16c.—G. F. S., May 8.

Passaic County, N. J.—The weather for the last month has been unseasonably cold. Apples were in bloom but did not seem to suffer much in this locality. Pears suffered more. Strawberries were hit the hardest of any of the fruits. The Big Joe was the hardest hit with Premiers the least. After opening the buds in several parts of the field, I would say that there is about fifty per cent loss and it may run to seventy-five per cent. Sour cherries about twenty-five per cent loss. The asparagus that was up was hit from fifteen to sixty per cent, depending upon the locality of fields. Asparagus $3.00@6.50 doz., depending on size; demand good. Green onions, 25c doz.; rhubarb in fair demand at $2 per 100. Pansies going fair at 6 and 7 for $1. Frame lettuce from $1.50 to $4 depending on quality. There is not as large a planting of peas in this locality but other things are about normal.—N. D., May 10.

Potter County, Pa.—May was ushered in by unusually cold weather. It rained every day until the ninth and often the rain storm was followed by snow. Few fields of oats are sown and little garden planting has been done yet. The first strawberry blossoms and asparagus stalks were ruined by frost; fruit buds have not developed enough to be seriously injured. Many veal calves are being shipped. These are sold for 8@9c per lb. A pound of salt pork costs 26c at the grocery. Few young pigs in this locality. Twenty cents per bushel is the price of potatoes. Many farmers will plant a good acreage of them this year. The first sale of cheese from the local factory brought 20c per lb. Eggs, 27c; butter, 50@55c. The sale of our few remaining tracts of timber goes merrily on, but reforesting is also making gains. There is so much land here that is ideal for sheep raising it would seem a profitable change if more sheep were kept.—M. C. S., May 11.

Schuylkill County, Pa.—Too cold for the average crops. However, the hay prospects are very bright. Those who started alfalfa last year have a very good stand. Quite a few orchards were started this spring. More spraying done this spring than ever before. Most oats are sown and practically all potatoes planted. Corn planting season is here but some are holding off on account of the cool weather prevailing. Wheat does not seem to thrive. Farmers are planning a field day to be held June 20 at the Schuylkill County Fair Grounds. A carload of tuberculin tested cows was readily disposed of by a local dealer. Demand for milk is very good. We are considering a cow testing association which is one of the many things needed in this county.—G. S. R., May 12.

Susquehanna County, Pa.—Plenty of rain during the past month all around us, yet an unusually small amount in the south central part of the county which seems to be in the drought belt. In fact, some wells are going dry. Fifty-eight head of purebred cattle were consigned from this county to the Troy-Canton Holstein Breeding and Sales Association, held at Troy, Bradford County, May seventh. The Jersey Breeders of Susquehanna County held an important meeting at Montrose, April twenty-third. Boys' and girls' calf clubs are to be organized in the county in the near future. Good prices are being paid for purebred calves. George and Howard Pickett, of Rush, recently sold several head of Guernseys at $250 each. This county seems to never lack a market for good purebreds. The work of eradicating tuberculosis keeps moving forward. Most of the oats are sowed. Corn ground is plowed and most owners will increase the acreage. Many farmers are using certified seed potatoes. I have found the uncertified not profitable. Fruit was but little damaged by early frosts. Nearly everyone is hatching or raising many chickens this year,—more than usual.—E. M. L. B., May 12.

Tioga County, Pa.—The weather for the past four weeks has been very changeable. There have been only a few really warm days. April 19 and 25 there were bad electric storms with high wind. The last day of April snow fell here during the entire day. The cold, wet weather is holding farming back. Most of the oat seeding is done but little has been done toward other crops. Pastures look good. New seeding looks fine in most places. A few hardy vegetables are being planted. Quite a few farm flocks are dropping off on production, consequently, hens are thrown on the market and the price drops. Veals, 9c; four-week-old pigs $5 each and very scarce; hens, 22c; eggs, 2[illegible].—P. W. L., May 11.

Union County, Pa.—Many acres of corn were planted last week but some farmers are still plowing sod for corn. Planted corn seems to be germinating very well. Oats have made very little growth but this rain will give them a good start. Clover fields are showing up very well but pasture meadows are short. Potatoes have nearly all been planted with a smaller acreage than last year. Wheat fields generally look good. Dry feed is holding out well. Many persons are buying day-old chicks instead of hatching them. [illegible] is building another hen house eighty by twenty feet to increase his flock in the [illegible] of Hartleton. The third spraying of apple trees is in order.—J. N. G., May 11.

Cabbage for Pennsylvania

NEW YORK shipped as much cabbage into fifteen large Pennsylvania markets during 1924 as was raised in the entire Keystone State, according to the Bureau of Markets which has completed a survey of the carlot receipts of fruits and vegetables. Receipts into the surveyed markets from all states totaled 4229 cars last year compared with 4236 cars in 1923. The only important sources of late cabbage in Pennsylvania cities were New York with 1874 cars and Pennsylvania with 132 cars. Receipts of early cabbage in the larger markets of the state were mainly from these states: Texas, 510; Florida, 476; Virginia, 415, and South Carolina, 180. Ohio, whose cabbage is classed between early and late production, supplied 232 cars.

Eighty per cent of the 4229 cars were sold in Philadelphia and Pittsburgh, and eighty per cent of the 1874 cars from New York likewise moved thru these cities. These two markets do not draw on the same states for cabbage supplies with the exception of New York and Texas. Most of the receipts from Florida, South Carolina and Virginia were recorded in Philadelphia while a majority of the cabbage shipped to this state from Ohio and Mississippi were found in Pittsburgh.

Pittsburgh Handles Two-thirds

Two-thirds of the 132 cars from Pennsylvania were handled in Pittsburgh. Other markets which received cabbage from this state in carlots were: Lancaster, 12; Harrisburg, 9; Wilkes-Barre, 8; and Scranton, 7.

Erie County is the commercial cabbage area in this state. The United States Bureau of Agricultural Economics reports that 295 cars of cabbage were loaded at Pennsylvania points for shipment during 1924. Three-fourths of these originated in Erie County, a portion of which moved to Pittsburgh. Tioga County shipped 25 cars during the year, probably to eastern Pennsylvania markets. Sixteen cars were shipped from Lancaster County, practically all of which were consigned to the Lancaster market.

Early Peach Crop

THE early peach crop in 10 southern states this year will be somewhat smaller than the large crop of last year, according to the May 1 condition report of the United States Department of Agriculture which places the condition of the crop at 69.2 per cent of normal as compared with 78.6 per cent last year.

The condition figure for Georgia, which is by far the leading producer in the states covered, is 70 as compared with 80 on May 1 a year ago. Texas shows a condition of 62 this year compared with 67 last year; North Carolina 73 compared with 83; South Carolina 76, against 78; Oklahoma 53, against 84; Arkansas 74, against 85.

Prospects for the early crop in Alabama and Mississippi were more favorable on May 1 this year than last.

Onion Production

CRAWFORD and York Counties represent the Keystone State in the commercial production of onions. Last year the 72 cars shipped as reported by the United States Bureau of Agricultural Economics were about equally divided between the two counties, altho in the several previous years York was the larger shipper. In the latter county the crop is an early one being marketed in July and August, while in Crawford the crop does not mature until late fall and it is stored and sold thru the winter and spring months.

Onion shipments from Pennsylvania have showed a steady decrease of 20 per cent each successive year since 1921. However, there has been no corresponding drop in production. Trucking probably accounts for most of this reduction, as primary highways are thru both producing areas.

SWINE

BERKSHIRES PUREBRED REGISTERED Brood Sows, Boars. Male and female pigs. **WOLF CREEK FARM, R. D. 2, Slippery Rock, Pa.**

POLAND CHINAS of approved breeding, spring gilts bred to new Boar sired by the Grand Champion Armistice. Service Boars, one two-year-old herd boar. For prices address **S. Eagley, Zanesville, Ohio.**

PIGS! Chester Whites and Berkshires six weeks old, $6.50 each. Ready to ship. Include $1.00 extra if you will not return our crate. **Indian Corn Hog Farm, Dushore, Pa.**

Yorkshire bacon hogs. Registered stock. Boars ready for service, bred and open gilts, pigs. **Holliday Farms, North Springfield, Pa.**

Food Chopper

The Keystone Food Chopper is constructed on positively correct principles. Will cut any kind of meat, raw or cooked; all kinds of vegetables, coarse or fine. Leaves no uncut food in the machine and no drip on the floor.

Four cutting plates with each Chopper, also Recipe Book and instruction tag. We positively guarantee this Food Chopper to give entire satisfaction.

How to Secure It.

Send us three yearly subscriptions to Pennsylvania Farmer at $1.00 each and we will forward you the complete outfit by prepaid parcel post. Given with a single subscription and $1.00 additional.

Pennsylvania Farmer
261 South Third Street
Philadelphia, Penna.

Ice Cream Freezer

Two Quart Size

Freeze your own ice cream, fruits and water ices with a Jeannette High Speed Freezer. Ten to fifteen minutes does the trick.

Full directions and many recipes for making ice cream, fruits and water ices accompany each freezer. We will send you one of these wonder freezers parcel post prepaid for 2 yearly subscriptions to Pennsylvania Farmer at $1.00 each or with your own renewal and $1.00 additional.

Pennsylvania Farmer, 261 So. 3rd St. Phila. Pa.

PLEASE say: "I saw your adv. in Pennsylvania Farmer."

Where the Difference Lies

Why Some Farmers Succeed and Others Fail

WE OFTEN see two men starting out to be farmers and tho they seem to have equal chances, one succeeds while the other fails. This is not always due to lack of industry or business acumen, on the part of the failure, but may be because of his lack of versatility. Especially is this true of the man on a small farm.

A well-to-do farmer I have in mind contemplates making extensive improvements in his farm property but hesitates to begin because of the cost of skilled labor. Because he is versatile his less well-to-do neighbor goes on making improvements year after year with little cost except for materials. He can do mason work, understands the mixing and using of concrete, does acceptable carpenter work, sets shoes on the work horses, repairs farm machinery and coaxes his flivver into good humor when his neighbor would call up a garage.

Be a Jack-at-all-trades

Perhaps on a farm more than anywhere else it pays to be a Jack-at-all trades. If one is not he must see the profits of his business go to pay the enormous by-the-hour wages of skilled workmen. This suggests another reason why young men should serve an apprenticeship working on a farm before purchasing one. Many farmers can do almost all of the repair work and the like on their farms and from these farmers the hired man soon acquires much wisdom about many things which will be required of him on his own farm later. Aside from the knowledge there is gained a confidence in one's ability which is a real asset in the business.

With the handy man a breakdown is not a disaster, but, a challenge, and there is real pleasure, besides profit, in being able to plan and work out your plans without calling in specialists.—M. C. S.

Book for Farm Lovers

ONE of the most readable books that has come to our table in recent months is Kelsey's Rural Guide. It is full of the spirit which the successful farmer, gardener and fruit grower must have. Up to date without being forbiddingly scientific in style it imparts knowledge as well as inspiration. David Stone Kelsey was a member of the Roosevelt Country Life Commission and has long been an active member and leader in the Grange, has been a lecturer for many years. Mr. Kelsey knows country life and the problems of the farm having spent most of his life in the country. The book contains 300 pages and is divided into sixty short chapters. The few chapter titles given will indicate the range of subjects: Life More Abundant, Liberty and Living, Foundations of Success, The Blessed Small Fruits, Rural Life for Women, Wonders of the Soil, The Secret of Fertility, Farm Buildings, The Farm Dairy, Crop Rotations, Water Supply, Stumbling Blocks, Orchard Fruits, Market Gardening, Specialty Farming, The Rural Community, The Rural Grange, Country Schools and Churches.

The book is published by the Atlantic Monthly Press, Boston, Massachusetts.—R. P. K.

Young Farmers' Week

THE 1925 Young Farmer's Week will be held at State College, following the commencement activities in June. The young farmers will arrive at the College on Tuesday, June 16 and leave for home Friday, June 19, which makes the program one day shorter than usual.

The program for Tuesday evening will consist of addresses of welcome and entertainment. On Wednesday morning, the various departments of the College will be inspected. For this purpose the visitors will be divided into small groups. In the afternoon of both Wednesday and Thursday most of the time will be devoted to games or some other form of recreation.

Wednesday evening the young farmers will participate in a meeting with the grown-ups who have come for the annual Farmer's Field Day exercises which follow on Thursday. The state-wide judging contests will be staged Thursday morning and the announcement of the winners and the awarding of the prizes will take place at a final meeting on Thursday evening.

The increasing popularity of the annual gathering of young farmers is indicated by the following figures. In 1920, the attendance was 100; in 1921, 222; 1922, 275; in 1923, 321, and in 1924 the attendance totaled 421.—A. L. B.

The Light in the Clearing

(Continued from page 23)

I remember how they felt the cloth on my back and how proudly they surveyed it.

"Couldn't buy them goods 'round these parts," said Uncle Peabody. "Nor nothin' like 'em—no, sir."

"Feels a leetle bit like the butternut trousers," said Aunt Deel as she felt my coat.

"Ayes, but them butternut trousers ain't what they used to be when they was young an' limber," Uncle Peabody remarked. "Seems so they was gettin kind o' wrinkled an' bald-headed-like, 'specially where I set down."

"Ayes! Wal I guess a man can't grow old without his pants growin' old, too—ayes!" said Aunt Deel.

"If yer legs are in 'em ev'ry Sunday they ketch it of ye," my uncle answered. "Long sermons are hard on pants, seems to me."

"An' the longer the legs the harder the sermons—in them little seats over 't the schoolhouse—ayes!" Aunt Deel added by way of justifying his complaint. "There wouldn't be so much wear in a ten-mile walk—no!"

The chicken pie was baking and the strawberries were ready for the shortcake.

"I've been walkerin' since the dew was off gittin' them berries an' vi-lets—ayes!" said Aunt Deel, now busy with her work at the stove.

"Aunt, you look as young as ever," I remarked.

She slapped my arm and said with mock severity:

"Stop that! W'y! You know better—ayes!"

How vigorously she stirred the fire then.

"I can't return the compliment—my soul! how you've changed!—ayes!" she remarked. "I hope you ain't fit no more, Bart. I can't bear to think o' you flyin' at folks an' poundin' of 'em. Don't seem right—no, it don't!"

"Why, Aunt Deel, what in the world do you mean?" I asked.

"It's Purvis's brain that does the poundin', I guess," said my uncle. "It's kind o' got the habit. It's a reg'lar beetle brain. To hear him talk, ye'd think he an' you could clean out the hull Mexican nation—barrin' accidents. Why, anybody would suppose that yer enemies go to climbin' trees as soon as they see ye comin' an' that you pull the trees up by the roots to git at 'em."

"A certain amount of such deviltry is necessary to the comfort of Mr. Purvis," I remarked. "If there is nobody else to take the responsibility for it he assumes it himself. His imagination has an intense craving for blood and violence. It's that type of American who, egged on by the slave power, is hurrying us into trouble with Mexico."

Purvis came in presently with a look in his face which betrayed his knowledge of the fact that all the cobwebs spun by his fancy were now to be brushed away. Still he enjoyed them while they lasted and there was a kind of tacit claim in his manner that there were subjects regarding which no honest man could be expected to tell the truth.

(To be continued next week)

At night when sudden tremors shake
And agitate the casement,
The cause may be a distant quake
Or raisins in the basement.

TO FIGHT THE CORN BORER ALL CORN STALKS MUST BE BURNT BY JUNE FIRST
BY ORDER OF DIRECTOR OF AGRICULTURE

Veterinary

Conducted by W. C. Fair, V. S.

Advice thru this department is free to our subscribers. Each communication should state history and symptoms of the case in full; also the name and address of writer. Initials only will be published. We cannot make reply by mail. This is one of the most valuable columns of the paper and we invite readers to make use of it. Clippings from this column, when properly preserved and classified, make one of the most valuable medical symposiums a farmer-stockman can obtain.

WARTS ON COWS' TEATS.—I would like to have you prescribe a remedy for removing warts from the teats of my cows. These warts are large and numerous; it is hard to milk her.—B. S., Cambridge Springs, Pa. The long warts should be cut off with sharp scissors and the sore touched with a stick of lunar caustic. Very often warts can be entirely removed by smearing them over, after each milking, with pure olive oil. Scabby teats may be smeared with vaseline containing enough carbolic acid to give it an odor. Give each cow a dessertspoonful of Fowler's solution at dose in either feed or in drinking water two or three times a day.

NASAL CATARRH.—We have a cat, three years old. He is a Maltese and has been altered. Up to a month ago he was always well, then I noticed the inner lid of the eyes seemed inflamed and he kept the eyes partially closed. He also has considerable nasal trouble and he frequently sneezes, his bowels act too free. I gave him two teaspoonfuls of castor oil, also attempted to wash out nostrils with syringe but failed. He eats pretty well, his usual diet is milk, fresh meat and fish, either raw or cooked. I mostly keep him in the house as he is fond of killing birds. His nostrils seemed to be blocked up with mucus.—Mrs. W. S. H., Cape May, N. J. Dissolve a dessertspoonful of bicarbonate of soda in a pint of tepid water; dip nose and lower portion of face in this solution three or four times a day. He should be allowed to run out, and remain there, every pleasant fair day. It is a mistake to keep him continually in a shaded place as he requires more sunshine and exercise.

GRUB-IN-THE-HEAD.—I have a sheep that has been sick for some time. Our veterinary tells me that she has grub in the head.H. J., Butler County, Pa. You might try pouring a mixture of snuff and olive oil into nose, but place the sheep on its back when you do it. In some cases wire snares formed of small loops can be used to advantage in removing the grubs.

BURSAL BUNCH ON KNEE.—I have a four-year-old cow that has had soft bunch on knee for the past twelve months. Our veterinary claims it was caused by lying down.—R. P., Carroll County, Md. Apply equal parts of tincture of iodine and spirits of camphor to bunch daily. Keep her in well bedded box stall.

BLOTCHES.—Have a young cow that has large blotches on her back and near root of tail which ooze a watery fluid.—A. B., Armstrong County, Pa. Dissolve one ounce of acetate of lead, one dram of tannic acid in one quart of water and wet sore parts three times a day. Equal parts of boric acid and oxide of zinc is another good remedy and it should be applied twice daily.

CHRONIC SCOURS.—Have a yearling heifer that has been troubled for a long time with scours and nothing I have done for her seems to make her any better.—A. L. P., Fayette County, Pa. Give her a teaspoonful of powdered dried sulphate of iron at a dose in feed three times a day.

SORE EYES.—Our very young lambs are troubled with sore eyes, but do not seem to be sick.—H. N., Chemung County, N. Y. Dissolve a teaspoonful of boric acid in a half pint of water and apply a few drops to eyes twice a day. A bright light will make them worse.

Our Readers' Classified Advertising Department

A market place to buy or sell at little expense. Over 90,000 farm families read Pennsylvania Farmer every week. Rate 8 cents a word each for one, two or three consecutive weekly insertions; 3 cents a word each for four or more insertions. Count each number and initial and send cash with order. Orders, discontinuances or changes of copy must reach us by Wednesday of week preceding date of issue. All advertisements set in uniform style, no display type or illustrations. Poultry advertising may run here, but if displayed or illustrations used must run in display advertising columns at commercial advertising rate (55 cents per agate line). Livestock advertising not accepted in this department. Minimum, ten words.

ENGLISH SHEPHERD PUPS. Several ready to begin work. W. W. Norton, Ogdensburg, N. Y.

One look picks the *profit-maker*

But appearance is a dangerous guide in choosing oil

ONE look may be enough to tell a skillful farmer the hogs that are easiest to fatten, or the poultry that brings the greatest profits.

But there is one place on the farm where the eye fails, where looks mean nothing. Two *oils*, may look as much alike as two prize Durocs, but differ as widely as a pure-bred and a runt.

Appearance won't tell you that one oil will distribute perfectly in your motor and that another may not.

From appearance, there isn't any way of judging that one oil will break down and another stand up under the heat of your motor, that one will burn clean and another produce soot and carbon, and that one will seal pistons and give power and smooth running, while another will let power "blow by" the piston rings.

For operating economy, follow this guide

When the eye fails as a guide, isn't it reasonable to get the most expert advice you can find?

Near your farm is a Mobiloil dealer who gives advisory service in lubrication. He runs an established business year after year and is more interested in keeping you for a steady customer than in making an occasional sale at fancy profits. On his wall, he has the Gargoyle Mobiloil Chart of Recommendations because he knows it puts oil-selling on the only sound basis—the use of this Chart means that every purchaser gets oil which engineers agree is perfectly suited to the requirements of his motor.

The dealer's judgment is backed by the combined judgment of motorists who call for Mobiloil more than for any five other brands combined, and by practically all manufacturers of automobiles, trucks, tractors and motors who have placed their okays on the recommendations listed in the Mobiloil Chart.

Where you can secure advisory lubrication service

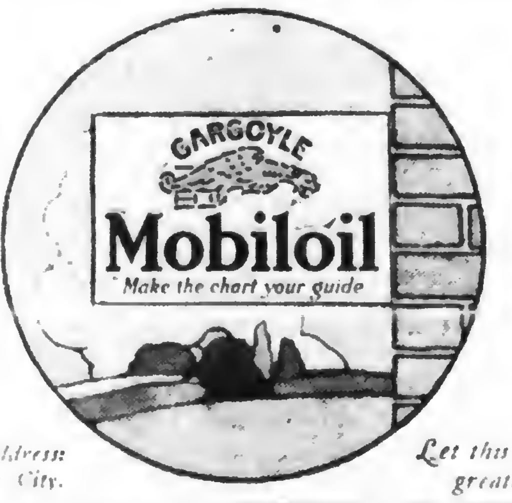
It is easy to find the dealer who gives this advisory service. On the outside of his building, he prominently displays a metal Mobiloil sign with the red Gargoyle. Inside, you will find the complete Chart. Make it your guide and you will always be certain of getting oil designed for duty in your motor.

Mobiloil is made from crude stocks chosen only for their lubricating qualities and not for high gasoline yield. Every batch, every can, every quart of Mobiloil is "true to type."

It is made by the Vacuum Oil Company which has specialized solely in lubrication for 59 years.

Tractor Lubrication

The correct engine lubrication for the Fordson Tractor is Gargoyle Mobiloil "BB" in summer and Gargoyle Mobiloil "A" in winter. The correct oil for all other tractors is specified in our Chart. Ask for it at your dealer's.



GARGOYLE
Mobiloil
Make the chart your guide

Let this sign guide you to greater farm profits

Branches in principal cities. Address: New York, Chicago, or Kansas City.

VACUUM OIL COMPANY

MAKE THIS CHART YOUR GUIDE

THE correct grades of Gargoyle Mobiloil for engine lubrication of prominent passenger cars and motor trucks are specified below. If your car is not listed here, see the complete Chart at your dealer's.

The grades of Gargoyle Mobiloil are indicated by the letters shown below. "Arc" means Gargoyle Mobiloil Arctic.

Follow winter recommendations when temperatures from 32° F. (freezing) to 0° F. (zero) prevail. Below zero use Gargoyle Mobiloil Arctic (except Ford cars, use Gargoyle Mobiloil "E").

Safety First in Peach Spraying

Care in Use of Arsenate Will Prevent Tree Injury

By ARTHUR J. FARLEY

New Jersey Agricultural Experiment Station

THE susceptibility of peach trees to spray injury during the growing season is well known to the experienced and observing fruit grower. Concentrated lime-sulphur and Bordeaux mixture have been almost entirely discarded in the East in connection with the summer spraying of peaches, while lead arsenate must be used with care because of the danger of injury to fruit, foliage or twigs.

Arsenical injury, or injury produced by water soluble arsenic liberated on the tree by the decomposition of lead arsenate applied to control curculio, has been quite serious in several peach growing sections during the last few seasons. The injury may appear in several different forms; namely, leaf injury generally followed by defoliation; cankering of the one-year wood and cankering of the new growth.

The leaf injury appears in the form of irregular spots, brown in color. The edges of the leaves also show the same kind of injury. Leaves that are severely affected usually fall a few days after the injury makes its appearance. However, the leaf injury may not appear for a month or six weeks after the trees have been sprayed with a mixture containing lead arsenate.

Indications of Twig Injury

Injury to one-year twigs first appears in the form of slightly darkened blotches usually along the upper or more exposed side. If the injury affects only the outer tissues the twig continues to enlarge, but the bark cracks and presents a rough, shaggy appearance. If the injury goes deeper than the outer bark, the affected areas become sunken, finally crack and in wet weather exude gum. Occassionally such a canker completely girdles a twig, but in most cases one side of the branch is not injured thus allowing the normal growth to bring it back to normal within one or two years. The bark on such branches, however, remains rough and shaggy for two or three years.

The injury on the new growth usually occurs where it joins the one-year wood and around the older or lower buds in the form of small brown cankers, similar to brown rot cankers. Cankers formed at the base of either the new growth, or the one-year wood weaken the branch sometimes to the extent that it splits or breaks during a high wind or under a heavy load of fruit.

Recommendations of Jersey Station

Experiments and observations conducted by the departments of pomology, plant pathology and entomology of the New Jersey Agricultural Experiment Station have led to the following conclusions and recommendations:

1.—Lead arsenate alone or in combination with lime should never be applied to peach trees during the growing season.

2.—Powdered lead arsenate at the rate of 1 pound to 50 gallons of New Jersey Dry Mix Sulphur Lime is the maximum amount that is safe to use on peaches.

3.—Fresh hydrated lime containing not less than 90 per cent calcium oxide should be used in preparing Dry Mix. Hydrated lime that has been exposed to the air for several weeks, thus being changed to calcium carbonate should not be used in preparing Dry Mix or with other summer fungicides used in combination with lead arsenate.

4.—Great care should be exercised in weighing or measuring all ingredients before they are put into the spray tank. This applies particularly to lead arsenate and lime.

5.—Dry Mix Sulphur Lime itself is not injurious to peach twigs or foliage, the lead arsenate generally used with it being the cause of the trouble.

Tioga the Celery County

THE commercial celery and lettuce business in Pennsylvania is almost entirely confined to Tioga County. Celery shipments last year amounted to 225 cars, 206 of which were Tioga grown, according to figures from the United States Bureau of Agricultural Economics. Of the remainder, Bucks County shipped 1[illegible] cars and Wayne one. The total of 225 cars represents average shipments for the past four years. Lettuce shipments decreased from 2[illegible] cars in 1923 to 17 cars last year, 1[illegible] of which originated in Tioga County.

What Fertilizer Will Do for the Tobacco Crop

TOBACCO responds to fertilizing as perhaps no other crop. Just let the soil or the fertilizer be out of balance—a little too much ammonia or not quite enough potash—and the symptoms of poor nourishment will soon show up in the color of leaf or the character of the plant. The photograph reproduced here shows the effect of leaving ammonia out of the tobacco fertilizer. The plot on the left received 1000 pounds of 5-[illegible] fertilizer per acre, while on the right the same quantities of phosphoric acid and potash were applied but [illegible] ammonia. The photograph was taken in Prince Georges County, Maryland.

The Fine Art of Winning Blue Ribbons

Student Farmers Make the Penn State Dairy Exposition a Notable Event

By A. A. BORLAND

Staff Contributor and Adviser

SATURDAY, May 9, was a big day among the dairy students at Penn State. The occasion was the annual Penn State Dairy Exposition. A contest in the production of clean milk, a dairy cattle judging contest, a dairy cattle fitting and showing contest, a mock sale, and a big dairy banquet were some of the outstanding features of the occasion, all the events being staged by the dairy students.

Clean milk is a sort of hobby at the Penn State dairy barn, where certified milk has been produced regularly for the past four years. The herd of sixty milking cows is housed in one of the most modern college dairy barns in the country and everything is kept as clean as a new pin.

Nineteen students enrolled in this contest. Each one did all the work of preparing his own samples for the contest. This included the sterilization of the milk utensils, milking the cows, aerating, cooling, and bottling the milk. Two classes were provided—one for Holstein and Ayrshire milk, the other for Guernsey and Jersey milk. The judging was done by Professor W. H. Martin of the Dairy Department, and L. W. Morley.

First place in Class One was won by R. B. Dickerson, Andover, N. J., with a score of 98.75 points. First place in Class Two was awarded F. [illegible] Sheehan, of Kennett Square, whose exhibit scored 98.9. Mr. Sheehan also received the sweepstake prize of $5.00 presented by the Dairy Husbandry Club for highest score in the contest.

Low Bacterial Counts

Some remarkably low bacterial counts were in evidence in the contest, a number of samples running below 1[illegible] per cubic centimeter; two samples contained only twenty bacteria each per cubic centimeter. If these students maintain a similar record for clean milk production after the graduation, their services will be in real demand in Pennsylvania which is the second largest market milk state in the nation.

The dairy cattle judging contest was one of the most popular features of the day, fifty-one students being entered in the contest. Four rings of four cows in the Ayrshire, Guernsey, Holstein and Jersey breeds were judged. The official judges were Mr. Clark F. Berry, Sinking Springs, for Holsteins; George Schuckman, Elizabethtown, for Ayrshires; M. T. Phillips, Pomeroy, for Guernseys, and J. S. Campbell, Butler, for Jerseys.

J. V. McCahon, of Bryn Mawr, carried off first honors in the contest, thereby winning the prize of $5.00 presented by Prof. W. D. Swope, of State College.

The beautiful appearance of the animals fitted up for the showing contest would have done credit to professional showmen. The coats of the animals glistened like satin; their horns and hoofs were polished like ivory, and each one seemed to realize that it was on dress parade.

Funds for Tuberculosis Eradication

APPROXIMATELY $2,349,000 was authorized by the 1925 Legislature and approved by Governor Pinchot for paying indemnities resulting from losses suffered by farmers who own cattle infected with serious contagious disease, especially tuberculosis. The amount provided by the 1923 Legislature was $535,000 making a total for the past two sessions of $2,884,000. In 1921, $192,965 was provided; in 1919, $184,731, and in 1917, $120,000 or a total for these three sessions of $497,696.

The great increase in appropriations for indemnities makes possible the continuation of tuberculosis eradication on a large scale. During the past two years the area plan of testing has been generally adopted which means that all the herds in a township are tested at one time.

On May 1[illegible], 56 per cent or more of the herd owners in 245 townships in 35 Pennsylvania counties had signed agreements and were waiting for a tuberculin test under the modified area plan. In addition to the 245 townships the owners of 33,579 cattle have filed application for a test under the individual accredited herd plan. This plan is available for those who are not located in townships where the herd owners in the whole area desire the test.

Pennsylvania ranks third among all the states in the value of her dairy products, sixth in total number of dairy cows, but only fourteenth in the number of cattle under supervision for the prevention and eradication of tuberculosis. The funds which have just been made available will permit the bovine tuberculosis eradication work to progress as it has in other leading dairy states. This will mean more efficient production of milk, a more healthful product for the public, and a better market outlet for breeding stock and dairy products.

The first awards in the dairy cattle fitting and showing contest were: three-year-old Ayrshire cows H. V. Green, Butler; yearling Ayrshire heifers, J. V. McCahon, Bryn Mawr.

Prizes for Fitting and Showing

Mr. McCahon also won the breed championship prize of $5.00 presented by the Pennsylvania Ayrshire Breeders' Association for the best fitted and shown Ayrshire in the contest. Mr. George Schuckman, Masonic Homes, Elizabethtown, acted as official judge of the fitting and showing of the Ayrshires.

The first award for fitting and showing Guernseys was won by J. S. Bryan, of P[illegible]. M. T. Phillips, P[illegible] [illegible] the Guernsey entries in the fitting and showing contest.

The Holsteins were unusually well represented in the fitting and showing contest. The first awards were as follows: aged cows, R. G. Connelly, Sunbury; two-year-old heifers, D. S. Keller, Dawson; yearling bulls, M. A. Farrel, Waverly. Mr. Farrel won the breed championship for the best fitted and shown Holstein and received a medal presented by the Holstein Breeder and Dairyman and $5.00 presented by the Pennsylvania Federation of Holstein Friesian Clubs. Mr. G. H. Truckell, secretary of the Pennsylvania Breeders' and Dairymen's Association, acted as official judge.

Mr. G. W. Huggler, of Bryn Mawr, carried off first honors in the Jersey fitting contest. Mr. J. S. Campbell, Jr., of Clearview Farm, Butler, was official judge of Jersey fitting and showing.

Four Breed Championships

The four breed champions, including the entries of J. V. McCahon, Ayrshire; J. S. Bryan, Guernsey; M. A. Farrell, Holstein; and G. W. Huggler, Jersey, came up for competition for grand championship for the best fitted and shown animal in the whole contest. The Jersey entry by G. W. Huggler, of Bryn Mawr, carried off the purple ribbon and with it the silver loving cup presented by the Dairy Husbandry Club of the Pennsylvania State College.

The mock sale was an interesting feature. A committee had in advance appraised the animals at their market value. Each animal was put up at auction and sold to the highest bidder by E. M. Smith, Center Hall, the official auctioneer. Each student turned in his official bid on the animals and the student whose bids came the closest to the appraised value of the ten animals auctioned off won the contest. Mr. G. M. V[illegible]ng, of Bradford, was the successful contestant; his bids totaling $3075 for the ten animals which came within an even $100 of the appraised value put on the animals by the committee.

The banquet was a most successful event. A college quartette furnished the vocal music that was greatly appreciated. The speakers included President J. M. Thomas, of the Pennsylvania State College; R. G. Bressler, Vice Dean of the School of Agriculture; J. M. McKee, Deputy Secretary of Agriculture, Harrisburg; E. R. Quackenbush, Secretary of the Pittsburgh District Dairy Council; J. L. Wyle, Jeannette; H. D. Allebach, President [illegible] Milk

OUR JOB is to serve our readers. Whenever you are puzzled write to us and we will help you if we can.

Lost time is never found again.

The Wheat Crop Prospects

THE May indications are that the 1925 wheat crop will be decidedly below the average for the past few years. Of course, the present estimate may be increased or decreased, according to favorable or unfavorable weather between now and harvest, but the acreage cannot be changed. Winter killing losses have been extremely heavy in five winter wheat sections, including parts of Ohio, Indiana, Texas, Oklahoma, Kansas, Nebraska, Montana, Washington and Oregon. The May estimate is for a crop of 445 million bushels as against 590 million bushels last year, and 626 million bushels the average of the preceding five years. Over nine and one-half million acres were abandoned this spring. Only three states—Pennsylvania, Illinois and Missouri—show prospects better than last year.

The Oldest Farms

ACCORDING to the Garden Spot News, the live agricultural journal of Lancaster County, the Historical Society is asking for proof of the oldest farm in the county. They want to know which farm has been continually in one family the greatest number of years. We believe this would be a subject of interest in every county. It is said that in some European countries there are farms which have been owned and farmed by members of the same family for more than a thousand years. Of course, we cannot approach that in this country, but in spite of the fact that American farm families have been steadily leaving the farms for the city, there are some places where successive generations have been loyal to the old farmstead and held on to and worked it. We should like to have information of this kind and will pay five dollars for a short history of any farm in any county in our territory which has been continually in one family for one hundred years, providing it is accompanied by a photograph of buildings, owner or owner's family, or some other important feature connected with the farm. After the returns are all in we shall pay an additional five dollars for the one which proves to be the very oldest. The stories and photographs should be in this office by July first. We ask all who will send us such an account to mail us a card stating their intentions at once.

Prune the Government

EVERY demand for economy in government, and every appeal for lower taxes is met by the opposition of those who get their living from the public purse. The army of publicly paid people has been recruited rapidly and regularly for the last one hundred years, and the number increases by the rules of geometrical progression as the years pass. The increasing tendency to centralize the federal government has been the most noticeable feature in our system during the last quarter of a century. Fortunately, the public is becoming aroused and there is a growing opposition towards increasing government bureaus. We are beginning to see that with all the increase in government employes and the consequent expense we are not better governed than in the old days.

There is a very evident back-fire being started by those who feel that their jobs are jeopardized by the demand for economy. They tell us that any lessening of expense, or discharging of employes, or lopping off of bureaus will seriously weaken our government and we shall start at once on the highway to destruction of government. Well, if that must be the result, let it come. If the people of this country after a century and a half of experience are not able to govern themselves in a local way they are not worth the self-sacrifice required of a benovelent bureaucracy!

Standardizing Roadside Markets

MOTORISTS near the large cities are familiar with the "gyp" dealers who, representing themselves to be farmers, sell along country roadsides the second class produce which they buy on the city wholesale markets. New Jersey farmers who operate roadside markets have suffered heavy losses as a result of this sort of dishonest competition. Last year conditions became so bad that plans were made to establish a system of market inspection to protect the state's legitimate roadside markets. Now any farmer may apply for recognition as a standard market. If he complies with the rules agreed upon by the farmers in conference with state market, agricultural, health and highway officials, he can use the term, "New Jersey Standard Farmer's Roadside Market."

Just what this new system will mean to fruit and vegetable growers, as well as to the buying public, is well set forth by the New Jersey Department of Agriculture, which says.

"'Fresh Jersey Strawberries,' sold in standard markets, will be fresh Jersey strawberries. Nor will southern peaches masquerade in the standard markets as early homegrown fruits at fancy prices. The top of the basket of apples or potatoes will be a fair sample of the entire contents. The owner of a standard market will grow on his own farm at least seventy-five per cent of all the produce he sells. He may buy the balance from neighbors, but not more than ten per cent can be imported from other than local sources, and when so imported, will be labeled as such.

"Owners of standard markets also will aid the highway authorities by erecting their stands at least ten feet distant from the highways and with safe approaches and parking space for customers. Grounds and stands will be kept in the best sanitary condition. Produce will be neatly displayed. And when the state market bureau is satisfied that the owner is meeting the rules, he will be loaned th officials signs, designating his market as unde state inspection—an insignia that promises t prove a real attraction to the motoring publi this summer."

Prepare for Wheat Harvest

THE indications are that the Angoumoi grain moth will be bad this year in spit of the comparative inactivity last year. Th present season has opened early and this ha favored a full development of the brood, say H. E. Hodgkiss, extension entomologist o State College. In view of the fact that th wheat crop in Pennsylvania promises to b exceptionally good, and because the price likely to be higher than it has for some tim it will pay Pennsylvania wheat growers t make a special effort to prevent their cro from being ruined by the moth. In two year 1922 and 1923, it is estimated that the mot destroyed a total of nearly ten millio bushels.

The first work is to thoroly clean the bar and bins, using a strong insecticide. If th work is well done it is possible to keep th moths out of the wheat after it is thresh The next point to keep in mind is that thres ing should be done immediately after harves We know of some farmers who in 1923 stac ed their wheat in the field, thinking in th way to avoid its being infested in the bar But the moths did their work in the sta and when it was threshed in the fall the grai was almost ruined in many cases. Wheat is t important a crop in this state to allow th pesky moths to cause the loss of millions dollars' worth when it can be prevented.

Referred Without Comment

UNDER this heading we publish an e torial on some current topic taken fro the columns of a contemporary farm pap Its publication does not necessarily mean th the sentiments expressed are the sentiments Pennsylvania Farmer.—Editors.

THE TARIFF AND THE McNARY-HAUGEN PRINCIPLE

Representative Dickinson, of Iowa, w introduce his new bill, embodying the M Nary-Haugen principle, in December, as so as Congress opens. Probably it will be Fe ruary before the bill will reach the discussi stage on the floor of the House. Then w come the real fight. Efforts will be made cut the Dickinson bill into two parts, so as divide the support. The agricultural for will endeavor to rally the cotton South, t eastern milk producers, and the surplus h and wheat folks together. It is probable t the fight will be the most memorable in t history of American agricultural legislati It possibly will be the last determined eff to put across the principle of the McNa Haugen bill.

If we fail, the next thing to do is to reo the tariff issue at once, making a defi drive for the admission free of duty of products produced by western Europe. Su action will doubtless lower the standard living of wage-earners on the Atlantic s board and decrease the profits of our ma facturers. We trust that our eastern Rep lican friends will remember the glass ho in which they live when they come to deci which way they are going to vote on the Di inson bill next winter.—Wallaces' Farm May 15.

Washington Letter

BUSINESS MEN STUDY FARM PRO LEMS.—The United States Chamber of Co merce is devoting more attention each ye to the problems of agriculture. At the rece annual meetings in Washington, eight leadi address were on agricultural topics.

In the field of agriculture the in- ividual has held his own against he corporation as an economic unit, aid Professor W. I. Myers, of the New York State Agricultural College. "Most business men who are unfamiliar with modern agriculture are very often optimistic as to the opportunities in corporate farming. This enthusiastic optimsm is based n two erroneous assumptions: First, hat the average American farmer is n inefficient producer and is a slip- hod business man and second that he corporate type of organization is est for all types of business."

The American farmer is the most ficient food producer that the world s ever known, according to Pro- essor Myers, who ,emphasizes his atement by pointing out that in ite of the decrease in the propor- on of workers engaged in agricul- e from eighty-seven per cent in 120 to twenty-six per cent in 1920, erican farmers produce enough d and clothing for the nation and large surplus for export.

OLEO MANUFACTURERS AC- IVE.—While much attention was ing given to agriculture at this eeting, the manufacturers of food bstitutes were not idle. The oleo- rgarine interests got the follow- g resolution introduced:

"Whereas, beef fat, pork fat, cot- onseed oil, peanut oil, cocoanut oil, ilk, salt and butter are wholesome d nutritious foodstuffs which are ten in one form or another every y; and

"Whereas, the combination of one more of these fats or oils with lk in imitation or semblance of tter is known as oleomargarine; d

"Whereas, there are many poor ople who are not able to buy a re expensive palatable spread for eir bread than oleomargarine; and

"Whereas, there are about $50,- 0,000 invested in this industry hich produces 250,000,000 pounds oleomargarine per annum;

"Resolved that the Chamber of ommerce of the United States de- ecates the passage of laws and the forts to pass laws prohibiting the nufacture and sale of oleomargar- e, prohibiting the use of either one more of the wholesome foodstuffs ed in the manufacture of it, tax- it, and taxing merchants who y and sell it."

URTH OF JULY PICNICS AP- ROVED. — The farmers' 4th of ly picnic movement being promot- by the American Farm Bureau ederation is meeting with a favor- le response, according to President adfute. Farmers in several hun- ed counties in twenty-five or more ates have announced their inten- on to hold a picnic on July fourth. sident Coolidge has written a let- to President Bradfute highly mending the proposition. All al organizations, including farm d village people will be invited.

"t will mean," says President adfute, "that farmers will again me leadership in this country as y did back in 1776."

FOOT AND MOUTH DISEASE AMPED OUT.—The United States now entirely free from the foot mouth disease. Nevertheless, the ernment is continuing its search the germ which carries this high- contagious disease. As a result of $75,000 appropriated by Congress investigating the foot and mouth ease, three American scientists now in France in an attempt to late the germ so that a preventive cine can be perfected.

In reply to the question, why go France to hunt the germ, Dr. John Mohler, chief of the Bureau of imal Industry, says he would not to take the risk of having the escape from the laboratory and se great losses to the American estock industry. In European ntries the disease is now preval- t—E E. Reynolds.

Harrisburg Letter

FINANCING RURAL SCHOOLS.— e country schools, especially the ancing of the courses, the expan- n of lines of vocational instruc- n and the improvement of build- s, are to be given further study during the summer period by Dr. Francis B. Haas, the new superintendent of public instruction, and his staff. Dr. Haas' first announcement on assuming his new office was that he would endeavor to get the amendments to the school code applying to rural education into operation and continue the consideration of recommendations on rural schools made by the committee studying that phase of education in Pennsylvania. However, Dr. Haas has announced he does not intend to upset things or to work wonders, but just apply existing laws and common sense. The foremost step will be to work out with State Treasurer Samuel B. Lewis the plan of the new treasurer to pay all school districts their money as soon as due instead of extending the period of payment over a month. It is believed prompt payment will go a long ways toward bettering conditions. The next payment will be due in August.

TO DISCUSS RURAL POWER.—Governor Pinchot plans to make some more speeches on the subject of rural power development in the course of the summer, carrying out the line of procedure mentioned in his recent veto of the resolution to set up a joint legislative commission on power. The Governor will go to some country gatherings during the summer and discuss how the proposed rural power bills, including power districts and mutual power companies would have operated.

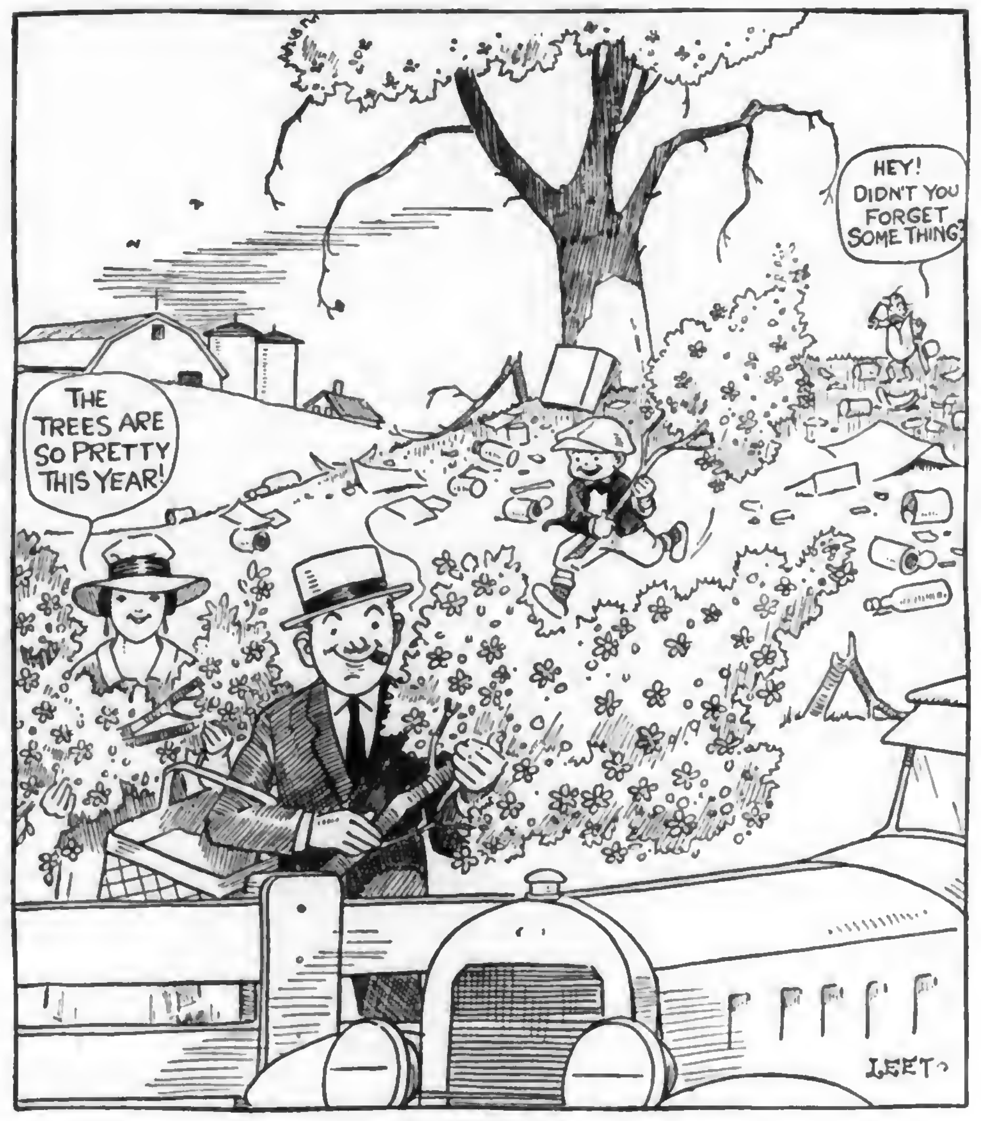
ROAD WIDENING.—Plans are to be made immediately to carry into effect the bill authorizing the state to record intention to widen highways at some future day so the building lines may be maintained. The act has been gone over by the attorney general who finds the authority ample for reservations. Effect will be that where the state finds in some future day a road will have to be 100 feet wide and it does not have the money to handle the proposition now it can place notice of intention to widen the road on record at the court house.

RUSH FOR CATTLE TESTS.—Experience of state authorities in charge of the testing of cattle for tuberculosis is exactly what was expected when word that over $2,000,000 would be available for indemnities became known. The Bureau of Animal Industry is listing applications in order of receipt and Secretary Frank P. Willits says no favorites will be played. Testing is now in progress in five counties with the applications from nearly forty more, as alreay stated in this letter.

THE NEXT SHOW.—Secretary Willits has taken time by the forelock and announced next winter's State Farm Porducts Show will be held here January 18 to 22nd. One of the changes proposed is for the mass meeting to be held Tuesday evening instead of Monday. Harry E. Klugh will be manager again.

BULK MILK EXCLUDED.—State authorities are being kept busy explaining the new state law relative to sale of milk in original containers does not apply to sales in bulk or to homes, but to place where meals are served. The act has been in force as a matter of fact in many parts of the state by voluntary action for months.

CARE FOR TREES.—As a result of the plans worked out by the State Highway Department with local authorities there is less complaint about the manner in which trees have been trimmed along main highways and some of the county roads. Telephone and telegraph companies have also joined in the plans in some localities.—Hamilton, Harrisburg.



HEY! DIDN'T YOU FORGET SOME THING?
THE TREES ARE SO PRETTY THIS YEAR!
LEET

The Nature Lovers

New Jersey Letter

POULTRY SHOW PLANS.—The New Jersey State Poultry Association directors were meeting at New Brunswick on May 23 to prepare the schedule of poultry shows in New Jersey for the coming season. Associated with the group were several national poultry show authorities, working with the New Jersey association to develop schedules that would not conflict with important show dates in various parts of the country. General plans for improving the shows in the way of practical and educational values were considered. Farm flock classes will be encouraged this coming year and with New Jeresy a growing poultry and egg producing state the coming season predicts considerable development of the interest in poultry shows.

LICENSE NUMBERING REVISION.—The New Jersey State Motor Vehicle Department has been so embarrassed with pressure for granting of low license numbers that Commissioner William L. Dill announces his intention of introducing a new system which will eliminate the small numbers entirely. The plan next year will be to designate each county by letter and start the numbers within the county at 1001. The Department states that this plan will eliminate the appearance of favoritism in the granting of low license numbers and will abolish the vexatious trouble which the License Bureau annually experiences from those who consider themselves to be the favored few.

FARM BUREAU NOTES.—At the recent meeting of the executive committee of the New Jersey Federation of County Boards of Agriculture, Secretary H. E. Taylor was authorized to employ a man for several months to work with the member county boards needing help in their membership work. The action was taken at the request of members from various counties who state that considerable potential membership has been neglected due to the lack of competent local solicitors in many of the counties. The state office will now take over a part of this membership responsibility.

STATE FAIR DATES.—The Trenton Interstate Fair comes this year September 28 to October 3. Altho too early in the season for detail in the conduct of the agricultural phases of the fair, the management has expressed its intention of increasing the facilities in the farm departments and of adding to the prize lists in a number of the competitive classes.

FARM ACCOUNTING CLASSES.—During the last season the New Jersey Extension Service conducted thirty-three farm accounting schools in seventeen New Jersey counties. More than 400 farmers attended. Eighteen of the schools were held for new men who wished to learn the principles of simple bookkeeping while the other fifteen took up the subject of closing and summarizing annual accounts. The Extension officials report that more general keeping of accounts has enabled farmers to effect credit arrangements at the local banks.—B.

New York Letter

SUMMER TRAINING FOR RURAL LEADERS.—The State College is this year putting on a rich list of opportunities for farm folks who feel the need of training in community leadership of all sorts. There are special six-week courses, beginning July 7, in pageantry, dramatic production, recreational leadership, rural community organization and social problems of rural communities, each with specially fitted instructors. An unusually heavy enrollment is expected.

FARM POPULATION CHANGING.—There are 165,000 less persons on the farms of the state than in 1917 and 8000 less than a year ago. Men can earn more money in other occupations. There are 50,000 less hired men in the state than in 1916, when the war had drawn away what was then considered a very unusual number. Farm production is being maintained by the use of labor-saving machinery, trucks, and autos, but after the necessary work is done little is done towards keeping up the farm buildings, fences, or drainage, and thus many farms have a neglected appearance.

CATTLE PRICES.—The spring sale of the State Holstein Association at Earlville attracted buyers from three outside states. A total of 131 head of purebreds was sold by twenty-one consignors, in two days, at an average price of $127 per head, including young calves. The highest price paid was $350 for a cow from the Hartshorn herd of Hamilton. Three cows with seven-day records of over thirty pounds of butter were sold, and five bulls with dams of equally good records.

A NEW METHOD OF VICTIMIZING.—Men posing as government eye specialists have worked outlying rural districts getting war veterans to submit to eye examinations. One man "examines" while the other looks over the place and loots it then or later. They got about $3000 worth of stuff in western New York in this way. They are thirty-one and thirty-seven years old and are thought to have practiced the same game in Minnesota.—M. G. F.

Let GRAVITY do the WORK!

The Unadilla *does away* with the *back breaking work* of tossing tons of silage out over your head. The air tight, water tight, doors that cannot stick or freeze, have the *additional advantage* of giving *continuous opening* at *level of the silage!* You simply push the silage out —*gravity* does the rest.

Door fasteners form a permanent safety ladder—convenient and secure. Hoops are easily adjusted *from this ladder.* No dangerous adjusting from easy-slipping ladders. Write today for our big catalog and for special discounts on early orders.

Easy payments if desired!

The Neshaminy Gardens

(OUR FARM)

Where an Editor Works and Thinks

THE following letter received from a Chester County reader will serve as a text for part of this week's notes:

"Every so often in your 'Think' column, now Neshaminy Garden column, you have something about fruit growing and I would like to get a little more information. Some one who thinks it does not pay has asked me, 'Does fruit growing pay?' Recently, a hardware merchant earnestly asked me the question. The only way I can answer him, since my own seventy trees are not yet bearing, is to find out from someone else. So, I wonder if you have any suggestions for anyone who might want to look in, say some summer day. How would you feel if some fruit grower, possibly not looking like one, suddenly appeared at Neshaminy Gardens and wanted to see your young apple orchard? Would you refuse permission or would you let the work go and show the place? I would like to see how others manage their trees.—B. R. J."

✦ ✦ ✦

ANSWERING the last question first we will say, come ahead. We are right on a good hard road (the Buck road) close to Newtown. As yet we have no sign telling the name of the place but hope to have one later. We enjoy having visitors, altho we hope they do not come expecting too much. It takes a good while to get a place ship-shape. If the writer is not there, some one else will be found any day that is fit to work.

✦ ✦ ✦

THERE is no definite answer to the question, "Does fruit growing pay?" It is like every line of business. There are too many "ifs" and "buts" to make it possible to give an unqualified answer. IF the would-be fruit grower is a lover of trees, IF he has patience and a knowledge of the business, IF he is industrious and performs the many operations in the right way at the right time, IF he has the right varieties and has them planted on the right kind of soil, and if he "picks, packs and peddles" them so that that they will bring top prices, IF he does all these things and has these qualities he will make it pay. BUT—But I shall not start in on the "buts." One can find living (or dying) examples in almost every neighborhood, enough to prove that many people do not make fruit-growing pay.

✦ ✦ ✦

WE FIND one spot in our young orchard which causes the hair on the back of our neck to stick straight out, especially when we remember that some narrow-minded, short-sighted member of the legislature introduced a bill last winter putting woodchucks on the protected list. I noted in this column last fall that several trees had been girdled by groundhogs. Seven or eight trees have failed to start this spring and will have to be replaced. We hope Mr. Woodchuck also failed to wake up after his winter's sleep. It is a satisfaction to note that the bill referred to failed of passage and that fruit growers have not been still further subjected to damages by having groundhogs protected.

✦ ✦ ✦

IT IS usually good policy not to follow the crowd in planting crops. In this respect we are taking our own advice and will not plant more than two acres of sweet corn. Last year the crop was short and poor, consequently prices were away above the average. Because of this, truckers and even general farmers are putting out big acreages of sugar corn and, if the season is a good one, the probabilities are that it will not pay. If farmers in general would but use ordinary horse sense in production they would not be so often subjected to loss thru glutted markets.

✦ ✦ ✦

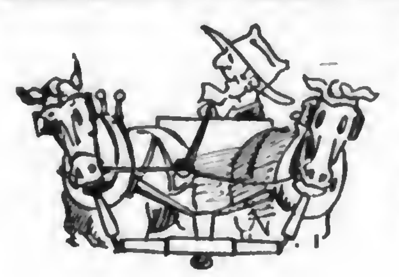
UP TO the middle of May both the temperature and the rainfall have been below normal and the growth of vegetation has been slow. Only about one-half inch of rain fell in this section during the first half of the month. The soil at Neshaminy Gardens is very retentive of moisture and nothing has suffered from lack of it as yet, altho we do need more heat. Grass, peas and potatoes are doing very well and we had new radishes on the fifteenth of May.

✦ ✦ ✦

WE PLANTED our melons just one month earlier this year than last and if they do proportionately well we shall be satisfied. In addition to the usual kinds we are trying Honey Dew and Hearts of Gold muskmelons. The latter is a new, much extolled variety and the former is in a class all by itself—providing it has time enough to ripen. There is no reason why fine melons of good quality may not be grown in the East, providing intelligent care is given. Unfortunately, too many poor, immature melons are sent to market here and that gives them a bad reputation.—R.P.K.

THE CHEERFUL PLOWMAN

The Team That Pulls Apart



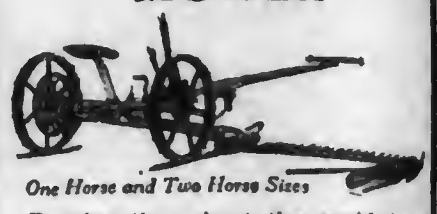
I FIND it hard to drive old Prince along with dappled Ned, for they pull sidewise and apart as much as straight ahead. Each is a strong and able horse with strength and pep to spare, and each can work for seven days and never turn a hair. Put Prince with Bill he staves along as nice as one could ask, he strains his collar with his weight at any kind of task!

Put Ned with Boss and off he goes as happy as a bird, into his collar with a snap and not a kick is heard! But hitch up Prince with dappled Ned and, sure as sure can be, they start at once to pull apart, to going haw and gee. I can not break them of the trick no matter what I say,—they always do, and always will, behave that naughty way!

Sometimes they vex me quite a bit, I chafe to beat the Dutch, but after all, it seems to me, I must not say too much; for horses, one must understand, are like some folks we know, who hitched with certain other folks despise like sin to go; they angle sidewise and apart, as do old Prince and Ned, instead of bracing for their task and pulling straight ahead!

With other folks these certain folks will work as smooth as silk, as will those certain other folks when hitched with certain ilk, but hitched together, land alive, they waste their time and powers and do not do in seven weeks the work of seven hours. You can not break them of the trick no matter what you say,—they always do, and always will, behave that naughty way.—J. Edw. Tufft.

Frost & Wood MOWER



One Horse and Two Horse Sizes

Popular throughout the world for many years. Thousands of satisfied users. Built for heavy crops and rough and hilly land. Roller bearings assure light draft. Its cutter bar strength and superior cutting mechanism give long service.
The Internal Drive Gear is always ready for work in heavy or light crops. Quicker response at knife bar, less wear on gears and fewer repairs. The knives keep on cutting when bar is raised to clear obstructions, saving time and crop. Sizes 3½, 4, 5, 6 and 7 feet.

POLAND TO BE HOST

ongress of Agriculture Will Hold Sessions in Warsaw Next Month

HE Twelfth International Congress of Agriculture will be held Warsaw, Poland, on June 21 to th. Like the preceding congresses, has been organized under the tronage of the International Comission of Agriculture. Official deles from different governments and blic institutions will participate in e sessions of the Congress.

The topics to be included in the gram will consist of rural econy, the relation of capital and to the organization of agricull enterprises, the comparative of large and small farms, inational commercial credit, labor, control of plant diseases on an ernational scale, standardization agricultural production, new thods of combatting drought and official use of commercial ferti-

Problems relating to animal prolon, particularly the importance breeds, methods of feeding, etc., also be considered. An import place on the program is assignto agricultural industries such as manufacture of beet and cane r, canning, preserving, drying.

Three Official Languages

is expected that the number of eign delegates may reach possib200 or 300 or more, from sixteen erent countries. French, English Polish will be the official languages, altho delegates unable to use of these will be permitted to ad the meetings in their own guage. In this case, however, the akers will be expected to present, least twenty-four hours before ir address in the meeting, a summry of their remarks either in nch or English.

mmediately after the end of the ions, an agricultural excursion oss Poland will be provided for. visitors will be given an opporlty to become acquainted with the ic attractions of Poland, includthe well-known virgin forest of owieza as well as of other large ests in the mountain regions of Carpathians. The full excursion, ich is to start on June 25, will on June 29 in the quaint medicity of Cracow.—J. G. Lipman.

Alfalfa Seed

RGENTINE alfalfa seed gives promise of being well adapted to berland County, according to ty Agent P. L. Edinger who rely inspected two alfalfa seed ce demonstrations. In the first, ich was planted in October, 1924, found that Turkestan, Arizona New Mexico varieties were not wing up very well. In the other onstration planting, started in ember 1923, he found that the an and Argentine varieties give ications of being a source of good for Cumberland County. In her of the demonstration plantdoes the Grimm seed show any erior merit.—A. L. B.

Novel Advertising

LOTHING merchants and millin ers in several cities used a novel of advertising for the Easter on. Attractive certificates were led to prospective customers inting that if one-fifth inch or e rain fell between 10 A. M. and P. M. Easter Sunday a rebate of $5 ld be given after Easter to every who purchased a certain article clothing before Easter.

rain check for that amount acanied each purchase and the of the checks issued was coverby rain insurance.

UNITED STATES TIRES ARE GOOD TIRES

It is a common saying among men familiar with all makes of tires that "a Royal Cord never wears shabby"

Trade Mark

EVEN after it has given far longer service than is expected of a high grade tire, a Royal Cord looks good—and *is* good—for many more miles.

This graceful ageing, this exceptional wear, is due to three great improvements in tire making:—

Sprayed Rubber.

Latex-treated Web-Cord.

Flat Band Method of Building.

These inventions are the exclusive properties of the makers of U. S. Royal Cord Tires

United States Rubber Company

U.S. Royal Cords

DR. S. W. FLETCHER,
Staff Contributor and Adviser
Head of the Department of Horticulture
Pennsylvania State College

Lane Drifts in Winter

We have a lane that drifts badly in winter and we have a notion to plant something about twenty feet back of the west bank to make the snow drift up there instead of in the lane. Is there something we could plant that would bear a useful crop and act as a snow breaker in winter; thus serving a double purpose?—H. & E., York County, Pa.

A row of evergreens, or an arborvitae hedge, would be most effective. There is no bush fruit that could be used to advantage, unless it be the High Bush Cranberry, Viburnum, which is related to the old fashioned snowball. The red fruit is very attractive and makes fair jelly.

A hedge of the common barberry would serve the purpose, were it not that it disseminates wheat rust. It is possible that fair results might be obtained with sour cherries, such as the Montmorency, planted in a double row, trees twelve feet apart, and alternating. One-year-old trees should be bought and the tops cut back to six inches high at planting. All of these plants are likely to prove rather poor substitutes for evergreens.—S. W. Fletcher.

Blueberry Culture

I saw an article in Pennsylvania Farmer on blueberry cultivation and am writing for some information. Do blueberries sell as well as the wild huckleberries and how long does it take before they bear after setting out? Is it too late to set them out this year?—Mrs. M. B., Armstrong County, Pa.

One of the best varieties of blueberry is the Rubel. These berries are much larger than the average wild berries, equal in quality, and should sell for a higher price. Write to Frederick V. Coville, Bureau of Plant Industry, U. S. Department of Agriculture, Washington, D. C., for Bulletin 974, "Directions for Blueberry Culture."

The plants bear lightly the second year after setting, but a good crop is not expected until the fourth or fifth year. It is too late to set them this year. Remember that they must have acid soil.—S. W. Fletcher.

Blossoms and Fruit

THIS is the season of the year to speculate on the coming fruit crop. Many growers know to their sorrow that a heavy bloom does not necessarily mean a full crop of fruit. The chief cause of failure, according to this authority, is unfavorable weather conditions during blooming time. Of these rain accompanied with a cold wind causes the loss of more fruit than any other adverese condition. Warm, sunny days followed by still, clear, cold nights are also dangerous to the fruit crop because the blossoms are forced prematurely during the day only to be injured by the low temperatures at night.

Several things may happen to interfere with the proper setting of the fruit due to adverse weather conditions, the most obvious being the washing of the pollen from the anthers by rain, injury of the pollen grains by chilling and by excess moisture, prevention of bees and other insects from working in the blossoms, whipping the blossoms from the trees by strong winds, and many other harmful effects.

While nothing can be done to control these weather conditions, something may be accomplished by selecting fruit varieties with regard to their ability to withstand adverse weather conditions, by resorting to suitable cultural practices to stimulate resistance to cold, and by exercising care in the choice of the orchard site.—Geneva Experiment Station.

Maryland Peaches

IN CERTAIN orchards in Washington and Allegany Counties, of Maryland, practically all peach buds have been killed, the injury varying in other orchards from ten per cent of the buds to ninety per cent, depending on the location of the orchand and the variety of fruit.

In one large fruit orchard near Picardy practically all the buds were killed. One orchard about four miles northeast of Hancock shows an average injury of about sixty-seven per cent, and another in this vicinity an average injury of twenty-seven per cent.

In one orchard in the Smithburg section all buds on old trees are killed. Howard and Wicomico Counties report no injury, but grower say the trees do not bear as ma buds as last year. Worcester County reports no injury from cold weather but a slightly decreased number o buds. In Frederick County the injury will mean from seventy-five 100 per cent loss.—Marylander.

To Speak on Cooperatio

SOME of the world's most distin guished authorities are to deliv er lectures at the sessions of th American Institute of Cooperatio which will be held at the Universit of Pennsylvania in Philadelphi July 20 to August 15th. Among th speakers will be Governor Giffor Pinchot, Secretary of Agricultu William M. Jardine, Secretary o Commerce Herbert Hoover, Frank O Lowden, former governor of Illinois Prof. O. H. Larson, of the Royal Agricultural College, Copenhagen, Denmark; Prof. C. R. Fay, of the University of Toronto, Canada; Kar Walter, of London, an authority o cooperation in the British coloni and Sir Horace Plunkett, noted Iri cooperative leader.

Special study of problems encoun tered in the marketing of vario commodities will be made during th session. In these seminars, the fir week will be devoted to a study o grain, livestock, dairy products an supply-buying; the second week fruit, vegetables, poultry and eg and dairying; the third week to fru milk, butter and cheese and manu factured milk products; the four week to cotton, tobacco and dai products.—J.

Garden and Truck Crops

Manager Pomona Gardens, Newark, Delaware

Care and Condition of Young Plants in Delawa

FREQUENT attention to the celery beds is needed to be sure that the covering is not left on the seeds too long. Thin burlap may let enough light thru to make the tiny plants green and prevent them from getting spindly, but heavy burlap makes them white and thin. If they have come up in dense shade it is usually wise to remove the shade gradually, or to provide half shade for a few days.

* * *

Tomato plants for the cannery are far behind schedule in Delaware, and germination of seed has not been good. If anywhere near the expected acreage is put out, there will be the usual scramble for plants. Canners who have noticed this hunt for plants in recent years say that they must have their own plant beds simply as insurance that there will be plants enough to supply their own growers. At Harbeson about 150 acres of early plants are being put out. These were grown under muslin by Mr. G. A. Rust, superintendent of the local cannery.

Growers are setting the early varieties three by four feet instead of four by four as with late varieties, and are expecting to have some troubles with cutworms, as is usually the case with early set plants. It would probably be good policy to plant the early canning crop on land that had been cultivated the year before, to reduce cutworm injury. Crimson clover land could then be saved for the later plantings which will evidently be made this year early in June. Georgia-grown plants are to be tried in one locality this year.

* * *

Two difficulties are met with when lettuce plants are set in the open field. If the plants have been grown thickly in the seedbed, they will very soft and easily killed by a f hours of hot sun, unless water be supplied. Then if the surface is dry and loose, some of it usu gets next to the lettuce roots, wh careless planters are at work, this means quick death except wh irrigation or a rainstorm is at ha

I usually like soil firm right to the top, not cultivated since last rain, provided, of course, does not mean a very long ti Nearly all the plants will take quickly under such conditions, as soon as they have raised th heads the wheel hoes can get b

Of course, the ground could worked over much more quickly w horse or tractor implements bef planting than after, but the gain stand of plants is worth while. W hardened cabbage plants do not s fer so much from mixing of dry with moist around the roots.

* * *

New York lettuce in frames sho clearly the necessity of providing least a square foot of space for eve plant of this large growing sort. are tempted in the case of fra lettuce to crowd the plants a lit to get more of them, but it does pay. Even a shortage of one inch spacing will delay the heading of t variety, and if hot dry weat comes many of the crowded he will run to seed.

For a perfect crop of New Yo on good land fourteen inches ea way is not too much. In the fiel do not believe that the allowance several feet between rows will let plant less than a foot apart in row. In the fall there is much l danger of the plants going to se but they do not make solid hea when crowded under any conditi nor at any season.—W.C.P.

Swollen Combs

We have noticed lately that about half a dozen of our hens in a flock of 300 Leghorns have developed swollen combs. The comb gets to be five or six times its natural thickness and is hot and feverish. Hens have bright eyes but seem pretty good otherwise, some are laying, too. We do not know whether this is going to be a harmful condition or not. Sometimes the wattles swell a little, too. Do you know what is the cause of this condition or what does it indicate?—H. & E., York County, Pa.

I think the swelling of the combs ay be due to bruising or rough reatment from the activities of the ale birds. Sometimes the wattles f a hen swell and contain a watery bscess which makes the skin hot nd feverish. This can be lanced and rained and washed with mild disin- ectant. Sometimes a leathery yel- ow pus gathers and has to be picked ut of the wound before complete ealing results. This condition does ot seem to be contagious or per- anently injure a bird showing the welling.—R. G. K.

Spread of Blackhead

Would you please tell me a cure or a preventive for blackhead in turkeys?—C. H. C., Butler County, Pa.

I cannot recommend a cure for lackhead in turkeys as all the medi- ines used for that purpose have roven more or less unreliable. The isease can often be prevented by tarting with healthy stock and giv- ng it plenty of range on soil not pre- iously contaminated by sick urkeys. The disease is spread by eans of the droppings and contam- nated soil seems to have the power o infect the birds for a long time. eeping the turkeys away from hickens is a help in preventing sick- ess in the turkey flock.

When blackhead is killing the ults so that there is no profit in ght it often pays to raise chickens gees instead of turkeys until the ll cleans up.—R. G. K.

The Ventilation System

I am planning to build a shed-roof brooder house ten by twelve feet. How high should it be in front and in the rear?

The thing that puzzles me is the ventilation system to use and how to apply it. Kindly note the following:

Where and how should the glass window be placed? Give size of windows, sash and lights. What special provisions should be made for ventilation thru the window? Is there any convenient way of arrangement for the operation? How much muslin space should be provided? Is there need of any additional ventilation in the rear or top of the building?—W. A. B., York County, Pa.

We have good success with colony brooder houses of the shed-roof type which are six feet high in the front and four feet in the rear.

Satisfactory results in ventilation can be obtained by using one large window four feet wide and three feet high placed one foot from the door. It can consist of twelve panes. With the door in the front of the house the window can be placed between the door and the other side.

Between the top of the window and the roof have a narrow opening, one foot wide and four feet long. Instead of muslin I cover this opening with a frame on which is stretched the porous sacking material which is used in bags of feed and oyster shells. This coarse cloth permits the air to pass thru. Muslin curtains soon become clogged with dust and are of little value in ventilation. All curtains must be brushed occasionally to keep them clean and of value for ventilation.

Windows Are Hinged

In my colony houses the open spaces are protected with strong hardware cloth nailed on the inside. The windows open outward and are hinged so they can be taken off if necessary. Additional ventilation for hot weather can be provided by having hinged openings under the back of the roof. They should be very small to avoid too much draught.

The cloth covered frame above the window can be braced open with a short stick if the colony houses seem too warm. The stove brooder should be placed at the side of the house, away from the window and slightly toward the back. Then the chicks can find cooler air at the other side of the house up in front of the window

Bulletins May Help You

There is no definite plan for building colony houses that seems better than others and all poultrymen build them more or less according to their own ideas. I would suggest that you write the Division of Publications, U. S. Department of Agriculture, Washington, D. C., for bulletins on poultry house construction. A brief visit to some commercial poultry farms will enable you to sketch any types of colony houses that appear to be satisfactory. With a coal burning brooder stove and a sunny colony house the problem of ventilation is not great as the stove is constantly drawing air out of the house and fresh air replaces it.—R. G. K.

What Is the Cause?

I have a flock of fifty R. I. Red hens and they are dying with yellow diarrhea. They seem to live two weeks or so with it, stand around and will not eat and the last few days sit with eyes closed. Can you tell me what to do for them? I have 200 young chicks and I am afraid they will get it.—J. W. H., Susquehanna County, Pa.

A postmortem performed on some of the hens that die will show the condition of the internal organs, especially the liver, and give some clew to the cause of the trouble. Frequently bowel trouble is only a symptom of errors in feeding. Plenty of green feed and a balanced dry mash containing twenty per cent bran is of great help in preventing digestive disorders. Moldy grain, bad meat scrap or any kind of spoiled feed will soon produce bowel trouble in a flock

Keep the young chicks away from the old flock as much as possible. The use of mild disinfectants in the drinking water may help in preventing disease from spreading thru the water but will not make up for any feeding methods that may cause the trouble.—R. G. K.

OUR PROFIT SHARING PLAN
To keep our incubators filled to the last hatch we are making an unusual Profit Sharing Offer. Genuine EVER-SHARP Pens and Pencils given free. An order for 100 chicks brings you a gift. Our latest folder describes in detail the entire profit sharing plan. Write for it. It's FREE.

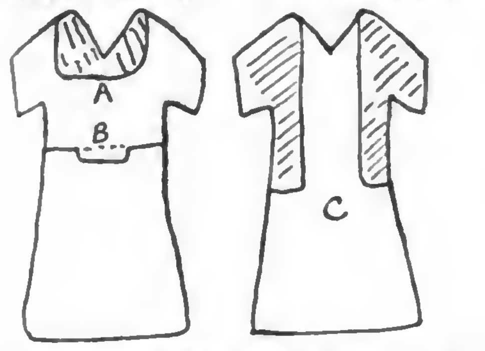
Over the Mending Basket

Little Tricks That Save Partly Worn Garments

PATCHES may be "honorable" but often they are not artistic. There is a science of mending that is well worth any housewife's consideration.

Avoid many small patches. Not only do they look ugly, but they require more time and are not as efficacious as larger ones.

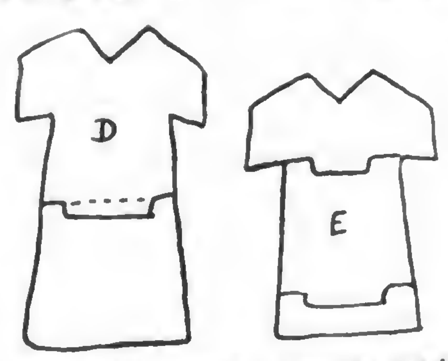
The upper part of nightgowns wears out while the lower portion is still perfectly good. If the material begins to give way round the neck, add a piece as in illustration "A," stitching it smoothly in place on the outside of the garment. In case the whole upper portion of the garment is getting weak, cut a new top and attach as shown in "B" in the drawing; cut away the old upper part in this instance.



The new portion need not be like the old. Checked lawn, figured voile, or any suitable material in the piece-bag can be utilized with very pleasing effects. Such repairing is quickly done and will last as long as the garment.

When Dresses Wear Out

Illustration "C" shows how a dress can be quickly mended that has worn out around the arms or that was originally a slip-over to be worn with a guimpe. Cut away the old material at the sides; then lay the garment on a pattern and mark where it is cut. Cut the new side portions of contrasting material if desired. A completed dress can be quickly made that is good for school or home wear.



Two Gowns that Work as One

"D" shows how portions of two dresses may be combined, sewing either straight across or as otherwise illustrated. A dress that is good in most respects is often too tight in the yoke or too short in the skirt for the growing girl.

It is an easy matter to cut new portions as in illustration "E." These may be of contrasting material or of the same material as the dress, with a bit of braid or piping as a finish. A too-tight dress is never comfortable and is soon worn out, so this repairing is well worth while and does away with all subsequent mending.

Children's union suits are quickly torn and worn out if they have become a little snug thru repeated washings and because a child is constantly growing. Much mending will be avoided if these garments are cut at the waistline and a wide belt of material cut from an old suit is set in. This same plan works well in the case of children's pajamas and sleeping drawers.

When knitted underwear gets thin, cut large pieces from old garments of similar material and sew smoothly on the wrong side, using soft darning cotton to catch-stitch in place. This is easy to do if done before the material actually breaks, and such mending will last as long as the garment is usable. Neither will the garment look unsightly as it does when covered with a multitude of small patches.

Before discarding old coats and trousers, cut out all good pockets, as they are useful in repairing worn-out pockets. Pieces of very stout material should be retained for this purpose also.—Alice Margaret Ashton.

A Day's Meals

For a Child of Two

BREAKFAST.—Juice of one-half orange; whole-grain cereal mush; milk, two-thirds cup, or more if wanted; toast; butter.

DINNER.—Coddled egg; baked potato; spinach; bread; butter; pulp of cooked prunes; cookie.

SUPPER.—Milk, one and one-third cup, or more if wanted; whole-wheat bread, butter.

For a Child of Five

BREAKFAST.—Baked apple; whole-grain cereal mush; milk, one-half pint, or more if wanted; bread; butter.

DINNER.—Boiled potato; creamed codfish; string beans; bread; butter; cup custard; cookie.

SUPPER.—Milk, one-half pint, or more if wanted; whole wheat bread; date marmalade.

For a Child from Eight to Ten

BREAKFAST. — Berries; whole-grain cereal mush; milk, two-thirds pint, or more if wanted; bread; butter; sugar, 1 level tablespoon.

DINNER.—Beef stew with potatoes and carrots or tomato; bread, butter; tapioca cream; ginger snaps.

SUPPER.—Cream of lettuce soup; graham bread toasted; butter; honey or sirup; milk if wanted.

Delivered at the Door

IN OUR section farmers have organized and are trying to get enough patrons to insure delivery of ice three to five times a week during the summer. Of course, out of the way neighborhoods can not hope for this convenience, but when there are several small towns or villages to be served it is easy to arrange.

For example, a large truck starts from our county seat and delivers ice at homes along the way to the first village, a distance of nine miles. Farmers must be on hand to get their ice but that is no hardship in the early morning. It is three miles from one village to another and those wishing ice along the cross road are served.

Farmers are realizing that it is economy to get large and well made refrigerators, as a 100-pound manufactured cake of ice lasts longer tha four twenty-five pound pieces bough separately. They are also providi the coolest places possible for keep ing ice and not wasting it. A smal refrigerator is an ice waster any where, but particularly on the far where many visits must be made t it daily and the outer air is admitted often.

Many farmers who are often i town buy their ice there but mor who live on the highways are avail ing themselves of the opportunity o having it delivered.—Hilda Rich mond.

Give Them a Chance

NO OTHER piece of househ equipment repays in service re dered to any greater degree than t carpet and vacuum sweepers. T carpet sweeper is a necessity in eve home and is in use every day, usu ly many times each day. If one is so fortunate as to have an electr sweeper, the ordinary vacuum swe er does good work—if it has t proper care.

The carpet sweeper brushes t dirt from the carpet into little d pans on each side which it carr along with it. Obviously it cannot its best work if the brush is allo to become matted with string, of thread, hair and so forth. If i not cared for as it should be it make a dust when used, thus def ing the ends for which it is tended.

Remove Dirt and Dust

First take the sweeper apart clean thoroly. Remove all dirt dust from the inside. Clean the carefully. After the brush is cle dip it into a bucket of hot water which a half cup of kerosene been added. Set in the sun to d

Now take the sewing machine can and oil sweeper carefully. carpet sweeper cannot work wit oil any better than farm machin can but it is often sadly neglected.

Follow the same process in cl ing the vacuum sweeper. The vac sweeper should never be put a with dirt in it. If you go over rugs every other day with the v uum sweeper clean the dust bag time before putting it away. Be to dip the brush in hot water which kerosene has been added. makes it more effective in taking dust.—May H. Mumaw.

Do Your Own Paperhanging

You Won't Find It Difficult and It's a Lot Cheaper

WHEN spring comes there are usually some rooms that have to be papered. To pay the extortionate prices charged by even indifferent workmen is almost out of the question, so I learned to hang paper, and do not find the work difficult. Paper for two or three rooms can be bought with the money required to pay a paperhanger for papering one room.

Choosing Paste and Paper

The paste I make of either starch or wheat flour and add a bit of powdered alum or a spoonful of glue. Choose papers having an indistinct pattern, especially for ceilings, if you are a beginner, as defects in matching are not so conspicuous. If there is a pattern in the paper for the side wall, the matching can be done with less waste if strips are taken from two rolls alternately.

Avoid large figures. The effect of pictures hung against them is spoiled, and unless the room is large it is made to look stuffy. For low rooms a very narrow border or a molding is to be preferred. On plain paper a stencil design replacing the border is effective. Use white paint for the stenciling and a very narrow design if the ceiling is low.

There is often trouble getting the paper to stick to a board wall when it is papered the first time. If there are large cracks, muslin strips should be pasted over them and tacks driven thru the strips at intervals of two or three feet.

Before hanging the wall paper it is best to apply a foundation paper. Building paper soaked until it begins to soften, and then applied, will tighten as the moisture leaves it, and give a smooth tough surface. Lacking the building paper, lime sacks may be used. Cut out the bottom and open down the seam, then carefully split the paper, which is composed of three layers. It may be divided into two or three sheets. The resulting squares are easily handled. Paste on the wall, placing carpet tacks about six inches apart along the edge at the ceiling, and another row just above the baseboard.

A row of tacks, about six or eight inches apart, should be driven around door and window casings to prevent the edges of the paper from curling as they dry.

How to Apply the Strips

The strips of wall paper are cut at least an inch too long and brushed firmly down. Then a knife is drawn lightly across the paper where it meets the baseboard. The end of the strip is drawn out from the wall and cut carefully across the line left by the knife before being brushed down permanently. In hanging paper, as in all work, it is the finishing touch that gives a workmanlike appearance to the product and a sense of satisfaction to the worker.—Mrs. M. C. S.

READING of the great uses which others would put this tra time each day, has set me a-w dering. Living on a paltry twe four-hour day all my life has me so busy that I'm sure I sh find occupation for any additio time if the earth would only rot a bit more slowly.

Yet, knowing my own propen ties and the use to which my ti is now put, I doubt very much should occupy any additional ho more profitably than the present lowance. It is well, however, to and consider whether I can emp my time to better advantage omitting this and substituting th

Living is such a steady bus while one is at it!—Vida M. Bate

For Our Ambitious Weavers

A More Elaborate Flower Basket This Time

MATERIALS needed:

Six long strands No. 3 round reed.

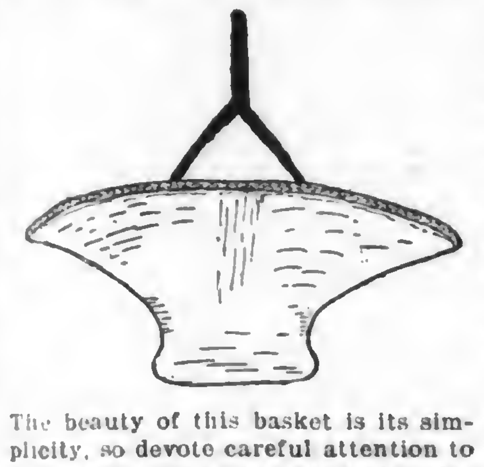
Five long strands No. 2 round reed.

One long strand No. 5 round reed.

One long strand No. 1 round reed.

All working supplies mentioned in previous lessons.

Cut sixteen forty-four-inch spokes of No. 3 reed. Coil your No. 2 strands for weavers and soak both coils and spokes thoroly. Separate your forty-four-inch spokes into groups of four, and make the same Indian center as in the sewing basket (March 21 number), weaving until your base measures three and one-half inches in diameter. Do not cup the shape quite as much as in the sewing basket. Your spokes are now in groups of two and need another soaking.



The beauty of this basket is its simplicity, so devote careful attention to the shaping, weaving over and under carefully.

Up Go the Spokes

After soaking bend the spokes up severely, holding them firmly with the left hand upward and inward, while you weave two inches, using the two weavers in the over-and-under weave explained in previous lessons. Your basket diameter should decrease to about two and one-half inches,—just a good size to hold a glass for water. At this point start shaping outward, weaving one more inch. Then separate your spokes into singles, using the "pairing arrow" taught and pictured in the fern basket lesson.

And Now the Shape

Now for artistic shaping. Moisten your work frequently and keep the sides of your basket flaring outward gently while the ends roll outward sharply as you weave over and under (with two weavers) until your basket measures six inches in height.

Complete the basket sides with another "pairing arrow." Then soak your spokes thoroly. Finish with any of the borders given in previous lessons. Trim off the spoke ends neatly with a slanting cut.

For the handle, whittle two thirty-inch pieces of No. 5 reed to points and insert them on one side of your basket, to the outside of the two spokes nearest the center spoke. (See illustration.) The center spoke must lie between. Push the ends down well and evenly. Then wind them over and over each other, making a neat rope. Now insert the two free ends beside the two corresponding spokes on the opposite side of the basket. Use No. 1 reed to firmly sew the handle (under the border) to make it more secure.

This basket is pretty left natural color and shellaced to prevent its being colored by dust. Or it is very attractive stained green or finished in black enamel.—G. S. S.

Bad Dreams

A YOUNG woman who boasted of her ability to "drive" thru harvest, housecleaning and other hard times, not sparing herself one whit in keeping up her regular housework, was quite vexed at her husband's answer to her complaint of restless sleep and terrible dreams. That unfeeling but truthful gentleman pointed out that overwork was the cause of her restlessness and terror.

She was one of those beings that in New England would be said to have "faculty" because she could apparently accomplish more than anyone in the community. But husband foresaw that he would be a widower early in life, or else caring for a broken down, helpless invalid if she did not slacken her pace. The bad dreams were to him a warning that her body and mind needed rest, and there is good reason to believe that he was right.

Exhaustion Means Unrestful Nights

Why do doctors advise mothers not to let their children romp and race just before going to bed? Why are we cautioned to feed the little ones only simple, easily digested food in the evening? Why are we urged to send them to bed with happy thoughts, quietly, before they are quite worn out? To avoid bad dreams and terror. And as we are only children grown tall, it doesn't pay us any better to let ourselves go until we are entirely exhausted.

Some people profess to believe that troubled dreams are a sign of approaching illness and danger. In a way perhaps they are right. Horrible dreams can often be traced to wrong habits of living, and if not corrected these wrong uses of our bodies will lead to mental or physical breakdown.

Many healthy people say they never dream at all. This may be the ideal condition, tho they miss the exhilaration that comes from pleasant happy wandering thru dreamland while the body is resting. One thing is certain, and that is that the individual who persistently loses sleep, and dreams horrible things, should leave no stone unturned to correct the tendency. The best plan is to keep quiet evening hours, eat simple food and do healthful work that stops short of overwork.—Hilda Richmond.

From Our Readers

Dear Editor:—I wish to thank Mrs. E. A. Kern for the directions she published on curing furs, and to let her know that I had the best of success.

Our Home Page is a wonderful help to me. There are always so many good recipes and helpful ideas on sewing and for the home. I would hardly know how to keep house without it.—Mrs. C. I.

• • •

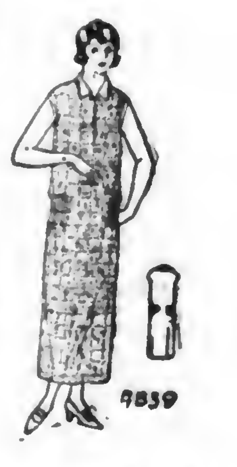
Dear Houshold Editor:—I find your page very interesting and helpful, and it seems to me you always have answers, directions or suggestions for everyone needing help. I am writing to know if anyone can tell me what to do with men's coats. They are of good material and in fair condition, but the trousers are worn. Hence the coats are discarded, but too good to throw away.—An Interested Reader.

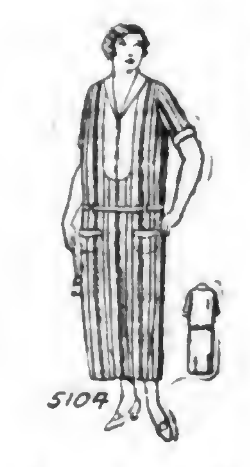
Cool Frocks for Summer Days

Directions for Ordering.—Give figures and letters of each pattern exactly as printed at beginning of each description. Give bust measures when ordering waist patterns, waist measure for skirt, and age for children's patterns. Address Pennsylvania Farmer, 261 S. Third Street, Philadelphia, Pa.

4839.—A Summer Frock.—Nothing so cool and comfortable for warm days as the style here portrayed. The fulness at the waistline is attractively disposed of in tiny plaits or tucks. Seven sizes: For misses 16, 18 and 20 years, and for ladies 38, 40, 42 and 44 inches bust measure. A 38-inch size requires 3½ yards of 40-inch material. Collar and sleeve facings of contrasting material require one-quarter yard. The width at the foot of the dress is 1½ yard. Pattern, 10 cents.

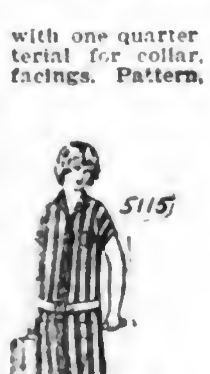
5104.—A Dress for Stout Women.—Striped flannel, gingham or percale may be used for this model. Eight sizes 40, 42, 44, 46, 48, 50, 52 and 54 inches bust measure. A 42-inch size requires 4¾ yards of one material 36 inches wide. The width at the foot is 1⅞ yard. If made as illustrated the dress will require three-quarters yard of plain material, 36 inches wide and 4 yards of striped material. Pattern, 10 cents.

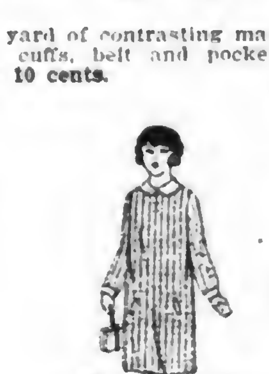




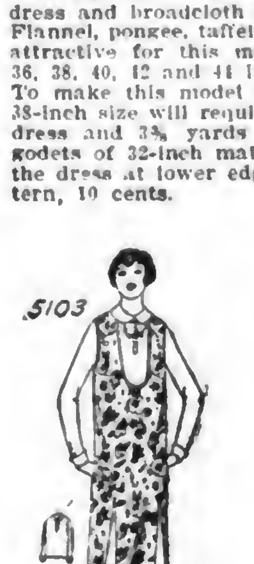
5115—For the Growing Girl.—Striped linen, gingham or flannel will be very attractive for this design. Four sizes: 6, 8, 10 and 12 years. An eight-year size requires two yards of 36-inch material. This style is easy to develop and easy to launder. It is fitted by shoulder and under-arm seams. Pattern, 10 cents.

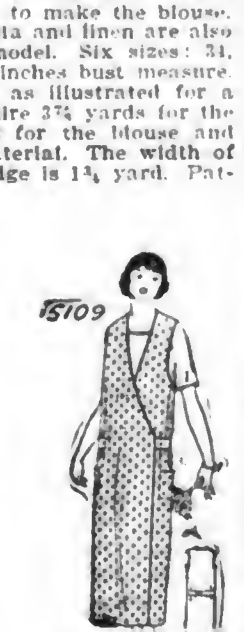
5116.—A Simple Frock.—Plaid or checked gingham or flannel would be both serviceable and pleasing for this style. Four sizes: 6, 8, 10 and 12 years. A 10-year size requires 2¼ yards of 36-inch material with one quarter yard of contrasting material for collar, cuffs, belt and pocket facings. Pattern, 10 cents.





5103.—Popular Jumper Style.—In this instance cretonne was used to make the dress and broadcloth to make the blouse. Flannel, pongee, taffeta and linen are also attractive for this model. Six sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. To make this model as illustrated for a 38-inch size will require 3¾ yards for the dress and 3⅜ yards for the blouse and godets of 32-inch material. The width of the dress at lower edge is 1¾ yard. Pattern, 10 cents.





5109.—A Protective Apron.—This is a good model for gingham, percale or crepe. The fronts are reversible. A finish of piping in a contrasting color, or rick rack braid would be pleasing. Four sizes: small, 34-36; medium, 38-40; large, 42-44; extra large, 46-48 inches bust measure. A medium size requires 5¼ yards of 27-inch material. Pattern, 10 cents.

Send 10c in silver or stamps for our up-to-date spring and summer 1926 Book of Fashions.

CANTON CREPE
GENUINE HAND BEADED
Ensemble Costume DRESS
ONLY $3.95 C.O.D.

From Forum Friends

Dear Cousin Ruth and Forum Friends:—Our school was out on the 28th of April. I went the whole term without missing a day or being tardy. On the last day of school we had a program of dialogues, recitations and music which our mothers came to hear. After it was over they had a surprise for us which was cake, candy and lemonade.

I have a pony that I ride to school. I have lots of fun with him; his name is Tony.—Ford W. Michael, Lycoming County, Pa.

Dear Cousin Ruth and Forum Friends:—I live in the country on a farm of six and one-half acres. We have a large apple orchard on it and I just wish I could give each and every one of the Forum members some apples.

I raised seven Buff Cochin Bantams last year and am going to raise some more this year again. I have two Bantam roosters.

Our farm is all level. We raise vegetables, a horse, a cow, two pigs and about fifty chickens.—Albert W. Shodd, Butler County, Pa.

Dear Cousin Ruth and Forum Friends:—I am twelve years old and live on a farm on the state highway. I am in the seventh grade and go to the Willingboro School in a bus that stops in our yard under an oak tree that is the largest one in New Jersey. We call it the Olden Oak Farm.

WILLIAM REED.
Centre County, Pa.

I take piano lessons and play every Tuesday and Thursday in the assembly at school. I have played at our Sunday school. We are trying to raise two little baby squirrels to be pets.—Berenice Pearle Walton, Burlington County, N. J.

Dear Cousin Ruth:—We live on a farm of 108 acres on the Cohansy River. We can see the Delaware Bay from our house. We have 100 little chicks which were hatched out April 20, which was my little sister's birthday. She was seven years old.

I have three sisters. We all like to sing. We are called the pleasing quartette. I am eight years old and am in the fifth grade at school.—Dorothy Mae Wheaton, Cumberland County, N. J.

Dear Cousin Ruth:—I like to live on a farm. I help my father do the work. We have two horses their names are Dewey and Flora.

My father goes to the curb market at Scranton, Pa., about every other day with tomatoes, corn and apples. I like to go with him. Our farm has about ninety acres in it. I have a patch of blackberries which will bear this year.

We have a radio. I like it very much and get many interesting things on it. I like to read Pennsylvania Farmer. There are many interesting things in it.—Leon Kircher, Lackawanna County, Pa.

Dear Cousin Ruth and Forum Friends:—I am eleven years old. I go to school in a bus every morning and go home in the evening. Sometimes we have to walk home, then we have fun. I live in a little village called Mickleys. It is in the country. When I go to school my little cat goes along with me.

I love to read the letters in Pennsylvania Farmer. I love to read about the animals and about nature in the letters. When I think of the Forum page I feel like dancing.

I had two pet cats but one got killed by an auto. His name was Tommy and the one living yet is Dorothy. We had a dog but he ran away.—Frances Wright, Lehigh County, Pa.

Dear Cousin Ruth and All:—Here I come again. I am going to tell you about a little wren. My mother has had a big gourd for thirty-five years and the other day she cut a hole in it and hung it up on the porch. The next day or so two little wrens came and built a nest in it. We watched the little bird while it gathered little sticks to put in the gourd.—Margaret Seylar, Adams County, Pa.

Dear Cousin Ruth:—I am a girl of twelve and live on a farm of 230 acres. We have a tractor which I run. For pets I have a white calf, one and a half years old, and four lambs which I feed with the bottle. I took the examination for seventh grade and made it. I took the examination last year but I was too young to go. I have two brothers, but no sisters.—Lorraine Confer, Centre County, Pa.

Dear Cousin Ruth and Forum Friends:—I live on a seventy-five acre farm, my father and mother do the farming. We have three horses and fourteen cows. My father bought 300 baby chicks. We have a brooder.

For pets I have two cats; their names are Squeaky and Kaiser. We have one little kitten, it is a Maltese. Its name is Tabby.

We have many birds in our locality, the common birds are robins and sparrows. We have a pair of wrens. Every summer they build in a bird house that my brother built for them. My brother made three bird houses. They are very pretty. I like to hear the song of the wren.

We have a piano and I am taking two lessons a week.

I was very glad to see Cousin Ruth's picture on our page. I hope we can have more contests.

Our school closed May first. The last day of school we played many games and had fun.—Lena Fretz, Bucks County, Pa.

Dear Cousin Ruth and Members of the Y. P. F.:—I am glad I am a member now. I am thirteen years of age and have four brothers and I am the oldest.

My dad has a car and I have a bicycle and I can ride it. My dad goes seventy-four miles to work and back. He works on the railroad.

Do you like music, Cousin Ruth? I do. I have a cornet.—Edward D. Keefawer.

Yes, I like music very much. I'm afraid tho there wouldn't be much music if I tried to play a cornet.

Dear Cousin Ruth:—I have not read any letters from Kent County yet so I thought I would write you. Our strawberries are getting ripe now. Mother has planted the flowers and some are up.

I go to Whiteleys School. I am seven years now but will be eight this month. We are planning to go to the field meet at Caesar Rodney May 15th. I like the farmer friends page very much.—Edna Steward, Kent County, Del.

I had a wonderful automobile ride thru your county last week-end, Edna. It was my first ride across the state. Your gardens are way ahead of ours and your strawberries—Well I was tempted to drive down later in the season!

Dear Cousin Ruth and Forum Friends:—I'll bet all the Forum members are glad that spring is here and summer is coming, well I know I am.

Yes, Cousin Ruth, I think that the Forum boys would like a page one week to tell all about their clubs and they could send a lot of pictures, too.

How many of the Forum friends went fishing? I have not gone yet but I intend to go, probably this week. My sister and some of our friends are going. I think it will be great fun.—Anna Marie Sinemus, Westmoreland County, Pa.

OUR YOUNG PEOPLE'S FORUM.

Cousin Ruth's Letter

Dear Forum Friends:—Well, at last I've really been to the circus—a sure enough one with elephants, and camels, and giraffes, and clowns, and all the rest! It was my first visit and I had the best kind of a time. What fun it would have been if we could all have gone together. While we were waiting for the gates to open you boys could have told me the secrets of pitching the tents, of unloading the animals and a hundred and one other things that I don't know about, and then once inside we'd have gotten acquainted with the menagerie and thrilled with excitement as acrobats swung dizzily in mid air.

As I look back to that gala night my memories are just about as mixed up as the network of ropes and pulleys in the top of the great tent seemed to be. Of course there was the grand parade to start with—then things began to happen so fast I can scarcely remember what did happen. Men climbed nimbly up poles balanced on another's shoulder, men and women swung and floated and walked thru the air, but best of all were the animals. Why a little, brown bear put me to shame when he went gaily riding by on his bicycle—I can't ride at all. Solemn looking seals had a game of catch, tossing balls back and forth from nose to nose, and baby elephants walked around on barrels with perfect ease. But the horses, black and white and sorrel, how you boys and girls would have enjoyed them. What beauties they were and what a sight it was when twenty-four of them performed to the commands of their trainer's voice and the crack of his whip.

And then there were little dogs, and trained pigeons, and crazy clowns, and I don't know what all. If I really got started telling of the night's fun I'd be writing three or four letters instead of one and that wouldn't do. If you've already been to the circus you know all about the fun, and if you haven't, well, you have something to look forward to.

Greetings to all my friends of the Forum,

COUSIN RUTH.

OUR LITTLE FOLKS' PUZZLE CORNER

Dear Little Folks:—This puzzle is one of changing letters so that the words become new ones. For instance: word number one is GAME, **you change the first** letter and find number two, which means "alike." You change word number three's second letter and get a word meaning "a few, not all." You change number three's first letter and get the name of a city in Italy. You change number four's third letter and get the name of a flower. You change five's letter and find a word meaning socks or stockings. Change number six's last letter and find a word meaning a man who entertains guests. Change number seven's first letter and get a word meaning "missing." Change number eight's second letter and get a word meaning the opposite of "first."

When you have found these words send them to me on a POSTAL CARD so that they reach me by June 6. BE SURE TO SAY HOW OLD YOU ARE. The ten children, sending in the correct answer, whose cards are the best in grammar, spelling, punctuation, penmanship and general appearance, will each be awarded a prize. Address all replies to the PUZZLE EDITOR, PENNSYLVANIA FARMER, 261 SOUTH THIRD STREET, PHILADELPHIA.

Puzzle Prize Winners

The answer to the puzzle published in May 9 issue of Pennsylvania Farmer is: (18, 2, 19, 7) LIVE, (8, 20, 21) TOM, (1, 2, 3, 4, 5) FIELD, (12, 13, 14, 15, 16, 17) HUNGRY, (34, 35, 36, 37) PIES, (21, 22, 23, 24, 25, 26) MOTHER, (38, 39, 40, 41, 25, 42, 43) CHICKENS, (28, 4, 29) ALL, (13, 44, 48) SHE, (6, 7, 8) SET, (45,37,46) ASK, (9, 10, 11, 12) MUCH, (20, 27, 31) ONE, (27, 22) NO, (30, 31, 23, 32, 33, 16) LETTER, (47, 18, 49) PED

The prize winners are: Valeria Benevento, age 12, West Berlin, N. J.; Florence Crawford, age 10, Montgomery, Pa.; Eugene A. Hoover, age 10, Newville, Pa.; Anna Lenceski, age 12, Cutchogue, N. Y.; Milton McLallen, age 10, Edinboro, Pa., David O'Donnell, age 9, Rea, Pa.; Oscar Edward Snyder, age 12, Everett, Pa.; William Thompson, age [illegible], Roaring Branch, Pa.; Elizabeth Van Nole, age 13, Kingston, N. J.; Mary E. Wert, age 10, McAlisterville, Pa.

THE LIGHT IN THE CLEARING

By IRVING BACHELLER

COPYRIGHTED BY THE AUTHOR

Continued

AS WE ate our dinner they told me an escaped slave had come into a neighboring county and excited the people with stories of the auction block and of negroes driven like yoked oxen on plantations in South Carolina, whence he had escaped on a steamboat.

"I believe I'm goin' to vote for abolition," said Uncle Peabody. "I wonder what Sile Wright will say to that."

"He'll probably advise against it, the time isn't ripe for so great a change," was my answer. "He thinks that the whole matter should be left to the glacial action of time's forces."

Indeed I had spoken the view of the sounder men of the North. The subject filled them with dread alarm. But the attitude of Uncle Peabody was significant. The sentiment in favor of a change was growing. It was now to be reckoned with, for the abolition party was said to hold the balance of power in New York and New England and was behaving itself like a bull in a china shop.

After dinner I tried to put on some of my old clothes, but found that my nakedness had so expanded that they would not cover it, so I hitched my white mare on the spring wagon and drove to the village for my trunk.

Every week day after that I worked in the fields until the Senator arrived in Canton about the middle of August. On one of those happy days I received a letter from old Kate, dated, to my surprise, in Saratoga. It said:

"Dear Barton Baynes—I thought I would let you know that my father is dead. I have come here to rest and have found some work to do. I am better now. Have seen Sally. She is very beautiful and kind. She does not know that I am the old witch, I have changed so. The others do not know—it is better that way. I think it was the Lord that brought me here. He has a way of taking care of some people, my boy. Do you remember when I began to call you my boy—you were very little. It is long, long ago since I first saw you in your father's dooryard—you said you were going to mill on a butterfly's back. You looked just as I thought my boy would look. You gave me a kiss. What a wonderful gift it was to me then! I began to love you. I have no one else to think of now. I hope you won't mind my thinking much of you.

"God bless you.
"Kate Fullerton."

I understood now why the strong will and singular insight of this woman had so often exercised themselves in my behalf. I could not remember the far day and the happy circumstance of which she spoke, but I wrote her a letter which must have warmed her heart I am sure.

Silas Wright arrived in Canton and drove up to our home. He reached our door at eight in the morning with his hound and rifle. He had aged rapidly since I had seen him last. His hair was almost white. There were many new lines in his face. He seemed more grave and dignified. He did not lapse into the dialect of his fathers when he spoke of the ancient pastimes of hunting and fishing as he had been wont to do.

"Bart," he said when the greetings were over, "let's you and me go and spend a day in the woods. I'll leave my man here to help your uncle while you're gone."

We went by driving south a few miles and tramping in to the foot of the stillwater on our river—a trail long familiar to me. The dog left us soon after we took it and began to range over thick wooded hills. We sat down among small, spire-like spruces at the river's edge with a long stretch of water in sight while the music of the hound's voice came faintly to our ears from the distant forest.

"Oh, I've been dreaming of this for a long time," said the Senator as he leaned back against a tree and filled his lungs and looked out upon the water, green with lily-pads along the edge and flecked with the last of the white blossoms. "I believe you want to leave this lovely country."

"I am waiting for the call to go," I said.

"Well, I'm inclined to think you are the kind of man who ought to go," he answered sadly. "You are needed. I have been waiting until we should meet to congratulate you on your behavior at Cobleskill. I think you have the right spirit—that is the all-important matter. You will encounter strange company in the game of politics. Let me tell you a story."

HE TOLD me many stories of his life in Washington, interrupted by a sound like that of approaching footsteps. We ceased talking and presently a flock of partridges came near us, pacing along over the mat of leaves in a leisurely fashion. We sat perfectly still. A young cock bird with his beautiful ruff standing out, like the hair on the back of a frightened dog, strode toward us with a comic threat in his manner. It seemed as if he were of half a mind to knock us into the river. But we sat as still as stumps and he spared us and went on with the others.

The baying of the hound was nearer now. Suddenly we saw a big buck come down to the shore of the cove near us on our side of the stream. He looked to right and left. Then he made a long leap into the water and waded slowly until it covered him. He raised his nose and laid his antlers back over his shoulders and swam quietly down-stream, his nose just showing above the water. His antlers were like a bit of driftwood. If we had not seen him take the water his antlers might easily have passed for a bunch of dead sticks. Soon the buck slowly lifted his head and turned his neck and looked at both shores. Then very deliberately he resumed his place under water and went on. We watched him as he took the farther shore below us and made off in the woods again.

"I couldn't shoot at him, it was such a beautiful bit of politics," said the Senator.

SOON the hound reached the cove's edge and swam the river and ranged up and down the bank for half an hour before he found the buck's trail again.

"I've seen many a rascal, driven to water by the hounds, go swimming away as slyly as that buck, with their horns in the air, looking as innocent as a bit of driftwood. They come in from both shores—the Whig and the Democratic—and they are always shot at from one bank or the other."

I remember it surprised me a little to hear him say that they came in from both shores.

"Just what do you want to do," he asked presently.

"I should like to go down to Washington with you and help you in any way that I can."

"All right, partner—we'll try it," he answered gravely. "I hope that I don't forget and work you as hard as I work myself. It wouldn't be decent. I have a great many letters to write. I'll try thinking out loud while you take them down in sound-hand. Then you can draft them neatly and I'll sign them. You have tact and good manners and can do many of my errands for me and save me from those who have no good reason for taking up my time. You will meet the best people and the worst. There's just a chance that it may come to something worth while—who knows? You are young yet. It will be good training and you will witness the making of some history now and then."

What elation I felt!

Again the voice of the hound which had been ringing in the distant hills was coming nearer.

"We must keep watch—another deer is coming," said the Senator.

We had only a moment's watch before a fine yearling buck came down to the opposite shore and stood looking across the river. The Senator raised his rifle and fired. The buck fell in the edge of the water.

"How shall we get him?" my friend asked.

"It will not be difficult," I answered as I began to undress. Nothing was difficult those days.

I swam the river and towed the buck across with a beech withe in his gambrel joints. The hound joined me before I was half across with my burden and nosed the carcass and swam on ahead yelping with delight.

We dressed the deer and then I had the great joy of carrying him on my back two miles across the country to the wagon. The Senator wished to send a guide for the deer, but I insisted that the carrying was my privilege.

"Well, I guess your big thighs and broad shoulders can stand it," said he.

"My uncle always said that no man could be called a hunter until he can go into the woods without a guide and kill a deer and bring it out on his back. I want to be able to testify that I am at least partly qualified."

"Your uncle didn't say anything about fetching the deer across a deep river without a boat, did he?" Mr. Wright asked me with a smile.

Leaves of the beeches, maples and basswoods—yellowed by frost—hung like tiny lanterns, glowing with noonday light, above the dim forest-aisle which we traveled.

The sun was down when we got to the clearing.

"What a day it has been!" said Mr. Wright when we were seated in the wagon at last with the hound and the deer's head between his feet and mine.

"One of the best in my life," I answered with a joy in my heart the like of which I have rarely known in these many years that have come to me.

WE RODE on in silence with the calls of the swamp robin and hermit thrush ringing in our ears as the night fell.

"It's a good time to think, and there we take different roads," said my friend. "You will turn into the future and I into the past."

"I've been thinking about your uncle," he said by and by. "He is one of the greatest men I have ever known. You knew of that foolish gossip about him—didn't you?"

"Yes," I answered.

"Well, now, he's gone about his business the same as ever and showed by his life that it couldn't be true. Not a word out of him! But Dave Ramsey fell sick—down on the flat last winter. By and by his children were crying for bread and the poormaster was going to take charge of them. Well, who should turn up there, just in the nick of time but Delia and Peabody Baynes. They fed those children all winter and kept them in clothes so that they could go to school. The strange thing about it is this: it was Dave Ramsey who really started that story. He got up in church the other night and confessed his crime. His conscience wouldn't let him keep it. He said that he had not seen Peabody Baynes on that road the day the money was lost but had only heard that he was there. He knew now that he couldn't have been there. Gosh t'almighty! as your uncle used to say when there was nothing else to be said."

It touched me to the soul—this long-delayed vindication of my beloved Uncle Peabody.

The Senator ate supper with us and sent his hired man out for his horse and buggy. When he had put on his overcoat and was about to go he turned to my uncle and said:

"Peabody Baynes, if I have had any success in the world it is because I have had the exalted honor and consciousness that I represented men like you."

He left us and we sat down by the glowing candles. Soon I told them what Ramsey had done. There was a moment of silence. Uncle Peabody rose and went to the water-pail for a drink.

"Bart, I believe I'll plant corn on that ten-acre lot next spring—darned if I don't," he said as he returned to his chair.

None of us ever spoke of the matter again to my knowledge.

My mental assets would give me a poor rating I presume in the commerce of modern scholarship when I went to Washington that autumn with Senator and Mrs. Wright. Still it was no smattering that I had, but rather a few broad areas of knowledge which were firmly in my possession. I had acquired, quite by myself since leaving the academy, a fairly serviceable reading knowledge of French; I had finished the Aeneid; I had read the tragedies of Shakespeare and could repeat from them many striking passages; I had read the histories of Abbott and the works of Washington Irving and certain of the essays of Carlyle and Macaulay. My best asset was not mental but spiritual, if I may be allowed to say it, in all modesty, for, therein I claim no special advantage, saving, possibly, an unusual strength of character in my aunt and uncle. Those days the candles were lighting the best trails of knowledge all over the land. Never has the general spirit of this republic been so high and admirable as then and a little later. It was to speak, presently, in the immortal voices of Whittier, Emerson, Whitman, Greeley and Lincoln. The dim glow of the candles had entered their souls and out of them came a light that filled the land and was seen of all men. What became of this mighty spirit of democracy? My friend, it broke down and came near its death in a long demoralizing war which gave to our young men a thoro four-year course in the ancient school of infamy.

The railroads on which we traveled from Utica, the great cities thru which we passed, were a wonder and an inspiration to me. I was awed by the grandeur of Washington itself. I took lodgings with the Senator and his wife.

"Now, Bart," said he, when we had arrived, "I'm going to turn you loose here for a little while before I put harness on you. Go about for a week or so and get the lay of the land and the feel of it. Mrs. Wright will be your guide until the general situation has worked its way into your consciousness."

IT SEEMED to me there was not room enough in my consciousness for the great public buildings and the pictures and the statues and the vast machinery of the government. Beauty and magnitude have a wonderful effect when they spring fresh upon the vision of a youth out of the back country. I sang of the look of them in my letters and soon I began to think about them and imperfectly to understand them. They had their epic, lyric and dramatic stages in my consciousness.

One afternoon we went to hear Senator Wright speak. He was to answer Calhoun on a detail of the banking laws. The floor and galleries were filled. With what emotion I saw him rise and begin his argument as all ears bent to hear him! He aimed not at popular sentiments in highly finished rhetoric, as did Webster, to be quoted in the school books and repeated on every platform. But no words of mine—and I have used many in the effort—are able to convey a notion of the masterful ease and charm of his manner on the floor of the Senate or of the singular modesty, courtesy, aptness and simplicity of his words as they fell from his lips. There were the thunderous Webster, the grandeur of whose sentences no American has equalled; the agile-minded Clay, whose voice was like a silver clarion; the far-seeing, fiery Calhoun, of "the swift sword"—most formidable in debate—but I was soon to learn that neither nor all of these men—gifted of heaven so highly—could cope with the suave, incisive, conversational sentences of Wright, going straight to the heart of the subject and laying it bare to his hearers. That was what people were saying as we left the Senate chamber, late in the evening; that, indeed, was what they were always saying after they had heard him answer an adversary.

HE HAD a priceless and unusual talent for avoiding school-reader English and the arts of declamation and for preparing a difficult subject to enter the average brain. The underlying secret of his power was soon apparent to me. He stood always for the great thing in America which, since then, Whitman has called "the divine aggregate," and seeing clearly how every measure would be likely to affect its welfare, he followed the compass. It had led him to a height of power above all others and was to lead him unto the loneliest summit of accomplishment in American history.

Not much in my term of service there is important to this task of mine. I did my work well, if I may believe the Senator, and grew familiar with the gentle and ungentle arts of the politician.

One great fact grew in magnitude and sullen portent as the months passed: the gigantic slave-holding interests of the South viewed with growing alarm the spread of abolition sentiment. Subtly, quietly and naturally they were feeling for the means to defend and increase their power. Straws were coming to the surface in that session which betrayed this deep undercurrent of purpose. We felt it and the Senator was worried I knew, but held his peace. He knew how to keep his opinions until the hour had struck that summoned them to service. The Senator never played with his lance. By and by Spencer openly sounded the note of conflict.

The most welcome year of my life dawned on the first of January, 1844. I remember that I arose before daylight that morning and dressed and went out on the street to welcome it.

I had less than six months to wait for that day appointed by Sally. I had no doubt that she would be true to me. I had had my days of fear and depression, but always my sublime faith in her came back in good time.

Oh, yes, indeed, Washington was a fair of beauty and gallantry those days. I saw it all. I have spent many years in the capital and I tell you the girls of that time had manners and knew how to wear their clothes, but again the magic of old memories kept my lady on her throne. There was one of them—just one of those others who, I sometimes thought, was almost as graceful and charming and noble-hearted as Sally, and she liked me I know, but the ideal of my youth glowed in the light of the early morning, so to speak, and was brighter than all others. Above all, I had given my word to Sally and—well, you know, the old-time Yankee of good stock was fairly steadfast, whatever else may be said of him—often a little too steadfast, as were Ben Grimshaw and Squire Fullerton.

The Senator and I went calling that New Year's day. We saw all the great people and some of them were more cheerful than they had a right to be. It was a weakness of the time. I shall not go into details for fear of wandering too far from my main road. Let me step aside a moment to say, however, that there were two clouds in the sky of the Washington society of those days. One was strong drink and the other was the crude, tough-coated, aggressive democrat from the frontiers of the West. These latter were often seen in the holiday regalia of farm or village at fashionable functions. Some of them changed slowly and, by and by, reached the stage of white linen and diamond breast-pins and waistcoats of figured silk. It must be said, however, that their motives were always above their taste.

The winter wore away slowly in hard work. Mr. Van Buren came down to see the Senator one day from his country seat on the Hudson. The Ex-president had been solicited to accept the nomination again. I know that Senator Wright strongly favored the plan but feared that the South would defeat him in convention, it being well known that Van Buren was opposed to the annexation of Texas—a pet project of the slave-holders. However, he advised his friend to make a fight for the nomination and this the latter resolved to do. Thenceforward until middle May I gave my time largely to the inditing of letters for the Senator in Van Buren's behalf.

(To be continued next week)

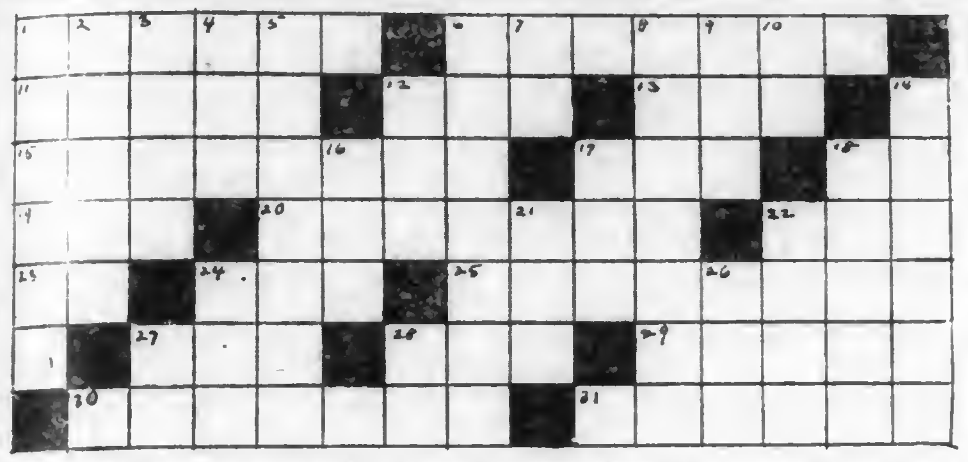
Our Weekly Cross Word Puzzle



TO SOLVE this puzzle, fill the white squares with letters forming the words defined in the list below. For example: 15 (across) is TOLERATE and 22 (down) is THEA. You may begin anywhere in the puzzle. Follow the definitions carefully, and, by noting letters common to two words, you will soon have a clew to help you. The solution of this puzzle will appear in an early issue.

READING DOWN

1. A suit instituted by one party against another in a court of law
2. An earthenware pot or vessel
3. A story
4. Contraction of "I have"
5. Green, fresh, as of foliage
6. Of more size or importance
7. Lower case, abbreviation
8. Of greatest esteem
9. The dative case, abbreviation
10. [illegible] River, abbreviation
12. Consumed
14. What beats in your bosom, plural
16. One on each side of your body
17. Personal pronoun
18. A wicker fishing basket
21. Middle High German, abbreviation
22. The tea-plant
23. The person solving this puzzle
24. A personal pronoun
27. Weight, abbreviation
28. Least

READING ACROSS

1. The opposite of passive
6. To make happy
11. To long for
12. Part of a circle
15. To permit
13. One on each side of your head
17. A head covering
18. Engineering degree, abbreviation
19. Frozen water
20. One who sees visions
22. A syllable often sung when words of song are forgotten
23. Letters meaning "all right"
24. A variety of sweet potato
25. One who threshes
27. Achieved victory
28. To beseech
29. A bed covering
30. To stammer
31. Commits theft

LAST WEEK'S PUZZLE ANSWER

Did you ever hear this one?—

Two women seated side by side in a railroad car had been arguing hotly whether or not the window should be opened. Along came the conductor.

"Please open this window," said one. "I shall die of suffocation if it's not opened!"

"If you dare open that window," cried the other, "I'll catch my death of cold!"

The conductor was shifting in perplexity from one foot to the other when a wise individual across the aisle came to his assistance. "Open it up, conductor," he said. "That will kill one of them. Then shut it down again. That will kill the other. Then we shall have peace!"

"I'm going to call my baby Charles," said the author; after Charles Lamb, you know. He is such a dear little lamb."

"Oh, I'd call him William Dean," said the friend. "He Howells so much."—Wisconsin Octopus.

"Mother, is it true that an apple a day keeps the doctor away?"

"Yes, Jimmie. Why?"

"'Cause if it is, I kept about ten doctors away this morning—but I'm afraid one'll have to come soon."—Bolton Evening News.

The Randolph Enterprise is entering the short story field. This is taken from a recent edition of the paper:

It was exactly midnight.
He stood under the window, waiting.
She threw her trunk out first.
Then she waited.
And waited.
And waited.—Kansas Industrialist.

LIVESTOCK

Cattle—Receipts, 940 head; steady; steers, $6.50@10.15; state bulls, $3@5.85; cows, $2@5.75.

Calves—Receipts, 530 head; steady; veals, common to prime, $8@12; culls and little calves, $4@6.75; buttermilk calves, $4@5.50; fed calves, $6@6.50.

Sheep and Lambs—Receipts, 2430 head; irregular; sheep, $3@7.50; culls, $2.50@3.50; lambs, medium to prime, $12@15.75; clipped, $8@9; culls, $8@9; Va, spring lambs, 16¾c lb.

Hogs—Receipts, 580 head; steady; light to medium weights, $12.50@13.10; pigs, $12@12.45; heavy hogs, $12.60@13.40; roughs, $10.75@11.

HAY AND GRAIN

Feed—Quotations were as follows: City bran, $36; middling, $38.50, in 100-lb sacks; red dog, $50, nominal, in 100-lb sacks; western spring bran, prompt shipment, $36, standard middling, $38.50; flour middlings, $43@43.50; red dog, spot, $50@51, all in 100-lb sacks, all-rail and lake-and-rail shipments; rye, middling, $36; white hominy feed, $44.25, all in 100-lb sacks; cottonseed meal, 36 per cent protein, $44.50; linseed oil meal, $48.80, in 100-lb sacks.

Hay and Straw—Hay, large bales, timothy and light mixed, No 1, $24@25; No 2, $22@24; No 3, $19@21; sample, $10@18. Straw, large bales, rye, $17@18.

Grain—WHEAT, No 2 red, c i f, dom, $2.09¾; No 1 dark spring, c i f, dom, $1.87¼; No 2 hard winter, f o b, export, $1.84⅝; No 1 North Manitoba, in bond, f o b, export, $1.99⅞; No 2 mixed durum, f o b, export, $1.74⅜. CORN, No 2 yellow, $1.35¼; No 3 yellow, $1.32¼; No 2 mixed, $1.34¾. OATS, No 2 white, 55½c; No 3 white, 53½c; No 4 white, 52½c; ordinary white, clipped, 58½@60½c; fancy white, clipped, 62½@63½c. RYE, c i f, export, $1.24¾. BARLEY, malting, c i f, dom, $1.06¾@1.09¾.

CHICAGO LIVESTOCK MARKET

Cattle—Receipts, 500 head. Compared with week ago: Better grades fed steers, 10@15c higher; others weak to 25c lower; extreme top long yearlings, $11.50; medium weight, $11.40; heavies, $11. Week's bulk prices follow: Fed steers, $9@10.85; fat cows, $5.50@7.50; heifers, $7.60@9.50; canners and cutters, $3.25@4.40; veal calves, $9@10.25; stockers and feeders, $6@7.25.

Hogs—Receipts, 5000 head; 5@15c lower; top, $12.80; bulk, good and choice, 140@200-lb avge, $12.50@12.75; desirable, 225@325-lb butchers, largely, $12.30@12.60; bulk packing sows, $11@11.35; strong-weight slaughter pigs, $12@12.50.

Sheep—Receipts, 1000 head. Compared with week ago: Fat lambs weak to 25c lower; other classes steady. Bulk prices: Fat lambs, $12@12.80; Calif, springers, $15.25@15.85; native springers, $14.50@15.50; fat ewes, $7@8.25.

BALTIMORE PRODUCE

Butter—Creamery, fancy, 43@44c; do, choice, 41@42c; do, good, 39@40c; do, prints, 44@46c; do, blocks, 43@45c; do, ladles, 29@30c; Maryland and Penna, rolls, 26@28c.

Eggs—Nearby fresh-gathered firsts, 29½c.

Live Poultry—Chickens, old hens, 4½ lbs and over, 26c; do, medium, 3½@4 lbs, smooth, 24@26c; do, smaller to rough and poor, 22@23c; Leghorns, 22@23c; old roosters, 15@16c; springers, mixed, colored, 1¾ and over, 45@50c; do, smaller, 35@38c. Ducks, old Pekins, 4 lbs and over, 20@22c; do, puddles, 18@20c; do, Muscovy and mongrels, 18@20c; do, smaller and poor, 15@16c. Pigeons, per pair, 20@30c. Guinea fowl, old, as to size, each, 50@75c.

WOOL MARKET

Boston, May 23, 1925.

Domestic—Ohio and Penna fleeces—Delaine, unwashed, 47@49c; ½-blood combing, 47@48c; ⅜-blood combing, 45@46c; fine unwashed, 40@41c. Michigan and New York fleeces—Delaine, unwashed, 45@46c; ½-blood combing, 46@47c; ⅜-blood combing, 45c; ¼-blood combing, 42@43c; fine unwashed, 39c. Wisconsin, Missouri and average New England, ½ blood, 45@46c; ⅜-blood, 43@44c; ¼-blood, 40@41c.

FEED PRICES

The prices below are for prompt shipments based on payment on arrival of cars as quoted by the Philadelphia jobbing trade to retail feed dealers on Monday, May 25. Quotations cover solid carlots for delivery at Philadelphia or Scranton rate points.

Pure spring bran	$36.75@37.25
Spring bran	36.00@36.75
Soft winter wheat bran......	37.75@39.00
Hard winter wheat bran.....	36.25@38.25
Standard middlings	37.25@38.50
Soft winter wheat middlings..	42.00@44.50
Flour middlings	42.00@43.00
Red dog flour	49.50@50.00
White hominy	46.00
Yellow hominy	46.00
36 per cent cottonseed meal...	44.75@45.50
41 per cent cottonseed meal...	47.75
43 per cent cottonseed meal...	49.50@49.75
34 per cent linseed meal......	49.20@50.75

For Baltimore, Cumberland and Williamsport rate points, subtract 20c per ton (for cottonseed meal 40c per ton); for New York, Newark rate points, add 40c per ton (for cottonseed meal 60c per ton); for Woodbury, Bridgeton rate points, add $1.00 per ton; for Freehold, Toms River, Cape May Rate points, add $1.40 per ton.

Market firm; supplies continue light; demand quiet.

GRASS SEED—WHOLESALE PRICES

Toledo, Ohio, May 23, 1925.

Cloverseed, cash, $15; October, $13.90; December, $13.80. Alsike, August, $12.50. Timothyseed, cash, $3.15; September, $3.60 bid.

The Butter Market

THE seasonal increase in receipts which had been long expected and had already been noticeable in some degree was clearly evident during the week ending May 23. Receipts were heavier at all markets than during the week preceding, the increase amounting to some 17,600 tubs. As a result prices showed sharp declines and while the week closed with market conditions somewhat steadier prices had declined, amounts ranging from 1c at Chicago to 3c at New York.

New York Market Weak

The latter market was probably the weakest of all which may have resulted from the fact that the largest increase in receipts occurred at that market on account of the relatively higher level which had prevailed there previous to price declines.

While dealers continued to be free sellers at the lower prices except on high priced goods which were sent to storage, buyers were not taking heavily and street stocks showed sizeable increases at all markets.

Market Summary

STRAWBERRIES met a fairly active demand on the Philadelphia market Friday and the market held firm for good stock. Eastern Shore, Maryland, and Virginia and Delaware berries sold mostly at $6.00 to $6.50 per 32-quart crate. There was some strictly fancy New Jersey stock that sold as high as $8.00. Approximately 4800 crates arrived from these sections by motor truck, in addition to these there were five cars of Virginia strawberries which arrived by rail. The other eastern markets, with the exception of Boston, showed a weaker tendency.

New Jersey and Pennsylvania asparagus was more plentiful on the Philadelphia market. White grass predominated in the receipts and green stock brought top quotations. The market generally held steady. Spinach and radishes were weak. Heavy receipts of Norfolk and North Carolina peas were the feature of the carlot market. Prices were decidedly lower and the demand moderate. Cabbage was also heavy and prices declined. New potatoes were light in supply, the demand fair and the market slightly stronger.—W. R. W.

Adams County, Pa.—The weather for the past three weeks has been unseasonably cold with several frosts and considerable damage to the fruit. All the apples have set well except the York Imperial which is hard to estimate at this time. Seventy-five to eighty per cent of the commercial apple crop here is York Imperial. Much of the corn planted, but too cool for it to germinate and grow. Clover has not made the growth it should have and will not yield as heavy as expected. Wheat and oats doing well. Spring chicks doing very well. Prices: wheat, $1.78; corn, $1.50; oats, 60c; milk, four per cent, $2.30; butter, 40c; eggs, 27c.—A. R., May 19.

Broome County, N. Y.—Work here is well along. A great many oats have been sowed and they are looking fine. Meadows, too, look good. The weather has been too cold for early garden stuff, except for the hardiest. Peas grow slowly and potatoes planted three weeks ago have not come thru the ground. We have had many light frosts and some quite hard ones. Fewer chickens raised this year. Many farmers are making butter and it is hard to sell in the small towns. If farmers would all make good butter it would find a better market. Buyers are afraid they will get poor butter and so buy little at a time and prefer the creamery product. Butter brings 45c and eggs 27c at the stores. Young pigs are very scarce and bring $8.—E. M. C., May 20.

Cameron County, Pa.—Nearly all corn planted but not much chance of it growing unless it warms up. We had a big freeze on both the 12th and the 19th of this month. Not many potatoes planted yet. Fruit of all kinds is going to be scarce this year. Potatoes selling at 75@90c bu.; butter, 50c; eggs, 35c.—Q. E. T., May 20.

Fayette County, Pa.—Just about all the farmers in the county have their corn planted Work was held up for a week or two on account of very cool and wet weather. All of the meadows are getting a good start and it looks as tho there was a good show for hay. Oats crop looking better now since it has warmed up. Prices of various products are running about the same. Work for the men in this county is very scarce and some are having a difficult time making ends meet. Apple trees are not hurt this year but we shall not have any peaches. Cherries also plentiful. Some of the wheat this spring is looking poor so it will not be much of a crop this year.—E. H. V., May 18.

Jefferson County, Pa.—May has been quite wet and cold with frosty nights. Forest trees not in full leaf yet. Apple and pear trees in full bloom with the exception of Baldwin apple trees. The far-below-zero weather last winter killed most of the peach trees, what few are left are having a real struggle to leaf out. Wheat and clover are looking well and growing. Oats are looking green and nice. Many corn fields planted. The heavy thunder showers Saturday afternoon caused a halt. A few nice days now will see most of the corn planted. Some potatoes planted. A few farmers are planting certified seed. Quite a few farmers continue to plow in their potatoes. Potato clubs, Berkshire pig clubs, Guernsey calf clubs, and Keystone ton litter enrollments seem to be all the rage just now. Prices: Butterfat, 42c; butter, 40@50c; eggs, 25@50c; potatoes, 80c; veal calves, $15; hay, $20; corn, $1.40.—F. M., May 18.

Lebanon County, Pa.—The potatoes are all planted and most farmers have finished planting corn. We like to plant corn in our county when the late apple trees are in full bloom. In spite of all that has been said and done about this year's seed corn much corn has gone into the ground untested. This means many fields with poor stands and stalks of low vitality later on. Dealers say that with less than half a crop of corn mature enough too be marketed, we can look forward to $2.00 corn by July and August. Our county agent believes that Lancaster County Sure Crop was the only variety of corn worth while planting this spring. He tested very much corn for farmers and was also very busy supervising and attending orchard spraying. All varieties of grass in wheat stubble look very good. Timothy and clover in wheat fields, broadcasted not too late, is also starting nicely. Higher prices for wheat and corn have been the means for some of our neighbors to have their land farmed. These otherwise vacant places are now being taken care of by neighbors who farm them along with their own on the half share plan. This enriches the farmers who do the work because they have more grain to feed.—R. I. W., May 18.

Mercer County, Pa.—An early spring and so much dry weather has enabled farmers to get considerable work done, but lack of warm rains and so much cold winds and frosty nights have not been favorable to germination of seeds and growth of vegetation. Plowing is practically all done and much of the corn planted but the soil is cold and from now on the weather must make good or crops will suffer. Oats, excepting an occasional field, are not a good stand or color and do not have a thrifty appearance. Timothy meadows and pasture fields are not what they should be. Clover looks very thick but short. Wheat fairly good but not up to standard. About the usual acreage of corn and potatoes being planted. Not much fruit grown in this section and very little spraying done. Apple, pear, plum and cherries are full of bloom and very little damage has been done them by frosts. Farm labor very scarce. Pigs very scarce and prices high, fresh cows selling very high at public sales. Prices of farm produce about the same as last report.—J. W. B., May 16.

Mifflin County, Pa.—Weather is still cool at night, no real warm weather so far yet except a few days the last week in April. Corn ground nearly all plowed, a good bit of corn planted and much to plant yet on account of the cool and wet weather. A large acreage of corn is being planted and much fertilizer is used. A good many potatoes are being planted, too. Some work being done on the public roads by way of scraping and hauling on crushed limestone. A work that is very much needed. Some grass and wheat fields are looking well and others short and thin. Market quotations: wheat, $1.70; corn, $1.20; oats, 60c; potatoes, 75c; butter, 50c; eggs, 24c; lard, 20c; seed corn, $3@3.50; seed potatoes, $2.40 bu.—J. H. B., May 18.

Perry County, Pa.—The weather conditions so far as moisture is concerned have been fine but the temperature has been a little cool for the best germination of the corn which has been planted. There were some heavy frosts in the latter part of April and the beginning of May that did much damage to fruit and some early vegetables and were even a little hard on the young clover. However, most of the clover fields are looking fine for this time of year and wheat and oats are also looking well. State road building is progressing in several sections of the county. Two or three sections are cement road and the other macadamized. More herds signed up under the federal plan and some tuberculosis testing has been done lately. The cow testing association has reorganized and has begun work for another year. Prices: wheat, $1.53; corn, $1.40; eggs, 26c; milk, $2.67 for four per cent League milk.—J. L. B., May 18.

Snyder County, Pa.—We are having ideal spring weather, frequent showers and sunshine causing crops and all vegetation to look very good. Wheat and clover look promising. Oats all sown and up. Most corn is planted. We have had numerous frosts during the past three weeks but not much damage has been done. We will get some fruit in this section but not a big crop. We expect a good crop of strawberries to start. Lots of work going on the state highways. We have lots of hog sales; bringing good prices. Wheat, $1.70; oats, 50c; rye, $1; corn, $1.25; bran, $2 cwt.; middlings, $2.20 cwt.; buckwheat, $1.90 bu.; butter, 38c; eggs, 26c; lard, 20c.—S.D.D., May 21.

Warren County, N. J.—We have had an abundance of rain the past week and quite warm weather. Wheat and rye are looking very good but the grass does not seem to be doing anything yet. Oats apparently germinated well and doing fine. Sod is about all turned and fifty per cent of the corn planted. The large potato growers of the county have the crop in with about the same acreage as last year. Eggs are hatching about sixty-five per cent and chicks seem to be stronger and growing rapidly. Farm help is scarce and wages high as Warren has a lot of concrete roads under construction. Feed prices are holding firm but wheat has gone to $1.70 and corn $40 ton. Eggs, 31c; dairy butter, 46c. Pigs are scarce and selling at $13 pair, six weeks old.—A. S. P., May 18.

Warren County, Pa.—May has proved a cold backward month, frosts almost every night since May 10. No blossoms on early apples and very thin on the late fruit. Indications for peaches poor but pear and cherry good unless killed by these late frosts. Not many blossoms in orchards, but wild fruit trees in the woods are covered. Many farmers going into the poultry business quite extensively with considerable success. Oats showing up good in spite of cold weather; potatoes and corn are being planted this week. Deer are quite tame, coming out into the meadows to feed. Prices are about the same as usual: potatoes, 45@60c; butter, 48c, eggs, 35c; chickens, 25c; Dutch cheese, 3 lbs. for 25c; tomatoes, 30c lb.; cucumbers, 15c ea.; strawberries, 30c qt.; veal, 15c lb.—H. C. J., May 19.

Lancaster Tobacco Letter

CONDITIONS on the Lancaster market remain about the same. Sales have been few, and in the main at prices which were below those paid early in the buying season. The general run of prices now ranges form 12c to 14c.

Rumors were abroad last week to the effect that some buyers were bidding high for what good crops remained, and that prices as high as 18c per pound had been paid. If this was actually the case, it occurred only in isolated cases and has had no general effect on the market as a whole.

Growers who failed to sell their crops at the prices which they demanded continue to pack their own leaf. Their losses are sure to be heavy, altho a favorable "break" in the market may more than compensate them. There are a larger number of growers packing their own tobacco this year than ever before in the history of tobacco growing in Pennsylvania, but the total amount of leaf handled in this way will constitute a very small percentage of the whole crop.

Busy Week for the Committee

The general committee on the organization of the "Pennsylvania Tobacco Growers, Inc.," was very busy last week, and the actual organization of the proposed pool is beginning to assume more definite shape. The report of the sub-committee on finance, headed by Amos Gilbert, urged that membership dues in the organization be placed at $5, and made a plea for growers to give the movement their strong support. This report was adopted unanimously.

Three additional committees have been named and will start work at once. They are, a committee on warehouse facilities, a campaign committee and a banking committee. Each of these bodies will get to work at once to whip the details for organizations into shape. Leaders in the move for a cooperative marketing association believe that the project will receive seventy-five per cent support from growers which is necessary to make it become operative.—Garden Spot Farmer.

First in Stock Raising

THE United States stands first among the stock-raising countries of the world, but Argentina and Australia, which are sparsely populated, have large surpluses of beef and mutton and are the principal factors in supplying the European deficit in these classes of meat.

The United States habitually exports from twelve to fifteen per cent of its total production of pork.

The United States has approximately one-sixteenth of the world's population, but has within its borders about one-seventh of the food animals.

The total quantity of meat consumed in the United States has increased steadily each year for the la six years, but the ever-increasi population reduced the per capita consumption about one pound in 1924 compared with the previou year. Per capita consumption w 164.9 pounds exclusive of 15. pounds of lard.

Indications point to a somewha shorter supply of meat for the nex year or two at least.—U. S. D. A.

Guernsey Calf Club

CONSIDERABLE interest has been created in Guernsy calf clu work in Jefferson County. Ten purebred calves between the ages of six and eight months have been secure from nearby counties. These calve were selected on type and as far a possible from dams with good production records. Many of these calve are going into grade herds which ar headed with purebred sires and it i hoped that they may be the means o encouraging the purchase of more purebred Guernseys. The members o the calf club will bring their calves to the round-up which will be held in connection with the Brookville Fair next fall.—A. L. B.

Storage Holdings

THE supply of apples has been cleaned up more closely this season than usual. Stocks of both barreled and boxed apples are considerably less than last year. Ther were 504,000 barrels of apples in storage on May 1, compared with 1,044,000 barrels on May 1 a yea ago, and 1,793,000 boxes compared with 2,901,000 boxes in 1924.

Stocks of eggs in cold storage May 1 totaled 4,901,000 cases as compared with 3,563,000 cases on the same date last year, reports the Department of Agriculture. Holdings of creamery butter are placed at 3,744,000 pounds compared with 8,913,000 pounds a year ago.

Poultry stocks are larger than a year ago, being 82,953,000 pounds of frozen poultry as compared with 52,068,000 pounds in 1924. Storage holdings of meats are placed at 997,403,000 pounds compared with 1,063,635,000 pounds last year.—R.

Winning Blue Ribbons

(Continued from page 3)

Producers' Association, Philadelphia; James Foust, Director of the Bureau of Foods and Chemistry, Harrisburg; H. J. Burlovich, Pittsburgh; R. W. Balderston, Secretary of the Philadelphia Interstate Dairy Council, Philadelphia; George Schuckman, Masonic Homes, Elizabethtown; M. T. Phillips, President of the State Council of Agricultural Association of Pennsylvania; G. H. Truckell, Harrisburg, Secretary of the Pennsylvania Federation of Holstein Friesian Clubs; J. S. Campbell, Jr., Butler; W. F. Shrum, Jeannette; President of the Pennsylvania Jersey Breeders' Association; James L. Wood, President of the Dairy Husbandry Club of the Pennsylvania State College; Professors A. L. Beam, W. D. Swope and W. H. Martin, of the Dairy Department.

Many out of town visitors were present and the occasion impressed one with the deep interest of the students in all phases of the great dairy industry. The large number of students specializing in the dairy course at Penn State, however, is simply in keeping with the importance of the industry in Pennsylvania which is the seventh state in the Union in number of cows, fourth in milk production, third in the value of its dairy products, third in the production of condensed and evaporated milk, second in farm cheese and butter, second as a milk consuming state and first in the manufacture of ice cream.

To Reduce Caked Bag

What is the best method of reducing a caked bag? Is the use of such drugs as iodine, spirits of camphor, etc., apt to reduce milk flow? What is the best way to reduce the chances of a caked udder in a fresh cow?—W.E.D.

The best method I know in reducing a caked udder is to bathe it frequently with hot water, once every two hours during the day. After the udder has been bathed with hot water, massage it gently and rub in a little vaseline. The udder should also be milked out frequently. If it is milked after each bathing at periods of two hours, the trouble will be relieved in most cases. A fresh cow that is a high producer is very likely to have a caked udder when she is in high condition of flesh at the time of freshening. However, a cow will produce so much more milk during the year if she is in good flesh when she freshens, that it is advisable to have her fairly fat rather than thin when she freshens. It is commonly supposed that drugs such as iodine and spirits of camphor have a tendency to reduce the milk flow. This, however, may be more fancied than real.—A. A. B.

What Shall I Feed?

What is the proper formula as to digestible nutrients for starting calves, for growing stock, and for dry cows or a bull?—W. E. D., Washington County, Pa.

Calves should be left with their dam from one to three days after birth. They should then be fed whole milk for three weeks, and then gradually worked off onto skimmilk so that they may be receiving skimmilk or skimmilk substitute by the time they are four weeks of age. If the calves get plenty of skimmilk then any common farm grains will usually work very nicely as grain feed. Shelled corn does nicely to go along with skimmilk.

Mixture Used at Penn State

A mixture that has been successfully used at the Pennsylvania State College to go with skimmilk is made up of 100 pounds of corn meal; 100 pounds of ground oats; 100 pounds of wheat bran; 50 pounds of linseed oil meal, and 8 pounds of blood flour. A grain mixture which you use for your milk cows will be satisfactory for your growing stock and for the herd bull.—A. A. B.

Milk for Calves

What is the maximum amount of whole milk and skimmilk to feed calves at various ages to obtain maximum growth? I am reserving whole milk for first two weeks, after which most of my calves must be fed skimmilk. Without lessening the quantity of skimmilk, I have been adding hot water as the only practicable way of heating the milk (skim once a day only). Is this water detrimental? Will it restrict the amount of milk I can feed? What are the effects of feeding cool milk? I want to feed all the milk that is profitable for results. What are the symptoms of too much milk, as to results?—D.

It is undesirable to feed calves too much whole milk or skimmilk at one time, better to feed them in smaller amounts and frequently, rather than in large amounts. A Jersey or Guernsey calf after it is removed from the dam may have from eight to ten pounds of whole milk daily, fed in three feeds daily during the first week or two. After that time, have a similar amount of feed fed in two feeds daily. This may gradually be increased to ten or twelve pounds of milk or skimmilk. An Ayrshire or a Holstein calf may start with ten to twelve pounds of milk and gradually increased to twelve or fourteen pounds by the time the calves are six to eight weeks old. Water had best be permitted the calves as a separate proposition from the skimmilk. Allow them all the clean drinking water they care for in addition to what skimmilk they get.

Even Temperature of Skimmilk

You are feeding more skimmilk than would appear to be necessary for your calves. It is unwise to overfeed either with skimmilk or whole milk as it has a tendency to cause digestive troubles and makes the calves pot-bellied. Probably sixteen to eighteen pounds of skimmilk is as much as would be desirable even for the larger and older calves. This should be divided into two feeds daily. The milk should be fed at about the same temperature every day. For young calves, it is best to warm it to a temperature of about ninety degrees. The older calves may have the milk cool, but it should not be warm one day and cool the next. Regularity is essential.—A. A. B.

League Milk Prices

ACCORDING to an announcement from the general offices of the Association in New York, the Dairymen's League farmers will receive a net pool price of $2.135 per hundred pounds for their milk delivered during the month of April. This is the highest April price in the history of the Association. The April price is .385 higher than April a year ago, and .415 above the average pool price for April since the pool has been in operation. It is .74 above the average butter value of 100 pounds of three per cent milk, according to market quotations of butter during the month.

The Association has announced a reduction in the price of Class 1 or fluid milk from $2.80 to $2.33 per hundred pounds effective May 18. This is the base price for one hundred pounds of three per cent milk delivered in the base zone, 201-10 miles from New York City.

Affected by Price Cutting

The demoralized condition which has developed in the wholesale milk market in New York, League officials say, has been brought on largely by active price competition or price cutting on the part of certain milk interests.

The action of the League in reducing the fluid price to dealers was taken when it became evident such a step was necessary in order to protect the League farmers' market. Following the announcement of reduction in price by the League, distributors in New York City announced a reduction of one cent per quart in the retail price.

First of It's Kind

THE honor of belonging to the first standard 4-H Boys' and Girls' Club in the Keystone State falls to the members of the Venango County Baby Beef Club.

With County Agent E. G. Ifft, P. T. Brown, animal husbandry extension specialist of the Pennsylvania State College, inspected the calves owned by club members and found all growing nicely on a ration of clover hay and silage, supplemented with a grain mixture of corn, oats, bran, linseed oil meal. Much interest is being taken in training the calves to stand, walk, and pose properly. Practically all are now broken to lead. Competition is expected to be keen when the calves are rounded up for showing.—A. L. B.

Breeding Farm Horses

THERE has been a marked falling off in the number of mares that have been bred on the farms in the United States during the past few years. This has been due in a large measure to the decline in values since the World War period. Since this condition is general thruout the United States, it is quite apparent that the total number of horses on farms has decreased and that such decrease is largely made up of colts and young horses.

A recent statement issued by the United States Department of Agriculture calls attention to the situation with which farmers will be confronted within a few years unless more colts are raised. If the number of colts raised during the next five years is not increased over the number produced and raised annually at present, there is likely to be an acute shortage. If horse breeding continues at the present rate, the number of horses on farms in 1930 will be about sixty-five per cent of the total number on farms at present. Such a situation would certainly mean a very acute shortage and high priced horses.

Colts Only Three Per Cent

According to the survey made by the United States Department of Agriculture, the largest age group of horses is now made up of eight and nine-year-old horses, this age representing about twenty per cent of the total number of horses on farms. Colts under one year represent less than three per cent of the total while colts between one and two years old are only 2.3 per cent of the total. All the horses under four years old represent less than 12 per cent of the total horse population, while those between the ages of four and ten years represent 45.6 per cent; and 43 per cent are more than ten years old.

Fortify Against a Shortage

If horse breeding continues on this basis it will mean that it is only a question of a short time when there will be a marked reduction in the number of horses of workable age. When the shortage of horses becomes evident it is natural that it will be more noticeable in sections where horse breeding has not been an important part of livestock production in recent years.

Since the eastern farmer has given little thought and attention to the breeding of horses in recent years, it will be a good plan to investigate the possibility of breeding some of the best brood mares on the farm to a good purebred stallion and develop a few colts each year to fortify against a shortage of horses for farm use.—W. H. Tomhave.

POULTRY

150,000 CHICKS, 1925
ONE MATING ONLY, THE BEST.

	100	500

Veterinary

Conducted by W. C. Fair, V. S.

Advice thru this department is free to our subscribers. Each communication should state history and symptoms of the case in full; also the name and address of writer. Initials only will be published. We cannot make reply by mail. This is one of the most valuable columns of the paper and we invite readers to make use of it. Clippings from this column, when properly preserved and classified, make one of the most valuable medical symposiums a farmer-stockman can obtain.

SORE EYES.—Our very young lambs are troubled with sore eyes, but do not seem to be sick.—A. R., Franklin County, Pa. Dissolve a teaspoonful of boric acid in a half pint of water and apply a few drops to eyes twice a day. A bright light will make them worse.

CHRONIC SCOURS.—Have a yearling heifer that has been troubled for a long time with scours and nothing I have done for her seems to make her any better.—M. H., Lancaster County, Pa. Give her a teaspoonful of powdered dried sulphate of iron at a dose in feed three times a day.

MILK FEVER—COUGH.—One of my cows had severe attack of milk fever; since then she has not been doing well. One quarter of udder is diseased. Several of our calves are troubled with a cough.—H. K., Somerset County, N. J. Give cow a tablespoonful of powdered gentian in ground feed three times a day, feed plenty of roots and salt her daily. Apply camphorated oil to throat of calves twice a day.

GARGET.—We have a cow which is now suffering from second attack of garget and now gives very little milk from one quarter of udder. Will she ever give much milk from diseased quarter?—O. B., Erie County, Pa. Give her half ounce of fluid extract of phytolacca at a dose three times a day, and apply one part iodine and ten parts lard to hard portions daily. I am unable to say how she will milk from this quarter, it's too early to tell.

BLOTCHES.—Have a young cow that has large blotches on her back and near root of tail which ooze a watery fluid.—K. D., Kent County, Md. Dissolve one ounce of acetate of lead, one dram of tannic acid in one quart of water and wet sore parts three times a day. Equal parts of boric acid and oxide of zinc is another good remedy and it should be applied twice daily.

MANGE.—I have a Clyde mare eleven years old. She was troubled with lice last year, rubbed hair out of tail. What shall I apply to make it grow?—E. F. S., Union County, Pa. Occasionally apply one part bichloride of mercury in 1000 parts of water to scalp, then apply some vaseline to bald parts.

RHEUMATISM.—Can you please tell me the cause of my red Durham cow being stiff in all four legs? She has been that way for the past two months. We think it might be caused by standing on cement floor. She has good appetite.—O. H., Chemung County, N. Y. All four feet may be some sore and painful, or she may be rheumatic. Give her a teaspoonful of powdered nitrate of potash in drinking water or in soft feed twice a day for fifteen days.

NAVICULAR DISEASE.—For a long time one of my horses has been lame, caused by navicular disease, that's what our veterinary believes it.—R. W. B., Westmoreland County, Pa. If rest and repeated blisters fail to relieve his lameness, then have a section of the nerve removed on both sides of leg, either about or below fetlock joint, then he will suffer no pain and will cease limping.

ABNORMAL APPETITE.—I have a cow that does not thrive, when allowed to run out. She is inclined to chew bones and old pieces of wood. —R. D., Wyoming County, Pa. Mix equal parts of fenugreek, gentian, ginger, bicarbonate of soda, common salt, together, and give her two tablespoonfuls in ground feed three times a day. Feed her plenty of roots.

Our Readers' Classified Advertising Department

A market place to buy or sell at little expense. Over 90,000 farm families read Pennsylvania Farmer every week. Rate 6 cents a word each for one, two or three consecutive weekly insertions; 5 cents a word each for four or more insertions. Count each number and initial and send cash with order. Orders, discontinuances or changes of copy must reach us by Wednesday of week preceding date of issue. All advertisements set in uniform style, no display type or illustrations. Poultry advertising may run here, but if displayed or illustrations used must run in display advertising columns at commercial advertising rate (55 cents per agate line). Livestock advertising not accepted in this department. Minimum, ten words.

Wood Chucks Must Go!

They destroy growing crops, they fill the fields with dangerous holes, they frequently undermine embankments and weaken levees. There is no room for them on an up-to-date farm.

Woodchucks can be exterminated easily, effectively and economically with

CYANOGAS
(REG. U. S. PAT. OFF.)
CALCIUM CYANIDE

A heaping tablespoonful of Cyanogas (Calcium Cyanide) is placed in the opening to each burrow. The moisture in the air liberates hydrocyanic acid gas which kills the woodchucks. There is no escaping it; they die in their tracks.

Your dealer has Cyanogas (Calcium Cyanide) or can get it for you. Or, we will deliver a 5 lb. tin sufficient to kill all the woodchucks in 80 burrows for $2.50.

Prevention is Positive Insurance

Cholerine For Fowls

Cholerine your flock regularly throughout the year and you will never lose profits through diseased birds.

Cholerine will simply not let poultry diseases of any kind attack your fowls. It does this job in a natural way by ridding the glands and intestines of all poisonous waste matter and by stimulating hens' appetites and assisting digestion.

Cholerine will fill your birds with health and energy and make the hens lay eggs the year 'round. Each egg will be fertile and every fertile egg will hatch a strong, live chick.

Cholerine results are guaranteed or your money is refunded. See your merchant for a free sample today.

Germo Creosote Dip

Manufactured to work right with Cholerine and keep your flock healthy and profitable is our famous Germo Creosote Dip.

While Cholerine builds your birds up to resist all disease germs, it cannot affect lice, mites, or other pests that infect the walls, coops, runs or other poultry equipment. Germo Creosote Dip must be used.

Sprayed liberally around the premises with our sure-fire Germo Sprayer, Germo Creosote Dip kills instantly all germ or bug life it comes in contact with. It is equally effective for disinfecting hog lots, cattle pens or for stock dipping. If your merchant doesn't carry Germo Creosote Dip or Cholerine, write us. We'll supply you.

Kodak Simplicity further Simplified

The 1A Pocket Kodak Series II

BY a simple lever mechanism, the front snaps instantly into picture position—ready for business when the camera is opened.

With the Kodak Anastigmat Lens and Diomatic Shutter equipment, it offers a range of efficiency not heretofore obtainable at the price.

This superior combination of lens and shutter means better timed, sharper negatives, the evidence of which is plain in the prints—overwhelmingly plain in enlargements.

The focus is prompt and precise. A mere turn of the lens, which is at your fingertips, brings the focus instantly, accurately, while beneath the lens a plainly lettered, simple scale tells you how to fit the exposure to the light.

It's all simple, yet there's speed in the *f.7.7* lens, and a shutter with speeds up to one-hundredth part of a second to make that speed available.

And with it all there's ease of loading and beauty of design, and it's really a *pocket* Kodak. It's autographic, of course.

No. 1A Pocket Kodak, Series II, for 2½ x 4¼ pictures, equipped with Kodak Anastigmat *f.7.7* Lens and Diomatic Shutter—$26.

Real Facts about Soil Needs

Laboratory Car Showed How to Cut Crop Costs

THIRTEEN hundred twenty-six samples of soil were tested on the Soils Testing Laboratory Car recently operated over the New York Central Railroad in Pennsylvania by chemists from the Pennsylvania State College and the Pennsylvania State Department of Agriculture cooperating with the Agricultural Bureau of the Pennsylvania State Chamber of Commerce and the Agricultural Relations Department of the New York Central Lines in staging this soil fertility exhibit.

Twenty-six hundred people, ninety per cent of whom were farmers or members of farm families, visited the car and watched the soil chemists perform the work of determining how much lime, phosphorus, organic matter and nitrogen the soil contained.

Every farmer who brought one or more samples of soil to the car took away with him a complete tabulation and history of that particular field and soil. Not only that, he also took home on the form provided, the best possible information as to how much lime his soil needed to neutralize the acidity and how much he could economically afford to apply for the crops he wanted to produce.

Farmers Often Use Wrong Fertilizer

The same thing was carried out with respect to commercial fertilizers. After the soil tests had been completed and the analysis studied by the soils and crops experts from State College it was often discovered that the farmer was using the wrong kind of fertilizer or possibly he was trying to keep his crop yield up by using high priced fertilizers when the application of lime or limestone was all that was needed.

In one case, a farmer was going to order a carload of limestone, enough to put two tons on each acre of a certain field. It had been limed twice in the last five years. After testing the soil from this field it was found that no lime was needed at all on that particular field. The farmer saved $200 by bringing a soil sample to the car.

For the purposes of study of the tests made, all garden soils, those of less than one acre were eliminated. The balance of the farms were then divided into classes according to size; 288 were from farms or truck patches under five acres; 60 were from 5 to 19 acres; 122 from 20 to 49 acres; 287 from 50 to 99 acres; 283 from 100 to 199 acres; 52 from 200 to 300 acres, and 16 farms were over 300 acres in size. The average size farm in the northern, central and northwestern portions of Pennsylvania would, therefore, seem to be about 100 acres.

Four hundred thirty-four fields tested required 2½ tons or over of limestone per acre, 396 fields required from 1 to 2 tons, 145 required from ½ to 1 ton and only 56 fields had no lime requirement. (This does not include the 288 gardens tested.)

In view of the above lime requirements, of the 820 farmers whose 1031 fields were tested, only 361 fields or 35 per cent had been given one or more applications of lime in the last four years. In other words, with an average lime requirement of two tons per acre only 35 per cent of the fields had been given any lime over a four-year period.

The One-acre Demonstrations

Five hundred fifty-two of the 1031 fields, or about 51 per cent, had received commercial fertilizer once or more in the last four years. Five hundred twenty-six fields had received one or more applications of manure in four years. This was about 50 per cent.

One-acre sweet clover demonstration plots were established on from one to five farms at each stop made by the exhibit and cars. These demonstrations will seek to determine the value and place of sweet clover in crop rotations in Pennsylvania as a soil builder and pasture crop. Sweet clover is not considered as a hay crop of much value. The Pennsylvania State Chamber of Commerce gave, free, twenty pounds of the very best sweet clover seed to each farmer who is to grow the acre this year under the direction and supervision of the county agent and the extension crops specialists from State College. Enough bacterial inoculation for each twenty pounds of seed was also furnished free.

A sufficient amount of lime or limestone to completely neutralize the one acre was distributed free to each of the farmers who are conducting the one-acre sweet clover demonstrations. This was given by four large lime and limestone companies.

Considered Big Success

The operation of these soil clinic cars was considered a success from all angles by those who were interested in it. In probably no other way could the farmers receive the benefit of the tests, advice and first hand information as they were able to do in this case.

The towns visited were: Westfield, Ulysses, Knoxville, Lawrenceville, Wellsboro, Cedar Run, Jersey Shore, Lock Haven, Phillipsburg, Cherry Tree, Clearfield, Brookville, Shippenville, Stoneboro, Jamestown, North Girard, North East, Russell, Warren, Titusville, Grand Valley and Youngsville.

Authorities to Discuss Dairying

SEVERAL Pennsylvania authorities on the cooperative marketing of milk will appear on the program of the American Institute of Cooperation to be held at the University of Pennsylvania, Philadelphia, July 20 to August 15, 1925. Among them will be R. W. Balderston, Secretary, Interstate Milk Producers' Association, Philadelphia; C. I. Cohee, Philadelphia Interstate Dairy Council; John D. Miller, Vice-president, Dairymen's League Cooperative Association; Dr. Clyde L. King, Secretary of State, formerly milk price arbitrator for Pennsylvania; and E. R. Quackenbush, Pittsburgh Dairy Council.

Dairy cooperation in Denmark will be discussed by Professor O. H. Larsen, University of Copenhagen. Cooperative associations engaged in the marketing of various dairy products in many different states will have representatives present. John Brandt, president, and A. J. McGuire, manager, Minnesota Cooperative Creameries Association, the largest manufacturers of sweet cream butter in the world, will be present to discuss their methods.

Among others who are scheduled for talks are G. W. Slocum, president, Dairymen's League Cooperative Association; Richard Pattee, manager, New England Milk Producers' Association, Boston; Frank Swoboda, manager, Wisconsin Cheese Producers' Federation; and Carl Haberlack, manager, Tillamook Cooperative Cheese Asociation, Oregon.

The final program will carry the names of many more authorities than are given here. The schedule as it now stands makes dairying one of the leading topics of discussion during the third and fourth weeks of the session.

Banking and Farming Go Together

How the Butler County National Helps Increase Profits for Its Farmer Patrons

By HUGH FERGUS

DID you ever think how much a bank is like a farmer? Like a good farmer, a good bank will make money for its stockholder owners; on the other hand some banks are medium and poor when it comes to making money.

The Butler County National Bank located in Butler, Pa., is one of the very best among banks. Like our best farmers whose system calls for returning as much of the products of the soil to the soil thru livestock or plowing down cover crops, liming, fertilizing, etc., so this bank believes in keeping up the financial fertility of its farmer patrons by returning a portion of its profits to them.

Bank Decides to Help Farmers

With a business among the farmers of Butler County larger than that of any other bank in the county, the directors of this institution decided a little over two years ago to spend some of their income helping their patrons to increase the profits from their farms. To accomplish this they hired R. C. Wiggins, who was then county agent of Butler County, to devote his entire time to farm extension work.

One of the purebred sires owned by the Butler County National Bank

The directors of the bank knew of the splendid work Mr. Wiggins had done in the county, but they also knew that in reaching the whole county he could touch only the high spots among the bank's farm patrons. In hiring him they meant that in no way was he to work in opposition to the work of the county agent. Thus far the cooperation between Mr. Wiggins and Mr. Mandeville, the present county agent, has been splendid. The two of them work together on some projects, often accomplishing more thru their combined efforts than if they had worked independently.

The following are some of the successful projects Mr. Wiggins has worked on, practically all of the work being done in cooperation with the county agent:

Together they have put the growing of potatoes in the county on a scientific basis. Today no real potato grower in the county would think of growing potatoes that were not from selected seed or selected from certified seed planted the year before. Now fifteen carloads of certified seed are brought into the county each year. Many of the growers avail themselves of the help of the bank in financing the crop from seed time to marketing time. In addition to working with the "Dads," in 1924 the bank sent the three boys of the potato club, who grew over 400 bushels per acre, to the Ohio State Fair.

Active in Various Projects

Three years ago the bank paid five dollars per boy to 159 boys who made the trip to State College when ground was broken for the potato growers' hospital.

In poultry club work they gave a prize of twenty baby chicks to one and fifteen to the other of the two who led in the work of the club.

Each year the bank is the heaviest contributor to the county farm products show. Naturally, Mr. Wiggins spends a lot of his time working on this show.

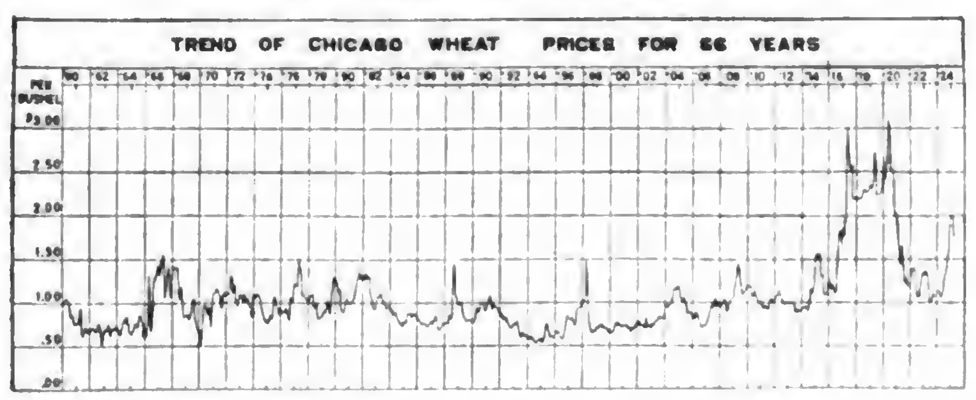
Pig club work is always among his activities. Perhaps the most and the best work done has been with purebred dairy cattle. In 1924, and thus far in 1925, Mr. Wiggins has assisted in bringing in ten carloads of purebred dairy females. The purchase of about one-third of these has been financed by the bank on notes with plenty of time to pay.

To improve the cows already on the farms in the bank's territory, and to keep up the standard of those purchased, the bank bought (to page 23)

Prospects for the 1925 Wheat Crop

A Brief Review of World Conditions Which May Affect This Year's Prices

By GILBERT GUSLER



IN TRYING to draw a picture of the wheat situation and of wheat market prospects as they appear at present, there are two main features to be put on the canvas. First, is the size of the old crop reserves in this and other countries; second, is the prospective yield of the new world crop. This second point, in turn, may be split up into two parts. On the one hand is the probable size of crops in importing countries together with the amounts which they must import during the year. On the other hand are the yields and probable surpluses in exporting countries.

It is this world balance sheet of demand and supply, import needs representing the demand and surpluses in exporting countries representing the supply, which is usually given credit for determining the world price level.

Altogether, it appears that the quantity of old wheat available for export or for carryover in exporting countries in midsummer this year will be about 115 million bushels, unless the last crop yields were underestimated. This is approximately 100 million bushels less than last year. The inferences to be drawn are that the market is entitled to hold exceptionally strong until new wheat is available in volume, that producers in the southwest who wish to sell at harvest time will encounter a brisk demand for their product, and that indications of poor yields in 1925, especially in exporting countries, will have a decidedly stimulating effect on prices.

New crop prospects the world over are not as well defined as the probable old crop carryovers. More is known of the crop in the United States than in any other country. Unofficial reports from reliable sources indicate that winter wheat abandonment was nearly twenty-one per cent of the acreage planted, or next to the highest on record. Of course, nature has vast healing powers. The prospective yield can be greatly increased by favorable weather. Last year, the June 1 forecast was only 693 million bushels, but the harvest was 180 million bushels more. On the other hand, it is equally possible for the crop to go to the bad.

European crop conditions indicate larger yields than in 1924, but the acreage for the countries reported to date is practically the same and an average yield per acre would make the crop less than one per cent larger than in 1924.

It is premature to talk of probable import needs in the new crop year, but the reports on European prospects would not indicate much reduction in the amount needed. Prospective surpluses to supply import needs look much smaller than last year. To begin with, there is a shortage of about 100 million bushels in the carryover. Then, the present indications are for a crop in the United States 180 million bushels less than last year, while India has 42 million bushels less. It will take either vast improvement in the United States or yields far above normal in one or more of the other exporting countries in order to make up a budget of import needs equal to the average.

In brief, the wheat situation, so far as the evidence enables one to judge at the present time, is much more bullish than at any time in the last year. If values last summer and fall were on a sound basis, the price should be still higher this year unless there is great improvement in new crop prospects. Russia is the great unknown, as there is no telling when she will come back as a great exporter of wheat and rye.

OUR JOB is to serve our readers. Whenever you are puzzled write to us and we will help you if we can.

The men who are lifting the world upward and onward are those who encourage more than criticise. — Elizabeth Harrison

Needless Waste

THE Post Office Department is making an endeavor to educate the public to be more careful in directing its mail so that the confusion, delay and loss occasioned by carelessness may be reduced. The Department presents facts and figures which should cause every mail user to stop and look before he drops his letter or package into the mail box. Here are some of the questions Uncle Sam asks you:

Do you know that—

21,000,000 letters went to the Dead Letter Office last year?

803,000 parcels also went there?

100,000 letters go into the mail yearly in perfectly blank envelopes?

$55,000 in cash is removed from misdirected envelopes?

$12,000 in postage stamps is found in similar fashion?

$3,000,000 in checks, drafts and money orders never reach intended owners?

Uncle Sam collects $92,000 a year in postage for the return of mail sent to the Dead Letter Office?

It costs Uncle Sam $1,740,000 annually to look up addresses on misdirected mail?

The greater part of this loss and delay would be avoided if every letter and package had the sender's name and post office on the outside. The cost of having your card printed on the upper left hand corner of the envelope is small and there is little excuse for not having neatly printed stationery. For social correspondence it is perfectly good form to have the name and address written or printed on the loose flap on the back of the envelope.

The U. S. and the World Court

WE WONDER whether the very definite stand taken by the United States Chamber of Commerce in favor of the World Court will have any effect towards cracking the shell of some of our hard-boiled isolationists. The United States Chamber of Commerce is composed of a type of business men who cannot by any stretch of the imagination be thought of as sentimentalists or political radicals. The Chamber has published a pamphlet containing a strong argument in favor of the cooperation of the country in such a court, one paragraph from which follows:

"The Court is here. The necessary reconciliation of divergent views regarding the rules of conduct of nations may in the future achieve support of the civilized world; that must proceed slowly step by step. Meanwhile, the court can be a highly useful agency, and those nations as well as individuals who desire to do so and believe in the process may continue to press for the acceptance of a universal law that will declare wars of aggression to be criminal violations of the laws of nations, and may foster the visitation upon aggressors of such opprobrium, condemnation or punishment as will prevent the ready recourse to the use of force rather than to the peaceful determination of questions of right and wrong by judicial process."

Imported Pests

MOST of the pests which plague American farmers and fruit growers have been brought into the country with importations of foreign stock. So well established is this fact that the rules governing importations have been tightened more and more by the Department of Agriculture. Of course, all such restrictions interfere seriously with the business of importing nurserymen and strong protests have been made. Charges have been made that the Department is unnecessarily stringent in making its rulings and unwarranted criticism has been directed towards the Department officials.

But when it is remembered that the devastating chestnut blight was introduced into this country on some imported chestnut trees for a park in NewYork City it will be realized that the importers might well have been refused permission to bring in the infected trees. Hundreds of millions of dollars worth of valuable timber, to say nothing of the esthetic value of the chestnut tree, has been destroyed in this land because men were too impatient to grow trees from seed.

Japanese flowering cherries are indeed beautiful, but it would have paid to introduce them in a slower way than by importation of trees, and thus have avoided the destructive Oriental fruit moth.

When we add to these pests the Japanese beetle, the European corn borer, the alfalfa weevil, and a host of other foreign-born pests, the thoughtful farmer will uphold the hands of the Department officials rather than join in the protests of those who wish a free hand in bringing into the country importations which may add to the troubles of American farmers.

The Farm Census

JUST what the complete census for the United States will show in comparison with the census taken in 1920 remains to be seen, but if the state of Delaware, for which a summary has just been issued, proves typical of all the states many writers on agricultural topics will have to revise their figures. The press summary of the last census compared with the figures from the 1920 census shows the following in relation to Delaware:

	1925	1920
Value land & buildings	$60,118,666	$64,755,631
All land in farms, acres	899,641	944,511
Number of horses	22,399	27,752
Number of swine	24,106	38,621
Number of dairy cows.	33,837	33,026
Number of peach trees.	557,850	501,111

Of course, the figures representing farm conditions for the year 1919 and used in the 1920 census were those of the period immediately after the close of the war and show farm operations still in their war-time expansion. The maintenance of production upon a war-time basis was the chief cause of the disastrous slump in 1920, so that the lesser figures secured in the 1924 census should be a cause for thankfulness rather than otherwise.

Electrification Coming Fast

WHY do farmers spend money for high priced automobiles to take them away from home when, for a smaller outlay of cash, they could install electricity to make life at home more attractive? Is it the urge to travel that has led the public in general to adopt modern transportation facilities faster than modern home conveniences? Owen D. Young, in a recent public address, advanced one reason for the prevailing condition. He said:

"Both the automobile and radio are later developments than electric light and power. They have had wide sale among farmers. It is probably explained by the fact that these may be individually bought, whereas electric service requires cooperative group action. The farmer is too much of an individualist to be a good cooperator. He must learn to cooperate if he is to get electric service."

Mr. Young's reason sounds good, but we don't believe it is the right one. The automobile and radio opened up new worlds to those whose lives had been circumscribed by the boundaries of the nearby community. It wasn't greater ability to cooperate, but rather a better knowledge of the advantages enjoyed by the other fellow, that was needed to speed up the work of rural electrification. Now that knowledge has been secured, and unless all signs fail, the application of electric power on the farm will advance as rapidly as has the use of the gas engine in transportation.

Referred without Comment

UNDER this heading we publish an editorial on some current topic taken from the columns of a contemporary paper. Its publication does not necessarily mean that the sentiments expressed are the sentiments of Pennsylvania Farmer.—Editors.

THE FARMER'S PART

Some of the industrial magnates and a few leaders in agricultural thought seem to think that the farmer is doing too much talking and too little work to best alleviate some unfavorable conditions the farming industry is in.

One prominent thinker brings up the condition of the pioneer farmer and explains that conditions today are much better than in the early days. He contends that the farmer now has living conditions so much better and at less effort than a generation ago. The pioneer worked from sun to sun, and if the farmer of today would do the same there would be no complaint about expenses, taxes, etc.

But why bring up the condition of the pioneer farmer, unless you also bring up the condition of the laboring man and the merchant and professional man of that time, for the whole question of dissatisfaction comes from comparative conditions? The farmer is discontented because he can see that he is not getting benefits from his labor equal to that from other callings.

Is it the duty of the farmer to work from sun to sun to produce cheap food and raw material which will make it possible for the laboring man to have an eight-hour day or the captain of industry to pile up his millions? The farmer is willing to do his share, always has been, but is dissatisfied now because he thinks he is doing more.

If the farmer keeps busy from sun to sun and says nothing, he can always do so. It's his fight for equality. No one else will do it for him. Education is doing much for the farmer. It shows him whatever inequality there may be, and gives him power to combat it.—Michigan Farmer, May 23, 1925.

Washington Letter

PLAN TO SPEND PURNELL FUNDS.—At a recent meeting in Kansas City of Agricultural Department officials with experiment station men and college presidents to consider the ways of spending the increased appropriations for experiment stations provided under the Purnell Act, six problems of national scope were selected as requiring special research work:

1. Distribution and marketing of farm products.
2. Disposal of surplus farm products.
3. Factors influencing the quality of meats.
4. In home economics, vitamin contents of food in relation to human nutrition.
5. Rural home management.
6. Social organization in relation to permanent agriculture.

MUST SHOW RESULTS.—There is some question as to why no farm organization representative was invited to attend this meeting and assist in the work of preparing a research program with some practical understanding of the farmers' needs. The appropriation under the Purnell Act is not permanent, but is contingent each year upon the will of Congress, and the ability of the research workers to show that the results of their activities warrant the continuance of the increased appropriations.

POOR CROPS IN ARGENTINA.—Conditions thruout the world generally are not favorable to large agricultural production. In Argentina the farmers fear a shortage of livestock and dairy products during the approaching winter, according to reports to the Department of Agriculture. A poor growing season resulted in low stocks of alfalfa hay. Heavy losses of cattle are in prospect.—E. E. Reynolds.

Harrisburg Letter

MORE RURAL INSPECTION.—Plans for notable changes in the extent and manner of conducting the rural inspection of pupils are being worked out at the State Department of Health. One of the ideas is to provide medical going over and advice for youngsters before they go to school so that treatment aimed to overcome defects may be well started. Much of the inspection at homes and in the smaller rural schools will be in charge of nurses instead of doctors and the corps of nurses looking after children will be considerably expanded in the next year or so. Secretary of Health, Charles H. Miner, is working out some of these plans himself as he was one of the first to undertake inspection in schools in his home county of Luzerne.

MORE CARS FOR QUARANTINE.—Mobility of the state's Japanese beetle quarantine force has been laid out on a more extensive scale than heretofore and some of the $100,000 appropriation will be used to buy twenty small automobiles. These cars will be placed on road patrol duty, being capable of being shifted to sections where complaints arise of the manner in which the quarantine is regarded. The quarantine becomes effective this week, but the bugs are not looked for so speedily. The state will spend something like $60,000 the first year and $40,000 the second on the beetle war, trusting to Uncle Sam to help out on the second year.

STILL MORE ROAD PLANS.—State highway department engineers are pushing work on surveys indicating the state will continue advertising for bids well thru the summer, the idea being to get late work started and have it carried over into the new year. If this keeps up the 800 miles under contract figure will soon been passed. Working out of an understanding as to what shall constitute maintenance and construction and be paid for from bond proceeds or motor licenses will help get this program going.

WANT 150,000 FEET.—Managers of the State Farm Products Show, which will be held in Harrisburg for the tenth time next winter, are looking for 150,000 square feet. Last winter they had 110,000, but it was not enough. There were over 4000 exhibits and more are in sight.

SEEKING REAL DAMAGE.—State agricultural authorities are trying to find out what damage the frosts actually did in Pennsylvania. Much has been heard about havoc of frosts, but in some instances they did not occur, altho in others, such as Erie, the grape crop was hard hit. The reports on the frost damage will be interesting not only from a geographical standpoint. — Hamilton, Harrisburg.

New Jersey Letter

STATE SPEAKERS AT PICNICS.—The New Jersey Federation of County Boards of Agriculture has accepted many invitations to furnish state speakers at the picnics of the county boards of agriculture this summer. The call for speakers from the state organization during the last season has been practically up to the time of the personnel available, but the federation will accept at least one invitation from every county this season, to acquaint as many thousands of farmers as possible with the work of the Farm Bureau from a state and national aspect.

FALL LEGISLATIVE CONFERENCES. — The annual legislative conference of the representatives from all New Jersey farm organizations will be held in Trenton in September. Members of the joint legislative committee representing the Farm Bureau and the Grange, which has the annual conference in charge, will shortly set the date for the meeting. This last season the farmers' legislative committee backed thirteen agricultural measures, eight of which were added to the statutes .

CERTIFIED MILK PRODUCERS MEET.—New Jersey producers of certified milk met at Atlantic City May 25 to 26 with the Certified Milk Producers Association of America and the American Association of Medical Milk Commissions. The members later adjourned to the Walker-Gordon Farms at Plainsboro for a further meeting and a picnic. The growth of the consumer demand for the highest grade of raw milk was reported and the question of the regulations governing certified dairies was discussed from various angles. Seth Shoemaker, of Scranton, Pa., was elected president of the Certified Milk Producers Association and Dr. R. R. Ferguson was re-elected as secretary-treasurer.

MARKET FORMALLY OPENS.—The new Camden Municipal Wholesale Market is scheduled for a formal opening under the auspices of the Camden city officials and Charles C. Cook, market director, the first week in June. Progress in the building of wholesale stores and the improvement of the sheds adjacent to the market for farmers' use has been rapid, and complete facilities are now available for the operation of the market in a large way as a trading center on South Jersey products.—B.

New York Letter

STATE TO PROSECUTE CATTLE FRAUDS.—The resale of condemned tuberculous cattle in central counties has caused an investigation by five agencies of the state. The matter has been treated as a cattle fraud by New York papers rather than as a milk menace, yet a milk embargo has been barely averted. The state warns all milk companies to inspect every cow producing milk for the city market, else they will be prevented from shipping to New York. Most of the bigger companies have had men among the small army of inspectors who have been going over Cortland County cattle for the past two weeks.

NEW YORK FARM LAND SOUGHT. — Hundreds of families from the West and Middle West are returning to this state and settling on its farms every year as they find prices very reasonable now, and markets near at hand. Those who sell in the West report that they can buy here at half or two-thirds what they sold for and have a considerable sum for equipment and improvement.—M. G. Feint.

The too-full milk pail comes to grief

PROBABLY every farmer who ever owned a cow, has yielded to the temptation to fill the pail too full—only to have it bump against his knees, spill milk all over his feet, lose part of the contents and his temper in the bargain. A few steps saved—but much more lost!

That's like trying to save a few cents a gallon on cheap oil for your Ford. *The saving isn't worth the chance you take.* Judging your expected savings purely on a price per quart basis, the most you can save in a year is very little, perhaps $5.00.

But price per quart is no accurate basis for figuring oil costs. Price per mile *is*.

With inferior or incorrect oil your price *per mile* includes the prematurely-worn rings and pistons, the burned-out bearings, the quickly-formed carbon, the loss of power, and the increased gas and oil consumption that always follows low quality lubrication.

On a price per mile basis, Gargoyle Mobiloil "E" is the cheapest oil you can buy, and it will give you that full measure of economy without spilling trouble at your feet.

In the differential of your Ford you secure the same economy by using Mobiloil "CC" or Mobilubricant, as specified in the Chart of Recommendations. For your Fordson Tractor use Gargoyle Mobiloil "BB" in summer and Gargoyle Mobiloil "A" in winter.

Zinc Insulated
American Anthony Royal
U. S. and National Fences

The Test of Time

in service on the farm under all kinds of weather conditions is the only true test by which good fence can be measured. Knowing the extra long lasting qualities of Zinc-Insulated American, Anthony, Royal, U. S. and National Fences we give this

GUARANTEE:

Our dealer will hand you with every purchase of fence our written guarantee that it will equal or outlast in actual length of service any other fence now made, of equal size wires and used under the same conditions. Any buyer who can show that it fails to do so will be supplied with an equal amount of new fence free.

Our fences have always given every user the highest degree of satisfactory service. Their quality is the result of more than 25 years of experience, with the most advanced skill of workers and progressive methods of manufacture. Improvements constantly have been added, to make them last longer and give even better service.

When you buy any of our fences from your dealer, your investment is protected with guaranteed fence service. In their making we control every process from selection of ore to the finished product. We know what our fences are and stand back of them with this unqualified guarantee, based on our past record for producing QUALITY PRODUCTS.

(OUR FARM)
Where an Editor Works and Thinks

A MUCH needed May rain has arrived at last. After a stretch of twenty-three days in which only one-half inch of rain fell, when the average amount for that period is nearly three inches, we had a soaker. It appears to us that we have solved the question of rain production. Our vegetables and strawberries were badly in need of moisture, so we scurried around and rigged up a temporary irrigating plant. The pump was installed two weeks before, but other work prevented the finishing of a real system. However, we rigged up some pipe, hose and sprinklers and hitched the tractor to the pump and were applying water at the rate of about tweny-five gallons per minue. And oh, how the soil did drink it up! We had operated it about three hours when, glancing up at the sky, we found we would have to scurry for shelter as a good rain was evidently coming. And it did.

✦ ✦ ✦

MY REQUEST for information on machines for applying fertilizer to the row, or to side-dress rows, has brought several suggestions, all of which are appreciated. The poor success we had with the pictures run in connection with that article was a disappointment to us, but it is probably one of the means Fate uses to teach us humility as we were rather proud of the photographs and the scenes which they showed. However, we shall try it again some day when we have something which we think interesting or instructive.

✦ ✦ ✦

FOR the protection of our farm machinery, and also to be consistent with the advice we have spoken and written for many years, we erected an implement shed recently. It is sixteen by thirty feet in size and houses all our machinery and tools. It is of the shed-roof type, is boarded up on three sides and is roofed with matched boards covered with composition roofing. It is a grand and glorious feeling to realize during a down-pour that your expensive equipment is not out in the weather.

✦ ✦ ✦

OF THE many letters received from the friends of this column none has been more appreciated and interesting than the one received from a woman farmer in eastern Pennsylvania. It is an inspiration to me and because I believe it will be of interest to others the following extracts are given:

". . . The thought occurred to me that you might possibly have a one-row corn planter. If so, the application of fertilizer to the row would be a simple matter. Just remove the covering shovels from the rear and run it in the row and distribute the fertilizer. . . .

"After ten years of Philadelphia life I decided, with the cooperation of a very good husband, that we would spend the rest of our married life in the country. Not possessing the necessary cash to carry on the farming processes we decided that it would be best for him to continue to hold his position and for the past five years we have been trying to 'lick into shape' a forty-five-acre farm.

"We have had most of the time a reliable man who has just passed his eightieth birthday, but he is still able to care for the stock and do much of the lighter work. We have four young cows, most of them pure-bred, and we fatten about seventy hogs a year, and at the present time I am caring for about 600 young chicks. Our Collie pups bring in a little cash each year and we have fun having these healthy young animals about us.

"We, too, have a tractor and find it very good even here where stones are troublesome. Under our circumstances I find it necessary to run the tractor myself and find it not too hard to plow, harrow, disc and pull out stone and rocks.

"I am just finishing the planting of a young orchard of about 400 peach trees and 350 apples trees, with a few plums and cherries for good measure, and have been waiting for a shipment of raspberry plants.

"We have a back-breaking bed of strawberries and these, frankly, have beat me for I cannot keep down the runners and weeds. Failure to have the ground ready because of wet weather when the asparagus plants arrived caused a fumble in this project. We heeled them in (thinking in terms of trees) and now I find they are apt to die when transplanted. Would it be a good plan to let them stay and take them up in he fall for the winter? I would appreciate information on this subject."

✦ ✦ ✦

THIS much of the letter will show that the writer has the necessary grit and determination to make a success of farming. And what is well worth emphasizing, there is not a single note of fault-finding nor any sign of discouragement. No doubt, she has troubles and disappointments—everybody in every line of business has—but such things are important only when they are allowed to get the upper hand of one and cause him or her to turn sour and pessimistic. The really big problems of agriculture will eventually be solved by the kind of people who can solve their own questions, and who can keep sweet even in the midst of difficulties.

✦ ✦ ✦

AS I watch the hundreds upon hundreds of wagons and trucks daily passing my office window laden with fruit and vegetables on their way from Dock Street to every part of the city, I am reminded that the stuff all comes from places back in the country where thousands of men and women carry on, thru good times and bad, heat and cold, producing the first essentials of life. It is well that this class is made of the real stuff, else the race would perish.—R.P.K.

Not a Monopoly

THE case of the government against the International Harvester Company which was brought before the United States District Court of St. Paul was dismissed by that court recently.

After reviewing the history of the proceedings the court said that the evidence not only failed to prove that the International Harvester Company "has been or is unduly or unreasonably monopolizing or restraining interstate commerce in harvesting machines or their appurtenances in the United States; but in our opinion it conclusively proves that it has not done and is not doing so, that competition in the manufacture and sale of harvesting machines and their appurtenances in interstate commerce in the United States has been and is free and untrammeled, . . . that powerful and successful independent competitors of the Harvester Company contest the field with it and that in their presence it cannot and does not control or dictate the prices of the harvesting machines and their appurtenances which it and its competitors make and sell, that the prices of its machines and appurtenances to the dealers and to the farmers who use them, in proportion to their costs, have decreased and are low. The purpose of preventing undue restraint of trade is to prevent unreasonably high prices to the purchasers and users of the articles traded in. The evidence in this case satisfies us that these objects have been successfully attained under the decree of November 2, 1918, the defendants having complied with its requirements in their conduct of their interstate commerce in harvesting machines and their appurtenances since the rendition of that decree."

Planting Demonstrations

COUNTY AGENT W. H. DAVIS, Pike County, reports considerable interest in forestry planting as a result of three tree planting demonstrations held in different parts of the county by C. R. Anderson, forestry extension specialist of the Pennsylvania State College. District Forester Stadden attended one of the meetings. Orders for 20,000 trees for fall and spring planting were taken during the course of the meetings and applications for more trees have been received by the county agent since the meetings closed. These demonstration plantings are to be permanent and were placed along main roads where they should be the means of maintaining interest in forest conservation.

Similar demonstration plantings were held in Forest County by F. T. Murphey, forestry extension specialist, according to County Agent W. I. Gall. One planting was made on the W. A. Croasmun estate at Redclyffe and the other on the farm of L. V. Braden, Clarington.—A. L. B.

THE CHEERFUL PLOWMAN

The Team That Crowds

OLD BILL and Bess, when roads are wide, can pull a heavy load, but they are always sure to crowd when on a narrow road. Each one of them, it seems to me, is very much afraid the other one will gain an inch and push him from the grade, and spite of all that I can do and all that I can say they edge along and waste their strength in that unsightly way.

Now I contend on narrow roads if each would watch his step and do his bit along the way with conscientious pep then each could calmly move along and pull his normal share without excitement, fear and rush, or grievous wear and tear. But these old nags, I'm sad to say, in all their many days, have never learned, when roads dip in, that teamwork doubly pays!

Poor Bill and Boss, I must not scoff nor pass too many jokes for after all they're very much like very many folks; for many partners whom I know who have a common task work well enough when roads are wide, as well as one could ask, but when the highway narrows down then each one seems afraid the other one may gain an inch and push him from the grade.

Good teamwork is all right, they think, when there is room to spare, but in a pinch each starts to crowd to hold his normal share! Poor folks they never grasp the truth, they number with the host who can not see when roads draw in then teamwork counts the most!—J. Edw. Tuft.

The BRAND NAME that Leads in the Movies

IS there enough change in your life, enough play to balance the chores?

Think this over—city folks may have all the entertainment they want. Farm folks certainly have too little.

Every day has an evening, and if you stay home or drudge every evening the engine of life is certainly not hitting on all six for you.

Swing into step with the leading brand of motion pictures, Paramount. See a Paramount Picture this week and start your happier life right away! *Some theatre near you is scheduling Paramount Pictures now.*

Paramount Pictures are leaders because they are made of the same stuff as your longings for adventure, romance and wholesome entertainment.

You will be delighted with the tonic that Paramount Pictures provide, and so will your neighbors. Social intercourse is brightened and the theatre showing Paramount Pictures becomes the meeting place of the community.

Such Paramount Pictures as The Covered Wagon, Manhandled, North of 36, Merton of the Movies and Triumph, provide happy entertainment for all. People drive many a mile to see them. The young folks don't leave home for the cities!

Life is more animated these days, what with autos and better roads and radio and Paramount!

Paramount will give you a great 1925 —*if you will*—showing you all the world in action at your own theatre.

Make it tonight!

Kills 'em!

Calso does that

Chewing insects, the hard-to-fight kind that eat up your potato, tobacco and tomato plants don't have a chance after you spray with Calso.

Calso also prevents blight, and keeps fleas and beetles away.

Calso is safe. Doesn't injure the foliage.

It increases growth.

Works equally well as a spray or for dusting.

"Calso certainly is a perfect potato, truck and tobacco spray. It saved my vegetables from blight and insects. I gained in crops and income. —Lewis Loyen, Pa."

Ask your dealer about Calso.

If he can't supply you, write to us for information and prices.

Manager Pomona Gardens, Newark, Delaware

How about This Plan?

I propose to plant onion seed of White Globe and Prizetaker varieties in my hotbeds and cold frames after the last of the tomato and pepper plants are out, and expect to follow the sets with head lettuce for use in December. Is this idea all right? —A. T., New Castle County, Del.

There are several things wrong with this plan. The first is that the varieties are not right, for altho sets may be grown from either of these, and altho the white sets bring the highest price in spring, both whites and Prizetakers are hard to keep over winter without special storage facilities. They start growth too early in spring, and there is heavy waste on this account. It will be better to select a yellow onion like Globe Danvers, which keeps better.

The soil in the beds is likely to be too rich for sets, altho there is a tendency to use more manure and fertilizer for sets in the field than used to be the case. It is possible that the sets will mature all right even in the rich soil, if you sow them thickly enough, but you may find them maturing too late to get in the fall lettuce, which ought to be set early in September. Little except a spinach crop could be planted with any certainty after these sets are taken out. It will be better to plant the sets in the field, and plant beans or transplanted beets in the frames, if they are not too deep.—W.C.P.

What Is the Reason?

I have been using 7-6-5 and 5-8-5 fertilizers for canning house tomatoes, some in the row and some broadcast. Neighbors who use cheaper mixtures and who do not use as much of them as I do seem to get just as good tomatoes. Can you tell why that is?—L. A., Cumberland County, N. J.

If your land is somewhat sandy I judge that these very high grade fertilizers, when applied in the hill, may have delayed the start of your plants somewhat, even if they did not kill them outright. Both of these mixtures are made chiefly for application in spring, and, therefore, usually contain their nitrogen pretty largely in a soluble form, a fact that fits them well for spring use but not so well for summer use on sandy soils, especially for hill and row applications. A 4-8-7 fertilizer with part of its nitrogen in organic form will be better for the canning crop tomatoes, not only because it is cheaper but also because it is less likely to cause burning.

It is a question, too, whether you are justified in taking the trouble to put any of the fertilizer in the row. This may be all right for melons, which are usually more widely spaced, but the tomatoes will usually get most of the fertilizer if it is broadcasted, and there is then no danger of burning when the plants are first set out. On heavier soils farther north, thru which the roots grow perhaps more slowly than thru sand, row applications are sometimes worth while.—W. C. P.

Tourist—I suppose this rain will do the crops a lot of good, Pat?

Pat—Ye're right, sor. An hour of ut will do more good in five minutes than a month of ut would do in a week at any other time.—Tit-Bits.

Setting Out Tomato Plants

A FRIENDLY argument occurred the other day regarding the setting of tomato plants in times of drought. One man said that with the soil as dry as it was at that time, no setting could be successful enough to be profitable. Another man argued that there is a big difference in the time of day plants are set out, and that by choosing the right time of day, fair success may be obtained even in very dry weather. Of course, newly plowed land in dry weather never makes a successful transplanting method easy to choose; if the undersoil is dry, even watering each plant will not guarantee a stand. Yet I think there is considerable to be gained by choosing afternoon and evening for setting, in place of morning.

There are some growers who think that moderate wilting is good rather than bad; surely the plants will survive moderate wilting if they are set out in the afternoon and have the following night to straighten up. Morning planting in dry weather with warm winds and no way of watering is not often to be attempted.

First Maggots in Years

For the first time in several years cabbage maggots have been very destructive on our place. Rather the maggot should be called the cauliflower maggot, since it attacked more cauliflower than cabbage plants. The plants are too far gone for help, but we have at least learned that for the next few years it will be wise to take precautions against the maggot on the early crop. Corrosive sublimate solution we think promises more economical control than tar discs, altho on a small scale the discs are certainly safer than the poison.

This year we are providing cloth protection for the late cabbage seed bed, on the chance that the flies coming from the early crop will be looking for new plants on which to lay their eggs. Infection on late cabbage is not common every year; last year we failed to find a single plant attacked by maggot.

Aphis on Tomato Plants

Another pest seems likely to cause trouble this year, and that is the aphis or louse on tomatoes. I have seen many of these tomato plant beds this year, and, of course, if they are not destroyed in the seedbed they will go to the fields and be almost beyond control.

Was it in the summer of 1918 that the last destructive epidemic of tomato lice occurred in the Middle Atlantic States? As I remember that year, poor success was obtained in ridding the fields of the aphis; but this year, if the insect is found in the seedbeds, an early step toward control can be taken by dipping the plants in tobacco extract solutions.

Experiments with calcium cyanide will probably show that this insecticide will be even more serviceable than the tobacco, as a fumigant, because it acts quickly and surely. There are some disadvantages, too, in wetting the leaves of tomato plants by dipping them in tobacco solutions; unless the plants are set quickly they spoil when the foliage is wet.—W. C. P.

Cabbage Imports

NEW YORK shipped as much cabbage into fifteen large Pennsylvania markets during 1924 as was raised in the entire Keystone State, according to the Bureau of Markets which has completed a survey of the carlot receipts of fruits and vegetables. Receipts into the surveyed markets from all states totaled 4229 cars last year compared with 4236 cars in 1923. The only important sources of late cabbage in Pennsylvania cities were New York with 1874 cars and Pennsylvania with 132 cars. Receipts of early cabbage in the larger markets of the state were mainly from these states: Texas, 510; Florida, 476; Virginia, 415, and South Carolina, 180. Ohio, whose cabbage is classed between early and late production, supplied 232 cars.

Large Supplies for Philadelphia

Eighty per cent of the 4229 cars were sold in Philadelphia and Pittsburgh, and eighty per cent of the 1874 cars from New York likewise moved thru these cities. These two markets do not draw on the same states for cabbage supplies with the exception of New York and Texas. Most of the receipts from Florida, South Carolina and Virginia were recorded in Philadelphia, while the majority of the cabbage shipped to this state from Ohio and Mississippi was found in Pittsburgh.

Two-thirds of the 132 cars from Pennsylvania were handled in Pittsburgh. Other markets which received cabbage from this state in carlots were: Lancaster, 12; Harrisburg, 9; Wilkes-Barre, 8, and Scranton 7.

Erie County a Big Shipper

Erie County is the commercial cabbage area in this state. The U. S. Bureau of Agricultural Economics reports that 295 cars of cabbage were loaded at Pennsylvania points for shipment during 1924. Three-fourths of these originated in Erie County, a portion of which moved to Pittsburgh. Tioga County shipped 25 cars during the year, probably to eastern Pennsylvania markets. Sixteen cars were shipped from Lancaster County, practically all of which were consigned to the Lancaster market.

Crawford's Dairy Show

THE spring show and sale of the Crawford County Dairy Improvement and Sales Association will be held on the old fair grounds near Cambridge Springs, June 23, 24 and 25. The following breeds will be shown: Holstein, Guernsey, Jersey, Milking Shorthorn. There will be ribbons for all classes, many cash prizes, and special prizes for the boys' judging contest and the boys' calf club exhibits. The official judges will be chosen from the Extension Department of the Pennsylvania State College.

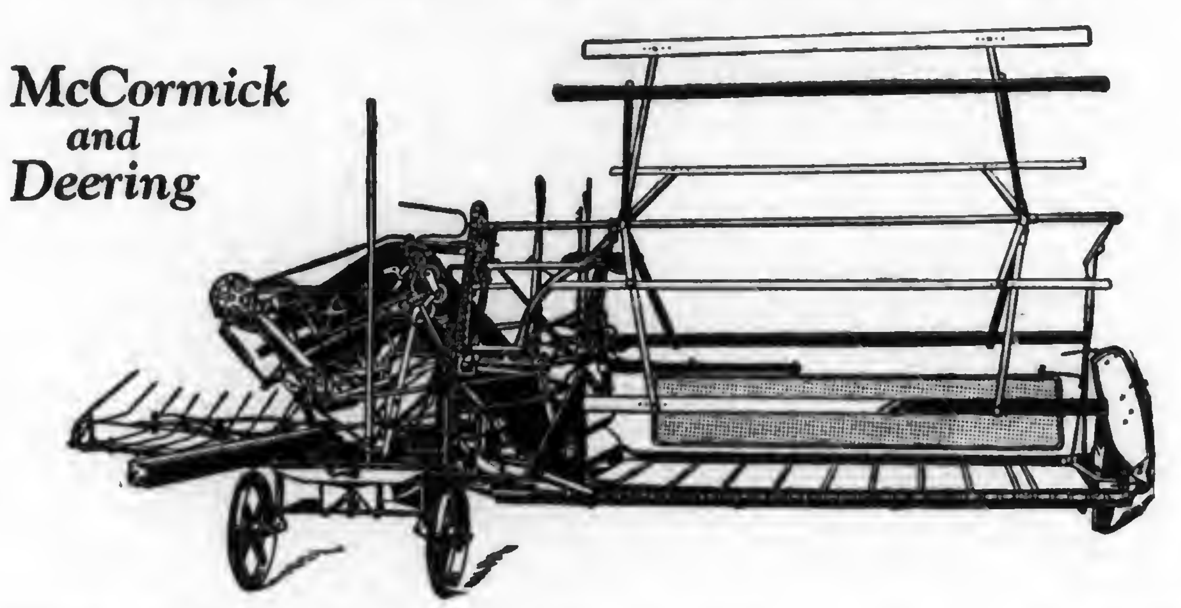
Visitors Who Will Attend

Among the visitors who are expected to attend the show and sale are: F. P. Willits, State Secretary of Agriculture; J. M. McKee, Deputy Secretary of Agriculture; E. B. Fitts, in charge of State College dairy extension work; A. A. Borland, head of the Department of Dairy Husbandry at the Pennsylvania State College and Dairy Editor of Pennsylvania Farmer. There will also be a health cartoonist from the Pittsburgh District Dairy Council.

Those interested in the show or sale may secure further information by writing W. C. Stuart, Farm Bureau Office, Meadville, Pa., who is field agent of the Crawford County Dairy Improvement and Sales Association.—S.

It takes fewer bushels of wheat to buy a binder today than it did in 1913-'14—before the war!

McCormick and Deering



THE BINDER *and* GRAIN belong together; you must figure them together. When you consider the present prices of wheat (lower now than they were) and of all other grains, too, you will realize that the binder now costs you less in terms of grain that it would have cost twelve years ago.

It was poor economy to use an over-repaired binder in 1913 but it will be worse economy to run a worn-out machine in 1925. You cannot afford the risk. Grain prices are too high for that, and binders—which have always sold at extremely low figures, considering general price levels, quality and pound-for-pound values—have been lowered further.

When you make use of the larger binder capacities and the crop-saving improvements, a new binder in your grain may pay back its full purchase price in one harvest or two, in the savings in grain and time.

Don't take the chance of a breakdown or steady loss of high-priced grain this season. Harvest the year's crops with a brand-new improved McCormick or Deering grain binder.

INTERNATIONAL HARVESTER COMPANY
of America (*Incorporated*)
606 So. Michigan Ave. Chicago, Ill.
93 Branch Houses in the U. S.; the following in Pennsylvania Farmer territory—Elmira, Harrisburg, Philadelphia, Pittsburgh.

You owe it to yourself to go in at the McCormick-Deering dealer's and look over the new McCormick or Deering Grain Binder

If you are the owner of an old, outdated binder, here are a few of the strong points in the 1925 McCormick and Deering binders which your machine is lacking today: *Better Construction; Improved Bearings; Improved Bevel Gears and Chains; Lighter Draft; Outside Reel Support; Perfected Binder and Knotter; Grain-saving Floating Elevator; Improved Bundle Carrier; Tongue Truck for Steadying and Carrying Loads.*

. . .

Is your binder of 6-ft. cut? Remember that in these days of high labor costs a new 8-ft. McCormick or Deering binder will *cut one-third more grain*, saving time, labor, money.

. . .

You will be interested in the remarkable *McCormick-Deering Tractor Binder*, made to be run by power take-off from the McCormick-Deering Tractor—the fast harvesting outfit cutting 10-ft. swaths and doing as much work with one man as two men can do with two regular 7-ft. binders.

. . .

Binder Twine: Arrange early for your harvest twine requirements. Insure saving all the grain and preventing delay and trouble by ordering a supply of McCormick, Deering, or International, *wound in the convenient "Big Ball."*

"GOOD EQUIPMENT MAKES A GOOD FARMER BETTER"

OBERCO
(PROTEIN—MINERAL FEED)
for Hogs, Poultry & Dairy Cattle

Poultry, swine and dairy cattle must have protein and minerals if they are to get the best from their farm ration. Mix Oberco with the feed you are using and see the difference.

Write for details. Practical poultrymen, hog raisers and dairymen have tried Oberco and it has produced surprising results. Write for booklet.

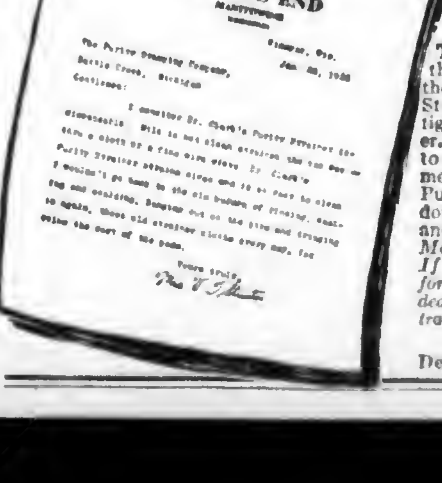
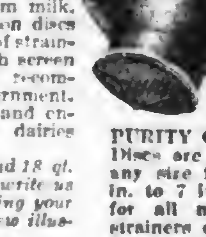
"I Wouldn't Go Back to the old burden" says Mrs. Streator of Wis.

Her letter shows the drudgery and inefficiency of ordinary milk straining methods. You can rid yourself of all this dirt and drudgery and, at the same time, be assured of absolutely clean milk by using—



DR. CLARK'S PURITY MILK STRAINER

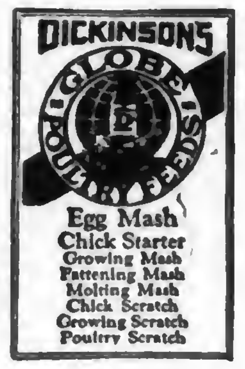


The only strainer on the market that is guaranteed to remove ALL the dirt and sediment from milk. Strains thru sterilized cotton discs tightly clamped to bottom of strainer. No cloths or fine mesh screen to clean. Only method recommended by U. S. Government. Purity Strainers are used and endorsed by World's largest dairies and condensaries.

Made in two sizes, 10 qt. and 18 qt. If your dealer hasn't them, write us for literature and prices, giving your dealer's name. Ask for new illustrated folder. Send today!

PURITY STAMPING CO.
Dept. B Battle Creek, Mich.

PURITY Cotton Discs are made in any size from 5½ in. to 7 in. diam., for all makes of strainers or filters. Send for trial order.



Don't Neglect Your 1/2 Grown Pullets

HUNDREDS of thousands of dollars are lost yearly by poultry raisers in eggs their hens could have laid—*but did not*. This loss was due to the mistaken idea that half-grown pullets can be neglected until they begin laying.

Half-grown pullets cannot be fed haphazardly if they are to lay *all* the eggs Nature intended. If they are to start laying at an early age and be consistent producers in the fall and winter months when eggs are at their highest price, they must be properly fed now.

Early Fall Layers Make the Big Profits

If your half-grown pullets are to pay you maximum profits, you must give them the food material they need to become egg-laying "machines" of the highest efficiency. Neither the baby chick starting feed nor the ration for mature birds is suitable for this critical period in a pullet's growth.

A special growing mash is absolutely necessary. It is an indispensable unit in poultry feeding. No poultry raiser should attempt to do without a recognized growing mash.

GLOBE Growing Mash

This scientific growing mash is based on experiments and an expert knowledge of poultry nutrition needs. It is backed by our experience of 22 years. Rich in vitamines. Contains those food elements, properly balanced, that make for healthy growth, sturdy frames, big bones, firm flesh, sinewy muscles, glossy plumage—and VIGOR. Once used, it will always be part of your poultry feeding program.

See Your Globe Merchant!

Order a bag at once. Your half-grown pullets need Globe Growing Mash. Not to feed it will be costly. Its use pays a profit in more eggs. Feed your half-grown pullets well now—they'll lay more eggs next fall and winter. Order a bag today sure.

Chickens Pull Feathers

Will you please advise me what to do and what causes my chickens to pull their feathers out and eat them? They pull their own feathers and those of the other chickens. I feed bran mash, scratch feed and table scraps. Hens lay well and are good breeders.—J. C. Y., Lancaster County, Pa.

Feather eating seems to be a vice caused by idleness. A lack of material in the ration which they crave may start the habit. However, most of the cases of feather eating I have seen have occurred in town flocks in small yards or in farm flocks enclosed in small areas during the late winter. The best remedy is to turn the flock on range, then the birds become separated and interested in other things and stop pulling feathers.

During the late winter or early spring the flock that does not have plenty of scratching litter and a balanced ration is apt to fill up on whole grain and then stand around. They pick at each other and finally a bird draws a feather with a bit of blood on the end. The bird finds the feather good and teaches the habit to other members of the flock.

Painting the feathers does not seem to stop the habit. Remove the principal offenders and it will often stop. Supply deep litter so the hens will exercise. Provide a balanced dry mash so the hens can have something to eat of a bulky nature whenever they are hungry. Supply green feed if they do not have a succulent supply on the range. Hens without green feed and a bulky mash sometimes develop depraved appetites and fill up on feathers, dry grass and a variety of rubbish which clogs the crop and causes serious digestive disorders. The busy well fed hen on a suitable range seldom develops bad habits.—R. G. K.

Cause of Blackhead

I read in Pennsylvania Farmer, of April 25, that one of your contributors, signing name as H. B. T., Butler County, Pa., has a cure for blackhead. We are troubled a great deal with blackhead in turkeys. It starts when about four to six weeks old, and we seem to find no cure. When a turkey is cut open the liver is covered with sores. If you know of any preventive or cure I would appreciate it very much if you would give me advice. What do you think causes blackhead?—Mrs. H. W. P., Worcester County, Md.

Scientists claim that blackhead is caused by a microscopic protozoon which is found in the ceca and liver of diseased birds. The disease passes from the ulcers thru the droppings which in turn contaminate the soil and infect other birds.

When soil is badly contaminated with blackhead it is frequently best to discontinue turkey raising for a few years. The disease is often prevented on a farm for a long time by keeping the stock free from disease and giving the poults plenty of range on clean soil.

Frequently we hear that a new discovery has been made which is a sure cure for blackhead. Usually these cures are not backed up with thoro experimental work to prove their value. After a thoro test they have been found of little value. At present we cannot recommend medicine for blackhead. It is hoped that more work will be done along that line and a cure will be found. After examining the liver of a badly diseased bird you can readily see how little help could be given by the mild disinfectants sometimes advised for treating blackhead.—R. G. K.

Weak Chickens

I have some registered Barred Rock chicks seven days old and on the sixth day one seemed chilled and was trembling all over. Now almost all of them are the same way. They first start to tremble and stagger around then they sit back on their knees and tremble and jerk for two or three hours then die. I lost six in twenty-four hours. Could this be leg weakness? Would you think it contagious? They have been fed baby chick feed and diarrhea tablets in their drinking water. All the older chicks are strong and healthy. They are all being raised with the hen.—E.N., Chester County, Pa.

The chicks that tremble and then die do not necessarily have what is termed "leg weakness." Cases of leg weakness often occur among chicks previously strong and healthy. They do not seem sick for the apparent paralysis of the legs. I think your chicks that have died have been chilled, overfed or infected with white diarrhea. A few chicks may have weak sparks of life and die in the manner described altho the care is all right. Sometimes young chicks raised among older stock die from weakness caused by the constant trampling of the heavier birds.—R. G. K.

Testing Eggs

THE best test of the flavor and quality of an egg is in "the eating." It is practically impossible to tell by looking at a dozen eggs just which ones are good and which are bad. Dealers use a candling machine which gives them an X-ray view of the contents of an egg, but this method is not always practical for home use.

A simple method for home testing is the use of a pan filled with water. A fresh egg when placed in the pan will lie flat on the bottom. An egg that is somewhat older will tilt with the large end upward and an old egg will float. The reason for this is that when the egg is fresh laid the contents nearly fills the shell. As the egg cools the contents shrinks leaving an air cell or bubble in the larger end of the egg. The water of the egg gradually evaporates and this process is more rapid if the eggs are kept in a warm place. This evaporation causes the air cell to grow in size and the larger this cell, the more readily the egg will float.

Test for Evaporation Alone

There are two points that should be remembered if this method is used: First, this is only a test for relative evaporation and its not a final test as to the interior quality of the egg; secondly, eggs should not be tested this way if they are to be stored for a long period of time because of the effect of moisture on the shell.

Eggs that rattle or pound when shaken are not fresh, but still may be wholesome and edible. They should, however, be broken in a separate dish before using. Shells with a grayish appearance denote that the eggs have been incubated or washed. If the eggs have been cleaned by acid the eggs appear very porous. Eggs that have been cleaned this way should be avoided since they do not keep well.—W. R. Whitacre.

Care of Chicks

Please advise the amount of scratch feed to use in connection with a seventeen per cent protein mash in hoppers. The chicks also receive two pounds of pure buttermilk per 250 chicks. How old must chicks be before fire is not needed in the brooder stove? My neighbors tell me that my March chicks will not molt this fall and then I will have old chicks already. Is this correct? Do they molt for the large poultry raisers? Is their not a certain way to feed to prevent molting at this stage?—J. H. K., Lebanon County, Pa.

The amount of scratch grain per chick per day varies so greatly from day to day that I cannot give you any useful figures. It also depends on the breed and the range and the development of the chicks. The practical way is to use the dry growing mash before the chicks at all times. Then give the amount of scratch grain that they will clean up in about fifteen minutes. Only give enough to satisfy their appetites so no grain will be left on the ground to become dirty and moldy. Judge the grain supply from day to day by the appetites of the chicks.

The time to discontinue a brooder fire depends more on the weather than the age of the young chicks. When chicks are about six weeks old and well feathered they begin to huddle away from the stove, often sitting around the walls of the colony houses as if the stove heat made them uncomfortable. Then on a very warm day the fires are allowed to die out and not rekindled unless an unusually late blizzard or cold rainy night should make additional heat desirable.

The Feed Used to Prevent Molt

Heavy breeds hatched in March do not usually molt the first year. March hatched Leghorns often molt the first fall, especially if they are forced for late summer egg production. You can retard the molting by heavy grain feeding without the dry mash which contains more of the egg-making materials.

The practical way to control this molting problem is to hatch heavy breeds in March and April and the light breeds in April and May. Then avoid forcing the pullets for early maturity. When the heavy breeds are eight months old and the light breeds are six months old it is time enough to use the egg ration and begin to develop them for fall and winter egg production. This does not mean to underfeed. Keep the pullets growing but leave out the meat scrap in late summer if they show a tendency to lay too soon.—R. G. K.

Ration for Turkeys

Will you please advise me what to feed young turkeys, how to raise them, and what to do for the yellow diarrhea?—Mrs. W. A. D., Lebanon County, Pa.

A good first feed for poults is dry bread moistened with milk and squeezed nearly dry. This can be used for a few days and the birds worked over to fine chick scratch feed. Larger grains can be used later like whole wheat and cracked corn. Fine chopped boiled egg mixed with corn bread crumbs is a good starting feed.

Turkeys are insect and grain eaters and will usually thrive on a good range with the addition of scratch feed and clean sour milk. Rolled oats mixed with hard boiled eggs is a good feed for poults until they reach the third week. Do not use sloppy mash feeds. Give the water in sanitary fountains so they will not walk in the water and become wet and chilled.

The yellow diarrhea may be due to blackhead for which there is no cure. Perform a postmortem on any birds that die and note the condition of the liver.—R. G. K.

Empire Electric Milker Puts Bigger Profits in Reach of Small Dairies

WHENEVER a milking machine salesman stopped his car in front of a small dairy, he used to prepare to hear an old story—

"I've only got a few cows and it's cheaper for me to milk by hand."

Perhaps the farmer had figured up costs. Maybe he was just "getting rid of that salesman."

In either case, the farmer was absolutely right—he couldn't afford a milking machine—*so long as milking machines were all designed for big dairies.*

Empire Advantages

1. Teat cup lining is hand made and has linen inserts. Basic Empire patents cover these teat cups—they give the only complete three-sided massage, duplicating the calf's suck.
2. Standard Empire Milker Units used with Empire Electric or Engine type Pumping Outfits provide a practical size for *every* dairy of 6 or more cows.
3. Single or double units to meet your requirements.
4. Durable rubber parts that stand boiling.
5. Single pipe line with no complicated or moving parts to wear and get out of order. Clean. Costs less.
6. The Simple Pulsator guaranteed 4 years against wear. Only one Pulsator needed for single or double unit.
7. Low power cost—¼ H.P. outfit milks 2 cows at once—larger sizes proportionately economical.
8. Sanitary claw with automatic shut off and without moving parts to wear and get out of adjustment.

Now comes the Empire Electric Milker designed to meet the requirements of the dairy with *six* cows or more. It helps the small herd owner make as much per gallon on milk as the big dairyman.

The new Empire Type R Vacuum Pump, operated with a ¼ h. p. electric motor, made this great advance possible.

The Empire Electric uses *standard Empire Milker Units*—the Units that have made the Empire the biggest seller in the milker field. They are light, easy to carry, simple in construction and, above all, their efficiency has been proven by more than 12 years of successful operation.

And behind the Empire Electric Milker stands Empire's long experience and reputation for leadership in the milker field. You owe it to yourself to send for the free Empire catalog No. 33. It points the way to bigger milk profits for you.

How It's Done

How do you take off a calf from milk to grain and at what age?—W. E. D.

Let the calf stay with its dam from one to three days, then remove it and teach it to drink whole milk. This can be done by allowing the calf to suck your finger and then immerse your hand into the milk. The calf will continue to suck your finger and thus draw milk into its mouth. The finger may gradually be withdrawn from the calf's mouth and after a few feedings the calf will drink without the finger. After the calf has drunk its milk, a little dry grain such as wheat bran may be thrown into the milk pail. In sucking the last small amounts of the milk from the pail, the calf will get a taste of the grain and in a short time will learn to eat dry grain. Most calves will learn to eat grain when they are ten days to two weeks of age.

Gradually change the calf onto skimmilk or skimmilk substitute after it is three weeks of age. Allow the calf to have all the good clover hay it will eat. It will begin to nibble hay by the time it is a week or two old. Keep the calf on skimmilk as long as possible. If it gets skimmilk until it is six months of age or more, it will do better than when weaned at an earlier age.—A. A. B.

Can You Help Me?

1. As a cow dries up preparatory to calving how can I determine how much and what to feed her? Is there any formula for determining the quantity, at say a month before due?

2. Will you please tell me what to do in way of preparing the cow for calving, should feed be reduced, how much and when should cow be douched and what is the best material to use for douching? When should feeding be resumed, general information?

3. Can you tell me of any definite way of determining if a cow is with calf?—W. E. D., Washington County, Pa.

1. The amount of grain fed to a cow when she is drying off depends upon her condition of flesh. She ought to be put into good flesh by the time she freshens. If she is in pretty good condition when she is drying off, not much grain will be required, if thin, she ought to have a liberal allowance of grain. A fair allowance would be four to eight pounds of grain daily according to her condition.

A good grain mixture to feed a cow when dry may be made up of 300 pounds of corn meal or hominy; 200 pounds of ground oats; 200 pounds of wheat bran, and 100 pounds of linseed oil meal. About a week before the cow is due to freshen, the corn should be taken out of the mixture and the amount of grain fed cut down about half.

2. The feed should be reduced for about a week or ten days before the cow is due to freshen. It is unnecessary that the cow be douched unless she does not freshen normally.

Veterinarians are getting away somewhat from the practice of douching cows. It was formerly very common. It would only perhaps seem to be advisable where the cow has had retained afterbirth, or where there was a disease of the uterus. A one per cent water solution of liquor cresolis compound may be used for this purpose.

It is advisable to place the cow in a box stall with plenty of good, clean bedding some few days before she freshens; see that she gets plenty of water to drink. It should not be ice cold, better to warm it both a few days before and a few days after a cow freshens.

For the first twenty-four hours after the cow freshens she will need no grain except a couple of quarts of wheat bran with scalding water poured over it and a little salt added so as to make a thick mash. Feed it while warm. About twenty-four hours after she freshens she may be fed a grain mixture such as that already mentioned, without corn. This may be fed for a couple of days and then the regular mixture which you are feeding your herd may be gradually worked in.

How Much to Feed

Do not feed the cow much grain at first, about four to five pounds a day will be sufficient to start with, allowing her half of the grain in the morning and half at night. Then increase this amount gradually at the rate of about one-half pound per day until she gradually comes up to a full allowance of grain which will be approximately at the rate of one pound of grain for three to three and one-half pounds of milk if she is a Jersey or Guernsey, and one pound of grain for four to four and one-half pounds of milk if she is a Holstein, Brown Swiss or Ayrshire.

The grain mixture to use will depend upon the kind of roughage you have available and whether you have any home-grown grains to mix with purchased concentrates. If your roughage is clover hay and corn silage a good mixture can be made up by using 100 pounds of corn meal, or hominy feed, or corn and cob meal, or ground barley; 100 pounds of wheat bran or ground oats; 100 pounds of cottonseed meal, or gluten meal, or soy bean meal, or peanut meal, and 100 pounds of linseed oil meal.

3. Sometimes one can tell whether a cow is with calf or not by pressing on her flank at the rear part of the body. The movement of the calf can sometimes be felt. It takes an experienced person, however, to be sure in the matter. A veterinarian can tell by examination whether the cow is in calf or not.—A. A. B.

Dairymen's Convention

THE annual meeting of the Dairymen's League Cooperative Association, Inc., will be held June 18 at the Hotel Pennsylvania, New York City. More than 2000 dairy farmers, representing the owners of one million dairy cows who supply New York with fresh milk every day, will attend the convention. These farmers will come from the various dairying sections of the following states: New York, Pennsylvania, New Jersey, Vermont, Massachusetts, and Connecticut.

The present membership in the League is sixty-five thousand, every one of which is a dairy farmer producing milk as a business. During the fiscal year ending March 31, 1924, these farmers marketed $75,000,000 worth of milk and milk products thru their organization.

This new
"Low-Pressure" Tread Paves a Country Road

HERE is the latest thing in Balloon Tires—the new, flat "Low-Pressure" Tread.

It gives 15% to 25% more road contact than a round tread.

This eliminates early and uneven tread wear.

It permits you to run your tires at the low inflations necessary to *real* balloon cushioning.

It gives better traction, better non-skid protection, easier steering and greater stability.

It is as necessary to successful Balloon Tire performance as Web Cord—the only cord construction in which the individual cords are webbed together with pure rubber latex without injurious chemicals.

Both are exclusive with U.S. Royal Balloon Cords, and give an extremely strong yet flexible tire that can be run at *real* low inflation without injury.

Empire Electric Milker Puts Bigger Profits in Reach of Small Dairies

WHENEVER a milking machine salesman stopped his car in front of a small dairy, he used to prepare to hear an old story—

"I've only got a few cows and it's cheaper for me to milk by hand."

Perhaps the farmer had figured up costs. Maybe he was just "getting rid of that salesman."

In either case, the farmer was absolutely right—he couldn't afford a milking machine—so *long as milking machines were all designed for big dairies*

Now comes the Empire Electric Milker designed to meet the requirements of the dairy with *six cows* or more. It helps the small herd owner make as much per gallon on milk as the big dairyman

The new Empire Type R Vacuum Pump, operated with a ¼ h.p. electric motor, made this great advance possible.

The Empire Electric uses *standard Empire Milker Units*—the Units that have made the Empire the biggest seller in the milker field. They are light, easy to carry, simple in construction and, above all, their efficiency has been proven by more than 12 years of successful operation.

And behind the Empire Electric Milker stands Empire's long experience and reputation for leadership in the milker field. You owe it to yourself to send for the free Empire catalog No. 33. It points the way to bigger milk profits for you.

Empire Advantages

1. Teat cup lining is hand made and has linen inserts. Basic Empire patents cover these teat cups—they give the only complete three-sided massage, duplicating the calf's suck.
2. Standard Empire Milker Units used with Empire Electric or Engine type Pumping Outfits provide a practical size for *every* dairy of 6 or more cows.
3. Single or double units to meet your requirements.
4. Durable rubber parts that stand boiling.
5. Single pipe line with no complicated or moving parts to wear and get out of order. Clean. Costs less.
6. The simple Pulsator guaranteed 4 years against wear. Only one Pulsator needed for single or double unit.
7. Low power cost—¼ H.P. outfit milks 2 cows at once—larger sizes proportionately economical.
8. Sanitary claw with automatic shut off and without moving parts to wear and get out of adjustment.

Feed for Pigs

I have a number of young pigs that are from four to six weeks old. Can such pigs be successfully developed without the use of milk?—H. A. C.,

It is not necessary to have milk to grow pigs successfully. There are thousands of pigs developed each year that never receive milk of any kind except the dam's milk during the suckling period.

It is necessary to give your pigs a well balanced ration with plenty of room for exercise. A very desirable combination of feed consists of the following mixture by weight: Corn meal or ground barley, four parts; wheat middlings, three parts, and high-grade digester tankage or fish meal, one part. The mixture may be hand fed or given in a self-feeder.

If any of the pigs are to be retained for breeding purposes they should be hand fed as they will become too fat and not grow out properly when allowed all the feed they will consume. The combination suggested should be fed up to the time when the pigs will weigh about 100 pounds. At this weight the wheat middlings should be gradually eliminated and the amount of corn or barley increased so that when the pigs weigh about 140 pounds they will be receiving a ration consisting of ten parts of corn or barley and one part of tankage or fish meal, which combination should be used up to the time the pigs are marketed.

Rape for Pasture

The cost of producing pork can be materially reduced by providing a supply of pasture during the summer. For mid-summer pasture, Dwarf Essex rape will make excellent pasture. This should be seeded on well prepared ground at the rate of eight pounds per acre. It can be pastured when about eight inches high and will supply excellent forage all summer if it is not pastured too closely.

If the pigs are fed on pasture the grain should be hand fed so the amount allowed daily can be limited and the pigs forced to consume more of the forage crops. By following this method of feeding the rate of gain will not be quite as rapid as when the pigs are given a full allowance of grain, but the cost of producing pork can be reduced from twenty to thirty per cent.—W. H. Tomhave.

Dipping Sheep

I find that my mature sheep and lambs are covered with ticks and lice. What can I do to get rid of them?—R. C .W.

The easiest way to rid the sheep of the ticks and lice is by dipping them twice a year. This should be done while the weather is warmer.

In the spring it should be done after the sheep have been sheared. The dipping will destroy the live parasites but will not destroy the eggs so that it will be necessary to repeat the dipping after ten days or two weeks. In the fall the dipping should be done before cold weather sets in.

Follow Directions Carefully

Home preparations may be used but the best material to use is a standard sheep dip. The directions for using the dip are usually given on the container and should be carefully followed.

The customary method of dipping sheep is to use a tank specially made for this purpose, but it is not necessary to go to this expense for a few head. The solution can be put in a barrel or any tank that may be on the place. The sheep should be dipped so that all parts of the animal are covered with the solution. The dipping will not only destroy the parasites, but will give the skin a healthy condition.—W. H. Tomhave.

One Spot—
Where a De Laval will convince you of what it can do
~*Try One on Your Own Farm*

If you are not already convinced of the superiority of the De Laval Cream Separator, there is a simple and easy way to settle this question to your own satisfaction.

Ask your De Laval Agent to let you try one—he will gladly do so, free of charge. Then use it under your own conditions. You will soon be convinced of its superiority, and know why. Run the skim-milk from your old separator through the new De Laval. You may be surprised at the amount of cream the new De Laval will get from it; and if it does, then trade in your old machine as partial payment.

Riverside
Oversize Cord TIRES and TUBES

Quality Equal to the Best at Prices Very Much Lower

Forget that the price is low. Just consider *quality* alone. Compare service and mileage; and you will find that Riverside Tires give you all you get in any tire—give you just as long mileage, just as satisfactory service.

Riverside Tires are *not made to sell at a low price*. They are made *to be as good* as any tire. They cost just as much to make, just as much for fabric and rubber, the difference in price is a difference in *profit*. They cost less to sell.

Ward's is the Largest Retailer of Tires in the World

Quality equal to the best at a price much lower than even a fairly good tire costs has made Ward's the largest retailers of tires in all the world. We sell 5,000 to 6,000 tires per day. Hundreds of thousands of people use nothing but Riversides. Why not you too? When a Riverside gives you all you can get in any tire, *why pay more?*

Greater Protection Against Skidding

Big heavy blocks of *live* rubber and extra thick side studs and the husky ribs of Riverside Cords grab the slippery roads and are your greatest protection against skidding.

Riverside Cords are thus the safest tire, the most satisfactory tire and the most economical tire you can possibly buy. Why pay more?

For fifty-three years Ward's have sold "Quality" goods only—with a definite "Money Back" guarantee. The reliability of Montgomery Ward & Co. is beyond question. You cannot buy a tire with a better guarantee.

A Riverside Tire put on my Buick one year ago, with Ward's Heavy Duty Tube, still has in it the same air—that's going some!
D. S. Robbins,
Las Cruces, N. Mex.

I bought a Riverside Cord tire a year ago and must say I never took it off the rim yet. Used it every day. All my tires from now on will be Riverside Oversize Cords.
Arthur Mueller,
Jacksonport, Wis.

I have had two Riverside Cords on my car for fifteen months and they are still good. I use this car every day in the year over all kinds of roads. I recommend Riversides to everyone who wants the most for their money.

Feed for Pigs

I have a number of young pigs that are from four to six weeks old. Can such pigs be successfully developed without the use of milk?—H. A. C.

It is not necessary to have milk to grow pigs successfully. There are thousands of pigs developed each year that never receive milk of any kind except the dam's milk during the suckling period.

It is necessary to give your pigs a well balanced ration with plenty of room for exercise. A very desirable combination of feed consists of the following mixture by weight: Corn meal or ground barley, four parts; wheat middlings, three parts, and high-grade digester tankage or fish meal, one part. The mixture may be hand fed or given in a self-feeder.

If any of the pigs are to be retained for breeding purposes they should be hand fed as they will become too fat and not grow out properly when allowed all the feed they will consume. The combination suggested should be fed up to the time when the pigs will weigh about 100 pounds. At this weight the wheat middlings should be gradually eliminated and the amount of corn or barley increased so that when the pigs weigh about 140 pounds they will be receiving a ration consisting of ten parts of corn or barley and one part of tankage or fish meal, which combination should be used up to the time the pigs are marketed.

Rape for Pasture

The cost of producing pork can be materially reduced by providing a supply of pasture during the summer. For mid-summer pasture, Dwarf Essex rape will make excellent pasture. This should be seeded on well prepared ground at the rate of eight pounds per acre. It can be pastured when about eight inches high and will supply excellent forage all summer if it is not pastured too closely.

If the pigs are fed on pasture the grain should be hand fed so the amount allowed daily can be limited and the pigs forced to consume more of the forage crops. By following this method of feeding the rate of gain will not be quite as rapid as when the pigs are given a full allowance of grain, but the cost of producing pork can be reduced from twenty to thirty per cent.—W. H. Tomhave.

Dipping Sheep

I find that my mature sheep and lambs are covered with ticks and lice. What can I do to get rid of them?—R. C .W.

The easiest way to rid the sheep of the ticks and lice is by dipping them twice a year. This should be done while the weather is warmer.

In the spring it should be done after the sheep have been sheared. The dipping will destroy the live parasites but will not destroy the eggs so that it will be necessary to repeat the dipping after ten days or two weeks. In the fall the dipping should be done before cold weather sets in.

Follow Directions Carefully

Home preparations may be used but the best material to use is a standard sheep dip. The directions for using the dip are usually given on the container and should be carefully followed.

The customary method of dipping sheep is to use a tank specially made for this purpose, but it is not necessary to go to this expense for a few head. The solution can be put in a barrel or any tank that may be on the place. The sheep should be dipped so that all parts of the animal are covered with the solution. The dipping will not only destroy the parasites, but will give the skin a healthy condition.—W. H. Tomhave.

One Spot —
Where a De Laval will convince you of what it can do
~*Try One on Your Own Farm*

If you are not already convinced of the superiority of the De Laval Cream Separator, there is a simple and easy way to settle this question to your own satisfaction.

Ask your De Laval Agent to let you try one—he will gladly do so, free of charge. Then use it under your own conditions. You will soon be convinced of its superiority, and know why. Run the skim-milk from your old separator through the new De Laval. You may be surprised at the amount of cream the new De Laval will get from it; and if it does, then trade in your old machine as partial payment.

Riverside Oversize Cord TIRES and TUBES

Quality Equal to the Best at Prices Very Much Lower

Forget that the price is low. Just consider *quality* alone. Compare service and mileage, and you will find that Riverside Tires give you all you get in any tire—give you just as long mileage, just as satisfactory service.

Riverside Tires are *not made to sell at a low price.* They are made *to be as good* as any tire. They cost just as much to make, just as much for fabric and rubber, the difference in price is a difference in *profit.* They cost less to sell.

Ward's is the Largest Retailer of Tires in the World

Quality equal to the best at a price much lower than even a fairly good tire costs has made Ward's the largest retailers of tires in all the world. We sell 5,000 to 6,000 tires per day. Hundreds of thousands of people use nothing but Riversides. Why not you too? When a Riverside gives you all you can get in any tire, *why pay more?*

Greater Protection Against Skidding

Big heavy blocks of *live* rubber and extra thick side studs and the husky ribs of Riverside Cords grab the slippery roads and are your greatest protection against skidding.

Riverside Cords are thus the safest tire, the most satisfactory tire and the most economical tire you can possibly buy. Why pay more?

For fifty-three years Ward's have sold "Quality" goods only—with a definite "Money Back" guarantee. The reliability of Montgomery Ward & Co. is beyond question. You cannot buy a tire with a better guarantee.

A Riverside Tire put on my Buick one year ago, with Ward's Heavy Duty Tube, still has in it the same air—that's going some!
D. S. Robbins, Los Cruces, N. Mex.

I bought a Riverside Cord tire a year ago and must say I never took it off the rim yet. Used it every day. All my tires from now on will be Riverside Oversize Cords.
Arthur Mueller, Jacksonport, Wis.

I have had two Riverside Cords on my car for fifteen months and they are still good. I use this car every day in the year over all kinds of roads. I recommend Riversides to everyone who wants the most for their money.
F. B. Pinnell, Cubo, Mo.

INTENTIONAL 2ND EXPOSURE

OUR YOUNG PEOPLE'S FORUM.

From Forum Friends

Dear Cousin Ruth:—Doesn't this weather seem like spring? The birds are singing all around our house. A robin has built a nest in back of our house in a big pine tree. In the morning when I take food out for the dogs and when I go in for some more the robin chirps and sings in front of our house and eats the crumbs.—Lucille Snyder, Schuylkill County, Pa.

Dear Cousin Ruth and Forum Friends:—I am eleven years old and when school starts again I will be in the sixth grade. I go to the Bingham Centre School. Our school closed the eighth of May.

How many of the girls like to pick flowers? I know I do. I am planting some flower seeds but the pigs and chickens dig them up.—Julia Benkert, Potter County, Pa.

Dear Cousin Ruth and Forum Friends:—Hello, everybody. I don't see why the boys and girls of Sullivan County don't wake up and write. I have often been tempted to write but about the time I would get the pencil and paper there would be something else to do.

I do love birds. There is a robin that built its nest on our back porch and laid two little eggs in it. Yesterday a little wren came and hopped along in the vines and hopped in the nest and picked two little holes in one egg. The wren has built a nest on the same porch. Now what would you do with the naughty little wren?

We milk nine cows. Mother and sister and I do all the milking at night. We had more last summer.

OFF FOR A SPIN
Walter and Bruce Vandine,
Lycoming County, Pa.

Our school was out May fifteenth. I got a book for missing the least days. The name of it is "Ethel Hollister's Second Summer as Camp Fire Girl." I am twelve years old and will be in the eighth grade next year.

My mother has a camera and I am going to learn how to take pictures.—Florence Robe, Sullivan County, Pa.

That's right, Florence, learn to use the camera and you can help make our page better and better.

COUSIN RUTH.

Dear Cousin Ruth:—I have a Collie dog and his name is Lochinvar Bobby. We have lots of fun with him. We throw sticks in the water and he will go get them for us. He will go get the ball for us. Every night we play hide and seek with him. I have a pet cat and his name is Robin.

I am seven and a half years old. I am in the fourth grade and I go to the Howard School. Our school was out the last day of April.—Elinor S. Snyder, Susquehanna County, Pa.

Dear Cousin Ruth and All:—I am twelve and am in the sixth grade. My school is out now. I go to the Eagle Eye School when we have any.

We live on a farm of ninety-five acres. We have a car. How many of you like to take your dinners out on Sundays? I do.

My pets are cats. We have one big cat and two little kittens. A robin has a nest in an apple tree beside our house. I have seven sisters and two brothers.—Katherine Dickson, Clearfield County, Pa.

Dear Cousin Ruth and Forum Friends:—Our school was out April twenty-ninth. There were thirty-eight pupils. The teacher gave us each a souvenir. I passed into seventh grade, and I was eleven in March. I have three sisters, Frances, Melba and Esther. My oldest sister, Frances, is in high school in the freshman class.

For pets we have four cats and two kittens. We have about a hundred chickens. But we don't live on a farm.

Almost all our fruit trees are in blossom. We have quite a few flowers in our yard, but they are not all out. I have a little garden that I raise lettuce and radishes in. In a few weeks we can eat them.

My father works at carpenter work. I am going to take music lessons on the piano this summer.—Doris G. Greene, Susquehanna County, Pa.

Dear Cousin Ruth and Forum Friends:—I am thirteen years of age. I live in the country and go to a country school. When school starts again I will be in the eighth grade. I liked my last teacher very much. I hope she teaches again. I did not miss a day at school this past term.

I raise peepies every year. I have thirty-six this year. My mother has 290. How many of you like to embroider? I am sure I do. I just started this winter and just love to work it. I have made a cushion and am working on a scarf now.

Cousin Ruth, I can send some riddles if you would like. I read all the riddles on the Forum page and try to find the answers but fail quite often.

I have failed to get a picture that is clear enough to send to the Forum. Here is a candy recipe I make real often:

FUDGE CANDY

1 cup of white sugar
1 cup brown sugar
¾ cup rich milk
1 tablespoon of cocoa
1 tablespoon of vanilla

A lump of butter the size of a walnut.

Cook until it forms a ball when dropped in cold water; take off of stove and stir until cool, then add nuts if desired. Pour on buttered plate until cold. Cut in squares.—Gladys Walter, Adams County, Pa.

If you have some riddles that you think are particularly good send them in. I can't use all that come in but I try to use those I think best.

COUSIN RUTH.

My Bird Friends

One bright spring morning I noticed two small birds flitting thru the green trees busily examining the bird houses there and under the porch. I named them Mr. and Mrs. Willie Wren. Not long afterwards I saw the pair busily carrying sticks into a small white house fastened to a porch post. I suppose they knew that the wire netting over part of the entrance was to keep out the cat's paw and large birds and thought this would be the safest of all the houses.

They carried twigs, feathers and horsehairs for a few days, then I noticed that Mrs. Wren did not appear very often. Willie would spend most of his time singing and swinging on the slender branches of a locust tree that was near his home.

One day when I thought both Mr. and Mrs. Wren were away I peeped into the cozy nest and saw three speckled eggs. I had not time to go away before what seemed to me to be two balls of feathers flew at me screaming and ruffling their feathers till they appeared twice as large as usual. I made a very rapid departure and stood in the doorway watching the frightened birds flying in and out of the box until they grew calm.

I had almost forgotten the Wren family when one day I heard a noise in the little house resembling the cries of baby birds. Sure enough, soon Father Wren flew into the nest with a big fat grub and quickly forced it down one of the little yellow mouths that opened when he entered. Next came Mother Wren with some sort of a large bug. They continued this performance for some time.

One day about three weeks after I saw Mr. and Mrs. Wren first carrying bugs and worms I saw my pet cat playing with something out on the lawn. Mr. and Mrs. Wren were screaming and darting furiously down toward the animal. I went to examine its prey and found one of the baby wrens clutched between its paws. I quickly caught the bird in my hands and put it in the nest; its cries were accompanied by the shrill cries of Mr. and Mrs. Wren. The Wren children kept continually falling out of their nests and I putting them in.

At last I decided that they wanted to learn to fly. I let them be and in a week the young wrens were flyin thru the air and singing. Mr. an Mrs. Wren had another lot of children reared.—Helen Stephens, Perr County, Pa.

> I enjoyed some of the bird contest letters which didn't appear on the page May 16 so much that I'm going to let you have a chance to enjoy them, too. This week I've selected a letter that tells about a wren family. Other letters will be published later.

MAE LUMADUE
Pennsylvania.

Dear Cousin Ruth and Foru Friends:—I was delighted to see m name in the paper.

We are having a lot of fun i school. Today one of my classmat found two little baby robins openin their mouths for food. She brough them to school and we put them i a box. We had fun digging for worm for the babies. I dug out a lot o worms and put them on a piece o tin and said to the birds, "Here it i already, served on a tray." Th teacher laughed at that. My frien took the birds to her home becaus the birds were found on the ground in the grass. Every noon we go into the woods and eat our lunch becaus we like to hear the birds sing.—Veronica Zineski, Suffolk County, N. Y.

Riddle Answers

1. A pack of cards.
2. Stone
3. Time for the clock to be fixed.
4. What goes in it.
5. To get on the other side.

Riddles contributed by Helen Basehore, Dauphin County, Pa., published May nine.

* * *

1. Against his will.
2. When they beat eggs and whi cream.
3. Certainly, in dew time.
4. Get up a tree and make noise like a nut.

Riddles contributed by Andrew M. Doherty, Wayne County, Pa., published May nine.

* * *

1. He has been to sea (see).
2. She makes the butterfly.
3. A step-father (farther).
4. A ditch.
5. It comes before T (tea).

OUR LITTLE FOLKS' PUZZLE CORNER

Dear Little Folks:—Five of our boys must have taken a trip to the circus lately. I don't know just how they got in, whether they went with Dad or worked their way,—maybe carrying water or helping the peanut man. At any rate you will be able to find their names, if you look carefully under the letters in the six lines in the picture. You will see that under certain letters little marks appear; there are five kinds of marks, one sign for each boy. Begin with the first line and choose a letter with a mark under it; go on down thru the six lines, and you will have the letters which spell a boy's name. Do this until you have all five boys' names.

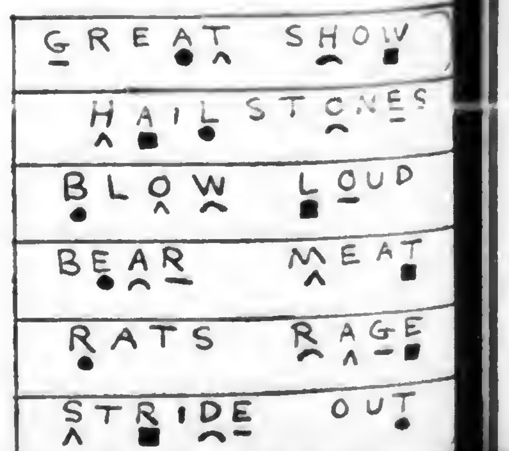
When you have the answer to this puzzle send it to me on a POSTAL CARD so that it reaches me by June 13. The ten children, sending in the correct answer, whose cards are the best in grammar, spelling, punctuation, penmanship and general appearance, will each be awarded a prize. I'm not saying yet what the prize will be, but I hope the winners will like it. Address all replies to the PUZZLE EDITOR, PENNSYLVANIA FARMER, 261 SOUTH THIRD STREET, PHILADELPHIA.

Puzzle Prize Winners

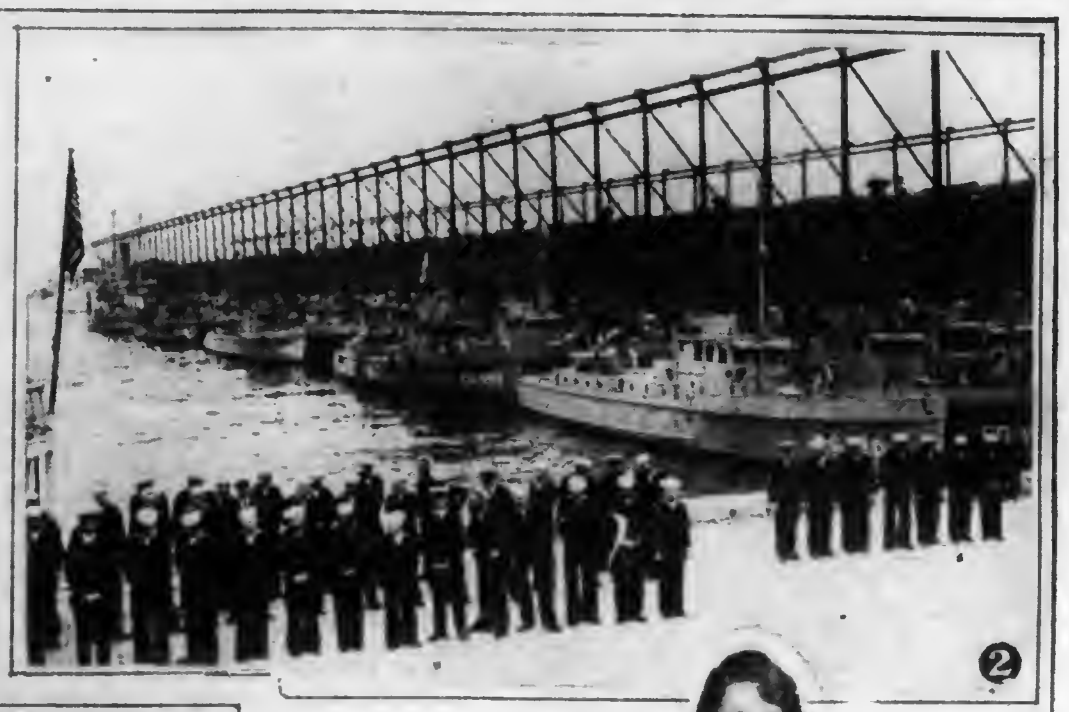
The answer to the puzzle published in May 16 issue of Pennsylvania Farmer is: (first row) 2, 7, 6; (second row) 9, 5, 1 (third row) 4, 3, 8.

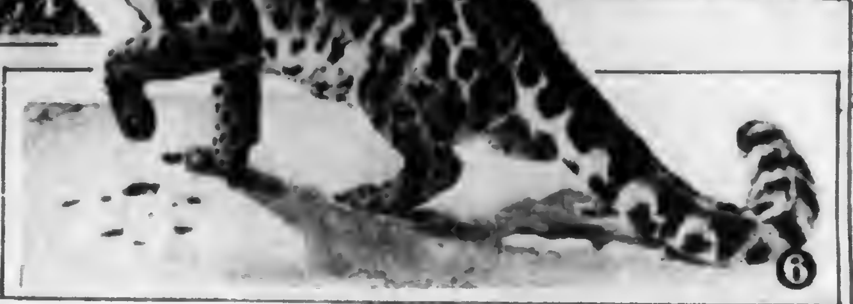
The prize winners are: Mildred Brach bill, age 8, Paradise, Pa.; Helen E. Henr age 11, Delta, Pa.; Miriam Hess, age 1 Berwick, Pa.; Frank Hower, age 10, Danville, Pa.; Alfred Hunter, age 11, Northampton, Pa.; James Willis Martin, Jr age 8, Washington, Pa.; Charles S. Pug age 9, Oxford, Pa.; George D. Solt, ag 12, Northampton, Pa.; Vernn G. Stamme age 8, Boiling Springs, Pa.; Dorothy Va Doren, age 8, Ringoes, N. J.

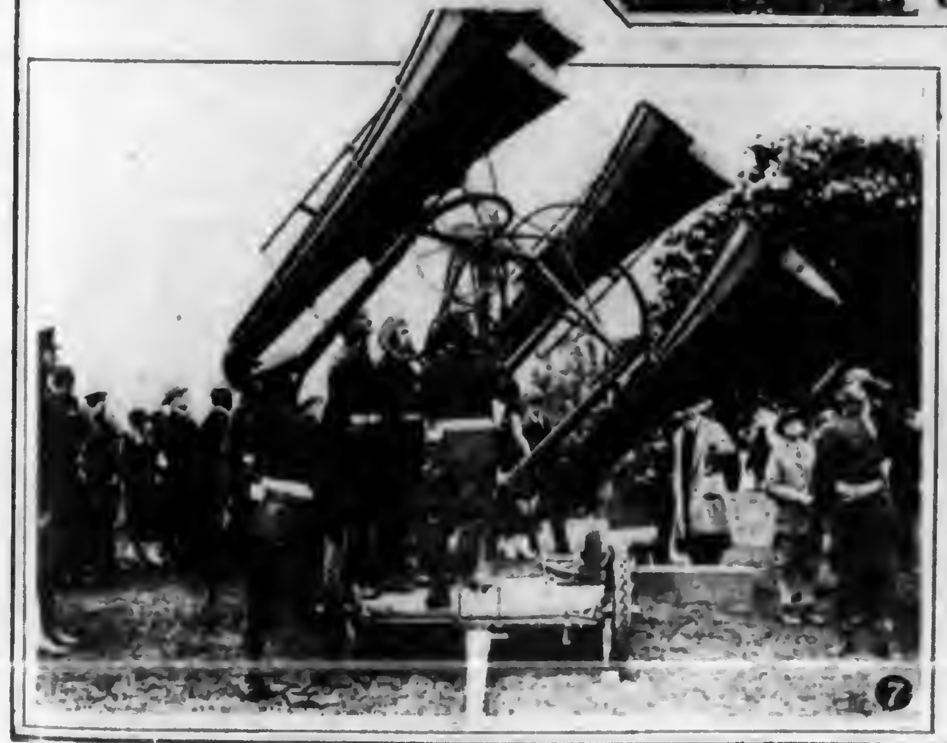
The prize was a silk American flag.



PASSING EVENTS IN PICTURES







(Copyright by Underwood & Underwood)

1.—Solicitor General Beck and his granddaughter, Miss Nina Beck.
2.—Blue-jackets and the picket boats they man—part of Uncle Sam's dry fleet, ready to leave Staten Island to blockade rum row.
3.—Miss Anna Li, of Pekin, China, who is in Chicago studying Red Cross work. She will return to her native land to spread the gospel of sanitation in the Far East.
4.—The crowd which greeted England's King as he passed the Arc de Triomphe, in Paris, to lay a wreath on the tomb of France's Unknown Warrior.
5.—Sunny Monday, and all serene in her flowered apron!
6.—A fine example of the snow leopard, one of the animals the Roosevelt brothers will hunt while exploring central Asia.
7.—An "airplane detector" which "picks up" the presence of planes and their altitude, part of the defence of Fort Totten, N. Y.
8.—An automatic plow—it consists of a two-wheel tractor of four H. P. and single cylinder engine to furnish power. All the farmer has to do is to keep it supplied with gasoline and wind it up.

They Like the Community

Why Young People Think It a Good Place to Live

FOR a small one, my community has done a great deal to amuse and interest its young people. The community work began when a number of our townsmen converted an old disused church into an attractive community hall. The small amount of money needed was easily raised by subscription. When the hall was completed, it was opened for parties, plays and other forms of amusement.

During the winter, community sings are held every two weeks. Committees are appointed to provide programs and games. The young folks like being on the committee and preparing a surprise program for each "sing." Often our district school teacher helps, and has her children give short plays, dialogues, piano solos, pantomimes and other stunts that suggest themselves.

Debates Form a Prominent Feature

Debates were instituted by some of our older citizens. Soon the younger people showed their interest and desire to share in this instructive form of entertainment. A debating club was formed accordingly, and nearly all the young people joined. With a little help now and then from the older members, they gave some very worth-while debates. The subjects at first were on current farm questions.

Our first debate was, "Resolved that it is profitable for the present-day farmer to equip with modern machinery." The debate centered on the tractor problem. Excellent points were brought out on both sides, and many a farmer confessed that it was the first time he had given such points serious thought.

After a time almost any topic of general interest found a responsive audience. Mock trials proved both successful and instructive.

Prize Corn Wins Prize Pigs

Two years ago one of our public-spirited citizens originated "Corn Day." Each spring he gives tested seed corn to the boys in each district of his town. The corn must be planted and taken care of by the school boys themselves. Each fall the corn day festival is held in our community hall. Parents, teachers and pupils are all in attendance.

To the boy exhibiting the best ear of corn (grown from the seed given him) goes a registered pig as a prize. Other citizens, seeing the value of such a day to their young folks, have offered various prizes. So now the girls may receive prizes for fancy work, baking, sewing and other simillar lines.

These, and many other such events and entertainments, are making our community a live and desirable place for its young citizens.—P. M. W.

The Truths of Life

SPRING and summer present to parents the greatest opportunities to teach lessons of life to their children. With the unfolding of new life all about him, what child is not full of questions which we grown-ups find it difficult to answer? Let it not be said of us that we deliberately lied to the child when in all good faith and innocence he came with his questions about the origin of life. And to "cleverly" dodge the issue and evade his questioning is no better.

If he cannot have his questions answered by mother or father, rest assured he will get information in some other way. Whose fault is it if he learns to distrust parents?

A Very Good Book

I wish every parent and every adolescent,—especially every adolescent girl—would read "The Three Weavers," by Annie Fellows Johnston.

Many mothers say, "I want to guide my child, but do not know how to answer his questions." No one can foresee just what form the questions will take. Probably no two children question in exactly the same words. But if we make ourselves familiar with the processes of nature, we shall have at hand a store of information, —the seed, the plant, the flower, and then the seed again. None of these "just happen."

Thank God for the noble women doctors who have met these problems with their own children, and can teach us how to present the subject in its beauty and chastity!—M.H.H.

The Clothes Problem

IN A paper of recent date I saw pictures of two dresses. The first was made on the long, slim lines of the present,—a product of the prevailing styles,—and was marked $100. The second was the product of a decade ago, and was labeled $15. "He who runs may read." If we are in style we must pay the price. Of course every woman wants to be stylishly dressed, and it is right that she should. But not every family purse can stand the strain.

If a man buys a suit of clothes of good material, he can wear it until it begins to look shabby, and it is appropriate for almost any occasion; but a woman rarely wears her gowns out before they are out of date. Again, various occasions call for different styles of dress. Hence we see why women's clothes cost so much more than men's.

Some Have Solved the Problem

Many women of moderate means seem to have solved the clothes problem, for they are always stylishly and appropriately dressed. The principal reasons are that they are conservative in their styles and buy after the height of the season so that they can be well dressed on half the amount required when the new styles first came out.

The ability to make your clothes reduces expenses by half. Even after the first making and wear, clothes may be made over and combined with other material profitably if you are able to do it yourself.

Wisdom in the selection of material is another item. It pays to buy good material, and it pays to buy substantial material. If you are to have only one new gown in the season, let it be of good wearing quality, of a conservative color, and simply made. The sheer goods and lighter shades soon lose their freshness with constant wear.

A Stitch Often Saves the Garment

Last, but not least, the cost of dressing depends very largely on the care taken of clothes. Those kept in repair, brushed and pressed, have an added lease of life and look fifty per cent better. "A stitch in time saves nine," and often saves the garment also. A neglected button on a coat is often lost, and the inability to procure one like it makes it necessary to buy new ones for the entire coat. A break in the warp soon becomes a rent, and a broken buttonhole soon becomes frayed.—Mrs.G.G.

Who's Who in Our Family

Two More Regular Contributors Greet You

ONE does not have to be long in the presence of Mrs. Shuman to feel the charm of her personality. Keen of mind, well educated, with varied interests in the outside world, she is alert to all the worth while things of life.

Mary Stewart Gallaher (later Shuman) was born on a farm at Antes Forte, Pennsylvania, where she lived the usual life of a farm girl. Her talent for music, however, convinced her parents that she should have a musical career. She enrolled in Dickinson Seminary, expecting to teach after graduation. Sickness prevented completion of the course, but Mrs. Shuman has always kept up her practice. It is a treat to hear the fine music with which she entertains her guests.

Mr. and Mrs. Lloyd Shuman

On March 2, 1897, Mary Gallaher married Lloyd Shuman, of Greendale Farm, Thompsontown, Pennsylvania, and has ably filled the position of farmer's wife. Her purebred Rhode Island Reds are the pride of her life, and her vegetable garden is of much interest to her. She believes growing a variety of vegetables f health's sake, and says that one is always to raise one hundred of lima beans each year, along the other good things of the garden.

A large farmhouse requires help, and the fact that Mrs. Shuman's two helpers have stayed with her for ten and fourteen years speak well for the mistress of Greendal Farm.

One can scarcely believe that energetic woman is a grandmoth but she is, and proudly shows p tures of the two grandchildren who like their father, were born Greendale.

A Few of the Outside Interests

Mrs. Shuman tells with pride the splendid Ladies' Aid to which she belongs and the fine work it accomplishes. The D. A. R. takes frequently into the outside wor and she often fills orders for look up the ancestry for family trees. few years ago Mrs. Shuman, at meeting in Washington, D. C., pre sented the oldest record of deeds some Pennsylvania land. She served on the forestry commission Pennsylvania. She is a regular con tributor to Pennsylvania Farmer other farm papers. — A Fellow worker.

Mrs. L. K. Crowell

I WAS born on a farm in Cortl County, N. Y., in 1886. I a tended district school, and later Cort land Norm School until I married.

With the exc tion of the year, I have li on a farm since my ma riage. I have d all kinds of w indoors and out. I have raised kinds of poultry and also rabb

We have three girls aged six thirteen and ten. We are paying a hill farm without rural deli or telephone, and with conditi and prices as they are, we find strenuous enough.

Besides the regular farming raise vegetables and poultry for ket.—Mrs. L. K. Crowell.

Prevent Accidents

AFTER hearing of several pain accidents from broken gl knives, needles and the like whi had been carelessly left lying ab I resolved to have a place for all things.

In the sewing room I keep a cigar box having a well-fitting co Into this go broken needles, be pins and shattered light bulbs. the basement we have a strong, ti barrel in which we invariably pl broken glass or knives, sharp tin other metal, and rusty nails. Whe necessary this is taken away an emptied in a safe place where it wi be neither a menace nor an eyesor

Tin cans that have contained mea fish or any substance tempting hungry cats are hammered togeth so that no little animal can force head into the can in search of foo An old hammer is kept beside t trash barrel and it requires only blow or two to press down the t of the can.—Alice Margaret Ashton

Turning Talents into Dollars

Book That Every Housewife Will Find Helpful

COOKING FOR PROFIT by Alice Bradley, Principal of Miss Farmer's School of Cookery, Boston; Culinary Editor "Woman's Home Companion" etc., published by the American School of Home Economics, Chicago, Ill.

A talent for cooking cannot stay dden. Whether it is the church pper or Grange supper, a children's rty, a woman's exchange, or your roadside stand, wherever those lectable cakes or jellies of yours pear, they will be "advertised by ur loving friends."

It is another matter to make the lent profitable financially. For ry woman who struggles to suc thru her own efforts alone, there e ten who give up discouraged be nse they have not known how to timate what they ought to charge r their products.

What Is Necessary for Success

Miss Bradley's book gives an al ring list of profitable openings for od cooks, and then straightway ings us to earth by reminding us of e qualifications necessary for suc These qualifications include: ining, experience, confidence, h standards, honesty, ideals, love the work, far-sightedness, pro ssiveness, executive ability, intel ence in purchasing, ability to use e, energy and materials to the advantage, ability to handle ney wisely, ability to keep simple ounts, good judgment, adaptabil tact, skill in dealing with emer cies, sympathy and consideration for employes, service as a standard, concentration, pleasing personality, neatness and cleanliness, good health with a determination to maintain it.

Miss Bradley explains how to develop a specialty, how to market it, how to establish a reputation, how to figure cost.

"Learn," she says, "the number of sandwiches you should get from one loaf of bread, one pound of butter, one pound of cheese, one ham (best part slices, poorer pieces chopped), one roast of beef,—the face of the rump will do very nicely, one fowl, one head of lettuce, one dozen eggs."

Everything Considered

Again, "When seventy pounds of fudge a day are made and sold for eighty-five cents a pound at an apparent profit of $41, it looks like a lot of money. If two people spent all day making it, and another day packing, and someone else is spending two days taking orders and delivering the candy, the $41 divided by six day's work means $6.83 per day per person, and a good wage."

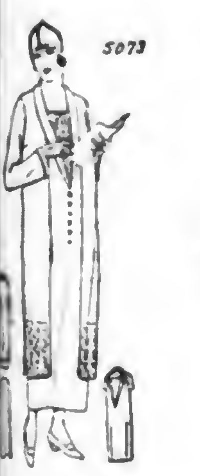
The book gives standard recipes for a large variety of salable articles, suggests menus for many different occasions, and lets us into the secret of what it costs to run a hotel, how to cater for weddings and afternoon teas, and what we should charge for canned foods, preserves, etc., for private trade.

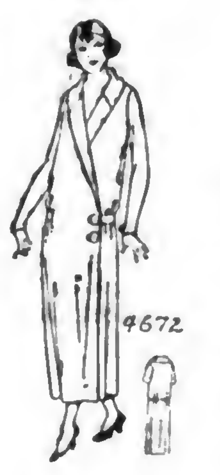
The book forms a correspondence course, and contains lists of questions to be answered, at the end of each chapter.—I. S. H.

To Meet Needs of Every Day

Directions for Ordering.—Give figures d letters of each pattern exactly as ated at beginning of each description. e bust measures when ordering waist tterns, waist measure for skirt, and e for children's patterns. Address ennsylvania Farmer, 261 S. Third reet, Philadelphia, Pa.

73.—An Ensemble Style for Stout ures.—Bengaline or kasha would be d for this design. It consists of a one e straightline dress that may be finish with short or long sleeves and a tunic open fronts. The tunic may be omit or finished separate from the dress. ven sizes: 40, 42, 44, 46, 48, 50 and 52 es bust measure. The width at the of the dress is 1⅝ yard. To make stylish model for a 40-inch size will ire 5 yards of 54-inch material if e with long sleeves. To make with sleeves will require 4¾ yards. The alone without sleeves requires 1½ Pattern, 10 cents.





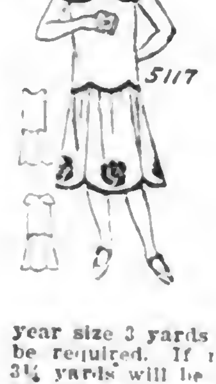
—A Comfortable Dress.—Linen, gingham, serge or chambray would good for this model. The closing is rsible, so that the dress may be worn ned from right to left or left to t side.

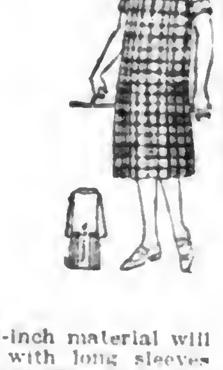
ven sizes: 34, 36, 38, 40, 42, 44 and 46 es bust measure. A 38-inch size re es 4½ yards of 36-inch material. The h at the foot is 1⅞ yard. Pattern, 10 s.

—A Pretty Party Frock.—Crepe or on embroidered with floss or chenille, taffeta or chiffon with bead or other oidery would be attractive for this n. It is also good for crepe de chine ribbon binding.

ur sizes: 8, 10, 12 and 14 years. A ar size requires 3¼ yards of 36-inch material if made with the bertha. Without the bertha 3 yards will be required. Pattern, 10 cents.

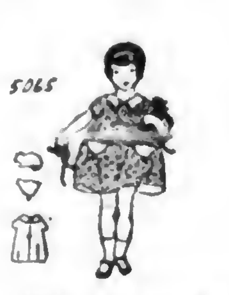
1998.—A Simple Frock.—This style is good for gingham and other wash fabrics. Four sizes: 8, 10, 12 and 14 years. If made as illustrated in the large view for a 10-year size 3 yards of 36-inch material will be required. If made with long sleeves 3¼ yards will be required. For the collar of contrasting material one-quarter yard is required. Pattern, 10 cents.

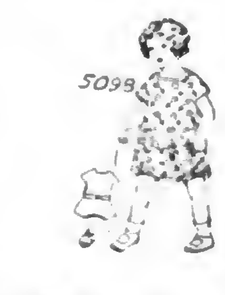




5065.—A Neat Apron Frock.—Green and white printed voile with trimming of white lawn is here depicted. This model is also attractive in chambray, linen, pongee and gingham.

Five sizes: 1, 2, 3, 4 and 5 years. To make the frock as illustrated for a four-year size will require 1⅞ yard of 27-inch figured material and one-quarter yard of plain material. One may have either pocket, the chick, or the kitten. Pattern, 10 cents.





5098.—Romper Model.—Figured cretonne or other printed materials may be used for this style. It is a very comfortable model for very young children. Three sizes: 1, 2 and 3 years. A 2-year size requires 1¾ yard of 32-inch material. Pattern, 10 cents.

Send 10c in silver or stamps for our up-to-date spring and summer 1925 Book of Fashions.

This cut-away view of the Florence burner shows how the heat is focused on the cooking.

Canning in comfort *with Focused Heat*

THE time for canning and preserving was once a time to dread. Now it can be a day of real interest and pleasure—if you use the Florence Oil Range. For the Florence is the oil range with *focused heat.*

This means that the heat goes directly where it will do the most good, the bottom of the pot. And there it stays—concentrated and intense, sending its energy straight into the cooking and not out into the kitchen.

For cold-pack canning, for sterilizing jars, for gentle cooking you can adjust the heat to any degree you need, by the simple turn of a lever.

Heat only when you need it

All your fruit, vegetables, and ingredients for relishes can be peeled, cut and chopped in a perfectly cool kitchen. Then, when everything is ready, turn a lever and light the Florence burners. The Florence burns a gas-like flame from the vapor of kerosene. It is not a wick flame, such as you see in an ordinary oil lamp. As soon as the cooking is complete, turn out the flame. For the Florence burns only when you are actually cooking, and burns one of the cheapest of fuels. There are no wicks to trim, and no smell or smoke to annoy you.

It is the joy of every woman to have her kitchen well equipped and good to look at. In the Florence Oil Range she has a stove that will add to the attractiveness of the most modern and carefully designed kitchen.

The ingenious Florence Leveler attached to the legs of the stove keeps it level on an uneven floor. And there are many other refinements that will be appreciated by a woman who knows the best.

Go to the nearest department, furniture, or hardware store and you will be convinced that this is exactly the stove you have been wishing for.

Continued

THE time appointed for the convention in Baltimore drew near. The Senator received an intimation that he would be put in nomination if Van Buren failed. Immediately he wrote to Judge Fine, of Ogdensburg, chairman of the delegation from the northern district of New York, forbidding such use of his name on the ground that his acquiescence would involve disloyalty to his friend the Ex-president.

He gave me leave to go to the convention on my way home to meet Sally. I had confided to Mrs. Wright the details of my little love affair—I had to—and she had shown a tender, sympathetic interest in the story.

The Senator had said to me one day with a gentle smile:

"Bart, you have business in Canton, I believe, with which trifling matters like the choice of a president and the Mexican question can not be permitted to interfere. You must take time to spend a day or two at the convention in Baltimore on your way. . . . Report to our friend Fine, who will look after your comfort there. The experience ought to be useful to a young man who, I hope, will have work to do in future conventions."

I took the stage to Baltimore next day—the twenty-sixth of May. The convention thrilled me—the flags, the great crowd, the bands, the songs, the speeches, the cheering—I see and hear it all in my talk. The uproar lasted for twenty minutes when Van Buren's name was put in nomination.

Then the undercurrent! The slave interest of the South was against him as Wright had foreseen. The deep current of its power had undermined certain of the northern and western delegations. Ostensibly for Van Buren and stubbornly casting their ballots for him, they had voted for the two-thirds rule, which had accomplished his defeat before the balloting began. It continued for two days without a choice. The enemy stood firm. After adjournment that evening many of the Van Buren delegates were summoned to a conference. I attended it with Judge Fine.

The Ex-president had withdrawn and requested his friends in the convention to vote for Silas Wright. My emotions can be more readily imagined than described when I heard the shouts of enthusiasm which greeted my friend's name. Tears began to roll down my cheeks. Judge Fine lifted his hand. When order was at last restored he began:

"Gentlemen, as a friend of the learned Senator and as a resident of the county which is the proud possessor of his home, your enthusiasm has a welcome sound to me; but I happen to know that Senator Wright will not allow his name to go before the convention."

He read the letter of which I knew.

Mr. Benjamin F. Butler then said:

"When that letter was written Senator Wright was not aware that Mr. Van Buren's nomination could not be accomplished, nor was he aware that his own nomination would be the almost unanimous wish of this convention. I have talked with the leading delegates from Missouri and Virginia today. They say that he can be nominated by acclamation. Is it possible that he—a strong party man—can resist this unanimous call of the party with whose help he has won immortal fame? No, it is not so. It can not be so. We must dispatch a messenger to him by horse at once who shall take to him from his friend Judge Fine a frank statement of the imperious demand of this convention and a request that he telegraph a withdrawal of his letter in the morning."

The suggestion was unanimously approved and within an hour, mounted on one of the best horses in Maryland—so his groom informed me—I was on my way to Washington with the message of Judge Fine in my pocket. Yes, I had two days to spare on my schedule of travel and reckoned that, by returning to Baltimore next day I should reach Canton in good time.

It was the kind of thing that only a lithe, supple, strong-hearted lad as I was in the days of my youth, could relish—speeding over a dark road by the light of the stars and a half-moon, with a horse that loved to kick up a wind. My brain was in a fever, for the notion had come to me that I was making history.

THE lure of fame and high place hurried me. With the Senator in the presidential chair I should be well started in the highway of great success. Then Mr. H. Dunkelberg might think me better than the legacy of Benjamin Grimshaw. A relay awaited me twenty-three miles down the road.

Well, I reached Washington very soon after daybreak. I was trembling with excitement when I put my horse in the stable and rang the bell at our door. It seemed to me that I was crossing the divide between big and little things. A few steps more and I should be looking down into the great valley of the future. Yet, now that I was there, I began to lose confidence.

The butler opened the door.

Yes, the Senator was up and had just returned from a walk and was in his study. I found him there.

"Well, Bart, how does this happen?" he asked.

"It's important business," I said, as I presented the letter.

Something in his look and manner as he calmly adjusted his glasses and read the letter of Judge Fine brought the blood to my face. It seemed to puncture my balloon, so to speak, and I was falling toward the earth and so swiftly my head swam. He laid the letter on his desk and, without looking up and as coolly as if he were asking for the change of a dollar, queried:

"Well, Bart, what do you think we had better do about it?"

"I—I was hoping—you—you would take it," I stammered.

"That's because the excitement of the convention is on you," he answered. "Let us look at the compass. They have refused to nominate Mr. Van Buren because he is opposed to the annexation of Texas. On that subject the will of the convention is now clear. It is possible that they would nominate me. We don't know about that, we never shall know. If they did, and I accepted, what would be expected of me is also clear. They would expect me to abandon my principles and that course of conduct which I conceive to be best for the country. Therefore I should have to accept it under false pretenses and take their yoke upon me. Would you think the needle pointed that way?"

"No," I answered.

IMMEDIATELY he turned to his desk and wrote the telegram which fixed his place in history. It said no.

Into the lives of few men has such a moment fallen. I am sure the Lord God must have thought it worth a thousand years of the world's toil. It was that moment in the life of a great leader when Satan shows him the kingdoms of the earth and their glory. I looked at him with a feeling of awe. What sublime calmness and serenity was in his face! As if it were a mere detail in the work of the day, and without a moment's faltering, he had declined a crown, for he would surely have been nominated and elected. He rose and stood looking out of the open window. Always I think of him standing there with the morning sunlight falling upon his face and shoulders. He had observed my emotion and I think it had touched him a little. There was a moment of silence. A curious illusion came to me then, for it seemed as if I heard the sound of distant music. Looking thoughtfully out of the window he asked:

"Bart, do you know when our first fathers turned out of the trail of the beast and found the long road of humanity? I think it was when they discovered the compass in their hearts."

So now at last we have come to that high and lonely place, where we may look back upon the toilsome, adventurous way we have traveled with the aid of the candle and the compass. Now let us stop a moment to rest and to think. How sweet the air is here! The night is falling. I see the stars in the sky. Just below me is the valley of Eternal Silence. You will understand my haste now. I have sought only to do justice to my friend and to give my country a name, long neglected, but equal in glory to those of Washington and Lincoln.

Come, let us take one last look together down the road we have traveled, now dim in the evening shadows. Scattered along it are the little houses of the poor of which I have written. See the lights in the windows—the lights that are shining into the souls of the young—the eager, open expectant, welcoming souls of the young!—and the light carries many things, but best of all a respect for the old, unchanging ways of the compass. After all that is the end and aim of the whole matter—believe me.

MY LIFE has lengthened into these days when most of our tasks are mechanically accomplished. We try to make men by the thousand in vast educational machines, and no longer by the one as of old. It was the loving, forgiving, forbearing, patient, ceaseless toil of mother and father on the tender soul of childhood, which quickened that inextinguishable sense of responsibility to God and man in these people whom I now leave to the judgment of my countrymen.

I have lived to see the ancient plan of kingcraft, for self-protection, coming back into the world. It demands that the will and consicence of every individual shall be regulated and controlled by some conceited prince, backed by an army. It can not fail. I foresee, to accomplish such devastation in the human spirit as shall imperil the dearest possession of man.

If one is to follow the compass he can have but one king—his God.

I am near the end. I rode back to Baltimore that forenoon. They had nominated Mr. Polk, of Tennesse, for president and Silas Wright for vice-president, the latter by acclamation. I knew that Wright would decline the honor, as he did.

I hurried northward to keep my appointment with Sally. The boats were slowed by fog. At Albany I was a day behind in my schedule. I should have only an hour's leeway if the boats on the upper lakes and the stage from Plattsburg were on time. I feared to trust them. So I caught the west-bound train and reached Utica three hours late. There I bought a good horse and his saddle and bridle and hurried up the north road. When he was near spent I traded him for a well-knit Morgan mare up in the little village of Sandy Creek. Oh, I knew a good horse as well as the next man and a better one than she I never owned—never. I was back in my saddle at six in the afternoon and stopped for feed and an hour's rest at nine and rode on thru the night. I reached the hamlet of Richville soon after daybreak and put out for a rest of two hours. I could take it easy then. At seven o'clock the mare and I started again, well fed and eager to go on.

It was a summer morning that shortens the road—even that of the young lover. Its air was sweet with the breath of the meadows. The daisies and the clover and the cornflowers and the wild roses seemed to be waving a welcome to me and the thorn trees—shapely ornament of my native hills—were in blossom. A cloud of pigeons swept across the blue deep above my head. The great choir of the fields sang to me—bobolinks, song sparrows, meadowlarks, bluebirds, warblers, wrens, and far away in the edge of a spruce thicket I heard the flute of the white-throated sparrow.

When, years later, I heard the wedding march in Lohengrin I knew where Wagner had got his theme.

I bathed at a brook in the woods and put on a clean silk shirt and tie out of my saddlebags. I rode slowly then to the edge of the village of Canton and turned at the bridge and took the river road, altho I had time to spare. How my heart was beating as I neared the familiar scene! The river slowed its pace there, like a discerning traveler, to enjoy the beauty of its shores. Smooth and silent was the water and in it were the blue of the sky and the feathery shadowspires of cedar and tamarack and the reflected blossoms of iris and meadow rue. It was a lovely scene.

There was the pine, but where was my lady? I dismounted and tied my mare and looked at my watch. It lacked twenty minutes of eleven. She would come—I had no doubt of it. I washed my hands and face and neck in the cool water. Suddenly I heard a voice I knew singing: Barney Leave the Girls Alone. I turned and saw—your mother, my son. (These last lines were dictated to his son.) She was in the stern of a birch canoe, all dressed in white with roses in her hair. I raised my hat and she threw a kiss at me. Old Kate sat in the bow waving her handkerchief. They stopped and Sally asked in a tone of playful seriousness:

"Young man, why have you come here?"

"To get you," I answered.

"What do you want of me?" She was looking at her face in the water.

"I want to marry you," I answered bravely.

"Then you may help me ashore if you please. I am in my best, white slippers and you are to be very careful."

Beautiful! She was the spirit of the fields of June then and always.

I helped her ashore and held her in my arms and, you know, the lips have a way of speaking then in the old, convincing, final argument of love. They left no doubt in our hearts, my son.

"When do you wish to marry me?" she whispered.

"As soon as possible, but my pay is only about sixty dollars a month now."

"We shall make it do," she answered. "My mother and father and your aunt and uncle and the Hacketts and the minister and a number of our friends are coming in a fleet of boats."

"We are prepared either for a picnic or a wedding," was the whisper of Kate.

"Let's make it both," I proposed to Sally.

"Surely there couldn't be a better place than here under the big pine—it's so smooth and soft and shady," said she.

"Nor could there be a better day or better company," I urged, for I was not sure that she would agree.

The boats came along. Sally and I waved a welcome from the bank and she merrily proclaimed:

"It's to be a wedding."

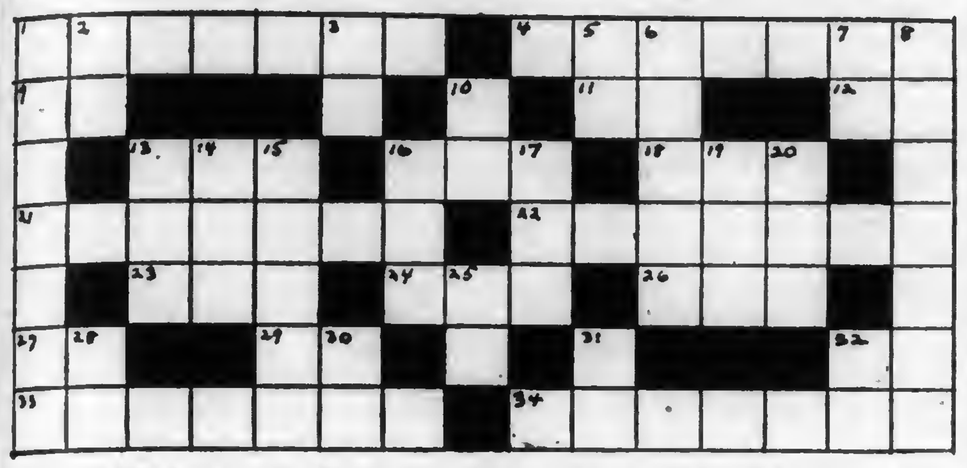
Our Weekly Cross Word Puzzle



TO SOLVE this puzzle, fill in the white squares with letters forming the words defined in the list below. For example: 33 (across) is TABARET and 8 (down) is STUDIED. You may begin anywhere in the puzzle. Follow the definitions carefully and, by noting letters common to two words, you will soon have a clew to help you. The solution of this puzzle will appear in an early issue.

READING DOWN

1. A declaration of opinion against something
2. Belonging to
3. The state for which a famous breed of chickens is named, abbreviation
5. Exists
6. To acquire skill, information or knowledge
7. War office, abbreviation
8. Premeditated
10. A division of a state, abbreviation
13. To strike or touch lightly
14. To be indebted
15. Having greater age
15. A married woman's title, abbreviation
17. A soft mass of flexible material
19. Receptacle for corn, coal, etc.
20. Mrs. Adam
25. Preposition
28. A man who looks after agricultural interests in your county, abbreviation
30. Letters standing for "that is"
31. Alongside
32. A note in the scale

READING ACROSS

1. Earthenware
4. A kind of tree which often grows along streams, plural
9. Republic of France, abbreviation
11. One direction in which the streets of Washington run, abbreviation
12. One of the main divisions of the Bible, abbreviation
13. Mrs. Deer
16. To cut down, with a scythe
18. Lincoln's nickname
21. A fishing vessel
22. Reached destination
23. An article of furniture
24. Turf
26. A point of the compass, abbreviation
27. The highest court of law in the United States, abbreviation
29. East Indies, abbreviation
32. A New England state, abbreviation
33. Small stand used for holding a plant
34. A tomb of a ruler of ancient Egypt

Every "Z" Engine Connecting Rod will stand this test

Twisted around three times but it didn't break!

When you invest in an engine you have a right to expect many years of satisfactory service. But it all depends on how the engine is built.

The "Z" Engine is world famous. It has a reputation for dependability, not by mere chance, but because it is built with the same care and precision as the parts in your automobile. Many Fairbanks-Morse Engines have now been in use for over twenty-five years.

The "Z" Engine has fewer parts subject to wear, and those parts are carefully made, are drop forged and specially heat treated. The connecting rod, for instance, is a drop forging instead of an ordinary malleable. Very finest quality, even in the smallest parts, is the outstanding reason for "Z" long life and dependability, as over 400,000 users will tell you.

Yet the prices are unusually low because our large production has reduced manufacturing costs to a minimum.

Write for free literature

"Z" Engines are built in sizes up to 20 h. p. Get our latest literature and see which size will best fit your requirements.

Prices

2 h. p. battery equipt $48.50
2 h. p. magneto equipt 58.50
3 h. p. magneto equipt 98.50
6 h. p. magneto equipt 153.50

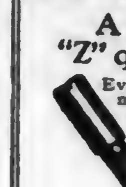
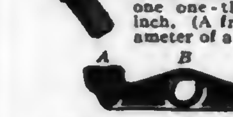
FAIRBANKS, MORSE & CO.
Manufacturers Chicago, U. S. A.
Branches and service stations covering every state in the Union

The Fairbanks-Morse line also includes Home Water Plants, Home Light and Power Plants, Steel Eclipse Windmills, Feed Grinders, washing machines, electric motors, general service pumping equipment, pumpjacks, power heads, etc.

A few examples of "Z" quality construction



Even this small exhaust roller pin is made from cold rolled steel and case hardened to resist wear. It receives two heat treatments and is machined to a limit of one one-thousandth of an inch. (A fraction of the diameter of a human hair.)



The exhaust valve rocker arm is a drop forging. Points "A," "B" and "C" must resist wear and should be very hard. These points are heat treated to file hardness. The balance of the metal is toughened so it will resist strains without breaking.

This governor lever is also a drop forging. Point "A" is constantly subject to wear and is therefore made extremely hard by a series of three heat treatments. The balance of the piece is so tough that it can be twisted into a knot without breaking.

Hitch Your Tractor to the FARQUHAR "Junior Thresher" And Thresh 50 Bushels per hour

Individual or group threshing is profitable because it permits earlier threshing, requires less labor, and you use your own tractor for power.

The Farquhar "Junior" has a capacity of about 50 bushels per hour of average wheat. It does a nice clean job of threshing any kind or cond'tion of grain. It saves the grain and cleans it ready for market. The Fordson has ample power to drive the Farquhar "Junior."

If you have not yet received our 1925 announcement, write us at once.

Fruits—Apples, 20@25c ¼ pk; cantaloupes, 35c ea; cherries, 60@70c lb; strawberries, 25@40c qt.

Grains (prices paid to farmers)—Wheat $1.70; corn, $1.25; hay, baled, timothy, $13@15; straw, $12@13.

Feeds (selling prices)—Bran, $40@41 ton; shorts, $42.50@43.50; hominy, $50@51; middlings, $46@47; linseed, $54@55; gluten, $45@46; ground oats, $43@44; cottonseed, 41 per cent protein, $52@53; dairy feeds, 16 per cent, $39@40; 18 per cent, $43.50@44.50; 20 per cent, $45.50@46.50; 24 per cent, $50@51; 25 per cent, $52@53; horse feed, 85 per cent, $50@51.

LIVESTOCK

Review at local yards for week ending May 29, 1925: Trading more active. Beef steers, compared with week ago, fully steady, stronger undertone on good and choice grades; top, $9.65; average weight 1160 lbs; bulk of sales, $8.50@9.25. Bulls and heifers steady. Cows fairly active, steady, bulk, $5.50@6.50. Canners and cutters about steady. Calves slow, steady; top vealers, $13.50. Hogs inactive, no fresh receipts.

The Trend of the Markets

THE figures in the following table represent the approximate unweighted average prices of the commodities and grades specified. The prices are based upon quotations from the market page of Pennsylvania Farmer.

	This week	Last week	Month ago	Year ago
Butter, 92 score creamery extras (N. Y.)	$ .43	$ .44	$ .45¾	....
Eggs, fresh gathered extra firsts (N. Y.)	.33½	.33⅓	.30½	.26¼
Chickens, broilers by express (New York)	.35	.40	.55	....
Potatoes, Penna, 150-lb sack (Phila).....	1.95	1.87½	1.37½	....
Steers, good to choice (Lancaster)......	9.58½	9.62½	9.87½	9.58½
Hay, Number 2 timothy baled (Phila.)..	18.50	18.50	18.50	25.50
Wheat, Number 2 red winter (Phila.)..	1.89½	1.89½	1.79	1.22
Corn, Number 2 yellow (Philadelphia)..	1.32½	1.30½	1.28½	.94½
Oats, Number 2 white (Philadelphia)..	.60½	.59	.56	.59

Receipts for Saturday's market: Cattle, 5 cars; 3 Penna, 1 Kansas City, 1 St Louis, containing 116 head, 421 head trucked in from nearby. Total: Cattle, 537 head. Receipts for week ending May 29, 1925 (no market Saturday)—Cattle, 21 cars; 8 Penna, 8 St Paul, 3 St Louis, 2 Chicago, 1 Ohio, 1 Kansas City and 1 Indiana, containing 657 head, 840 head trucked in. Total: Cattle, 1497 head; calves, 153; hogs, 188; sheep, 272 head.

Steers:—	
Good to choice	$9.25@10.00
Fair to good	8.75@ 9.25
Medium to fair	8.25@ 8.75
Common to meduim	7.00@ 8.25
Cows:—	
Good to choice	6.25@7.50
Medium to good	5.00@6.25
Common to medium	3.25@5.00
Canners and cutters	1.50@3.25
Calves:—	
Good to choice	12.25@13.50
Medium	11.50@12.25
Common	4.00@11.50
Hogs:—	
Heavyweights, 200-250 lbs....	13.50@14.00
Mediumweights, 150-200 lbs...	13.00@13.75
Lightweights, 100-150 lbs.....	11.50@13.00
Rough stock	10.25@11.50

BALTIMORE PRODUCE

Butter—Creamery, fancy, 43@44c; do, choice, 41@42c; do, good, 39@40c; do, prints, 44@46c; do, blocks, 43@45c; do, ladles, 30@31c; Ohio, rolls, 28@29c; W Va, rolls, 28@30c; store-packed, 27@28c; Md, Va and Penna dairy prints, 28@30c; process butter, 33c.

Eggs—Nearby fresh-gathered firsts, 31@31½c.

Toledo, Ohio, May 29, 1925.

Wheat, No 2 red, $1.89@1.90. Cloverseed, cash, $16; October, $14.25 bid; December, $15.80 bid. Alsike, August, $12.50. Timothyseed, cash, $3.50; September, $3.95.

FEED PRICES

The prices below are for prompt shipments based on payment on arrival of cars as quoted by the Philadelphia jobbing trade to retail feed dealers on Monday, June 1. Quotations cover solid carlots for delivery at Philadelphia or Scranton rate points.

Pure spring bran	$35.50@36.00
Spring bran	35.00@35.50
Soft winter wheat bran	38.00@38.50
Hard winter wheat bran	36.00
Standard middlings	37.00@37.25
Soft winter wheat middlings..	40.20@43.50
Flour middlings	41.50@44.50
Red dog flour	49.50
White hominy	45.00@46.50
Yellow hominy	45.50@46.50
36 per cent cottonseed meal..	45.00@45.25
41 per cent cottonseed meal..	47.50@47.75
43 per cent cottonseed meal..	49.50@49.75
34 per cent linseed meal.....	48.75@49.20

For Baltimore, Cumberland and Williamsport rate points, subtract 20c per ton (for cottonseed meal 40c per ton); for New York, Newark rate points, add 40c per ton (for cottonseed meal 60c per ton); for Woodbury, Bridgeton rate points, add $1.00 per ton; for Freehold, Toms River, Cape May Rate points, add $1.40 per ton.

Transit nearby feed in fair demand; new production shows some increase.

The Dairy Market

TAKING stock of current conditions as the new season of dairy production is getting under way reveals a situation which is of more than passing interest. In doing this it is found that the past season closed with stocks of butter in storage at a figure practically as low as at any time during the past five years, this occurring despite the record high level which was reached on September 1 of last year. Total holdings of butter in cold storage on May 1 were down to 3,700,000 pounds, which was five million pounds less than last year on the same date and three million pounds below the May 1 five-year average.

So far as influence is concerned, A carryover of but three million pounds, if of any significance at all, may be regarded as a supporting factor rather than the opposite. The new into-storage movement has already started in a small way, and as far as may be judged this began about the same time as last year, namely, the middle of May. It is to be noted, however, that the increase is occurring much slower than in 1924, which taken together with the lower starting point, indicates the probability of a June 1 storage report which will also reveal a considerable shortage under last year.

At Opening of New Season

The production situation is perhaps the most important condition to take stock of at this time. As already noted, the new season has opened. The appearance of full grass butter and cheese on distributing markets evidences the fact that cows are on pastures in some sections. It appears that butter production is running materially heavier during the present month (May) than a year ago, altho taking the calendar year as a whole, there still remains a decrease of around four per cent. Cheese production is also apparently making gains which should place it at about the same as last year's production.

Condensed milk production is doubtless being influenced to some extent by favorable butter and cheese markets, and some manufacturers have taken advantage of the relatively high prices which have prevailed on butter and cheese, converting their own milk into these products, while others have held down their production as a result of failing to meet the competition of creameries and cheese factories.

Comparison of Condensery Stocks

Like cheese, the volume of output of condenseries is not much different from last year when the whole calendar year is considered. Taking the month of April alone, available information suggests a decrease of some six per cent. Stocks held by condensed and evaporated milk manufacturers are again increasing, which, however, may not be cause for concern in view of what has just been said. On May 1 total stocks were almost equal to those of a year ago, while reports for each succeeding month since last October have revealed heavy reductions as compared with the twelve months previous.

When it comes to prices, it may be said that they have held at levels which many of the trade neither anticipated nor expected could be maintained. There have been and still are differences of opinion as to whether existing levels are safe from the standpoint of storing risks. Butter prices continue to be about higher than a year ago.

County News and Comment

Cape May County, N. J.—Not much rain during the month and everything was needing it when it came on Saturday and Sunday of last week. Potatoes are making good growth and most people are getting their corn in. This seems to be a year for the insects as there have been almost all kinds to combat. Spray cards prepared at the Experiment Station and sent out by the county agent's office to vegetable growers, on the control of insects and diseases, are quite a help to the farmers. Many farmers are mixing their own nicotine dust. The county will be quarantined this summer for Japanese beetle. However, this does not go into effect until June 15. Poultrymen are glad that the quarantine has been lifted on shipping live poultry to New York, as it is about time for shipping broilers. However, it is still necessary to use new or clean coops for shipping. Cow testing starts in this county about the last week in June. Many new dairy herds are being added to the list of those being tuberculin tested by the state. Over forty herds are now in the process of accreditation. Several herds are fully accredited. Hog inoculation work is about over, except some clean up work that will be done in June. Prof. A. L. Clark, of the Bureau of Markets, gave a talk to the farmers the first part of the month on marketing and the certification of roadside markets. Strawberries selling for 25 to 30c a quart.—E. W. S., May 26.

Clarion County, Pa.—Weather conditions for growing very poor. Snow on May 5 dropped the thermometer down to freezing which has killed about all the fruit. Frost on the morning of the nineteenth killed all vegetation that was up. Early potatoes and oats not doing very well. Corn all planted but not coming up very fast on account of the cold weather. Potatoes about all planted. Grass fields seeded last year looking good. Old sod fields look poor where the grub worms worked last fall. Garden truck not coming very fast. Few cattle turned on pasture yet. Rough feed holding out well. Corn scarce for feed and also for seed. Road masters getting the road in shape for the summer. Beef cattle high in price and scarce. Market prices: Creamery butter, 55c; eggs, 26c; wheat, $1.50; corn, $1.50; oats, 65c; potatoes, $1; veal, dressed, 12@14c; beef, dresed, 16c; chickens, 24@25c; dairy feed, $45@60 ton.—C. R., May 25.

Dauphin County, Pa.—We are having heavy rains which were needed. We have had some warm days but the average temperature has been below normal. Grass fields are in fine condition. Some fields of wheat look good while others are not so good. Some early potatoes are growing rapidly. Most of the corn has been planted. Fields of oats are looking fine. Field Day of the Dauphin County public schools was held at the county fair grounds. Much interest was shown in the various events and a record crowd attended. Prices for products: potatoes, $1; wheat, $1.70; corn, $1.30; oats, 80c; hay, $15.—I. F. M., May 25.

McKean County, Pa.—We are having very cold weather at present, last night ice formed. Fruit trees' yield will be very small. Gardens are not all planted yet. What oats that are up look good, corn not all in yet, about the average acreage will be sown. Potatoes are selling as low as 40c and a poor demand at that; the usual crop will be planted this spring. Wheat did not winter well, prospects will be good for a fifty per cent yield. New seedings look good, but old meadows poor. Pastures are fair; cattle were put on pasture about May fifteenth. Road building is going strong; several miles of hard surface will be built in the county this year.—F. J. H., May 25.

Susquehanna County, Pa.—Nearly all oats are sown and many farmers have potatoes planted and are getting ready to plant corn and gardens. Spring has been cold and freezing nights. Dirt roads are in fairly good condition where dragging is being done. Grass and clover are making slow growth on account of cool weather. Pigs very scarce and high in price. Mostly all cows are turned out to pasture. Good farm help is scarce. Fresh cows are bringing around $100. Many farms are vacant. Old potatoes are very plentiful, many cellars having 100 to 500 bushels. Susquehanna County holds a high position in state and dairy circles. Throughout the state a campaign has been launched for the extermination of tuberculosis among cattle. Our county ranks third on the list as being ready for the area tests.—J. A. O., May 22.

York County, Pa.—An old adage says: "A Frost in May for every Fog in March." While no records were kept of fogs or frost, I believe that it proved true this year. We have had many frosts and there were quite a number of foggy mornings in March. The farmers have their spring planting about all done but, on account of the ground being so cold, the crops are very slow in growing. Many fields of corn and potatoes that were planted about the last of April or the first week in May are hardly big enough now to cultivate.

The acreage of most crops is about normal, with a small increase in tomatoes and sweet corn, which was brought about by the very high prices of last season. York County is going after a record in the Keystone Ton Litter Club contest. While the exact number has not been announced yet, it is known that there will be close to fifty contestants in the county. Much interest is being taken in this county at present in the testing of cattle for tuberculosis. Many of the lower-end farmers ship milk to Baltimore, Md., and the city authorities have issued an order prohibiting milk from untested cows entering the city after January 1, 1926. So it is a case of testing or going out of business for many. Prices: wheat, $1.75; corn, $1.25; hay, $12@14; eggs, 25@30c; butter, 30@40c; chickens, old, 25c; young, 32@42c.—W. K., May 27.

Banking and Farming

(Continued from page 3)

outright seven purebred Holstein sires and placed them on the farms of seven dairymen in as many different communities. Four of these are from a bull who has nine daughters that have produced 1000 pounds of butter in a year. Two of them are from a sire with sixteen 1000 pound daughters, while the remaining bull's two nearest dams average 1128 pounds of butter a year.

R. C. Wiggins.

In addition to the Holstein work, Mr. Wiggins and Mr. Mandeville are organizing bull associations among the Guernsey and Jersey breeders of the county, procuring as sires for them high type bulls, with the bank buying them and placing them on farms under the same plans as those of the Holsteins.

Butler County is already signed up for the tuberculin test under the accredited area plan. It has become one of the leading potato producing counties; it is fast coming to the fore in poultry husbandry; a long time program for the improvement of the farm cropping system in the county is being carried out. The Butler County National Bank can justly feel proud of the part it is taking in all this work.

Lancaster Tobacco Letter

BUYERS still taking crops of 1924 tobacco out of the hands of growers can be counted on the fingers of both hands. The market is very stagnant, and the slow movement has brought prices down.

Growers are now selling at the buyer's price, which runs from six to eight cents per pound, and many are faced with the prospect of not selling their crop at any price. The farmers who decided to pack and hold their leaf are in an advantageous position compared with those who are still waiting for a buyer with their crop in the bale. These latter growers will be forced to stand a heavy spoilage loss if extreme care is not observed in handling this unpacked leaf.

While the spring season thus far has not been ideal, weather conditions have permitted the development of the seedlings in the beds to the point where many growers are setting the young plants out. The planting season will likely open up in full force next week. — Garden Spot Farmer.

Goodyear HEAVY DUTY Cord Tires, for passenger cars, buses and trucks, are available from Goodyear Dealers in the following sizes:

30 x 3½ (Cl.) 34 x 4½ (S. S.)
32 x 4 (S. S.) 30 x 5 "
33 x 4 " 33 x 5 "
32 x 4½ " 34 x 5 "
35 x 5 (S. S.)

For those who desire balloon tires Goodyear makes a complete line, including the HEAVY DUTY type in certain sizes.

BAD roads needn't mean tire troubles—not if you use the new Goodyear HEAVY DUTY Cord Tire. It's built for bad roads, fast travel, hard service. The extra-heavy, extra-tough carcass is made of SUPERTWIST. The thick tread is a deep-cut full All-Weather. Even the sturdy sidewalls are reinforced against rut-wear. Yes, this HEAVY DUTY Goodyear costs a little more. But it pays big dividends in extra mileage.

Good tires deserve good tubes—

Farmers Are Buying

FULL-SIZE GUM-DIPPED

BALLOONS

For Extra Advantages At NO EXTRA Cost!

The extra quality built in by the extra process of Gum-Dipping—the economy of these wonderful tires and the added mileage obtained from them during the past two years, has created such a large demand that over 75% of Firestone's mammoth production is now Balloon Gum-Dipped Cords.

Manufacturing Balloons on this economical basis Firestone gives you the many advantages of the extra Gum-Dipping process at no higher cost. Flexible Gum-Dipped Balloons withstand the pounding of ruts and rough roads, giving you thousands of extra miles of safer, easier riding. They save your car, add power and reduce the running cost.

Have your nearest Firestone dealer equip your car now—with liberal allowance for your old tires.

Firestone

AMERICANS SHOULD PRODUCE THEIR OWN RUBBER H. S. Firestone

Make Your Leaky Roofs Watertight

At less than 2 cents per square foot

NO NEED to tear off the old roof! Just brush on a coat of **National Asbestos and Asphalt Liquid Roofing.** Wood shingles, felt, tin or rubber roofing—it makes no difference.

It takes asbestos and lots of it to make a long-lasting roof coating. And asbestos—that's been our business for 35 years. Isn't it logical then, that the safe and reliable place to buy roof coating is **right here at asbestos headquarters?**

National AanA Roof Coating is a *real product,* made by a *real firm* with a *real reputation* to uphold. Different from any roof coating you have used, or seen advertised. Contains no coal tar or other short-lived ingredients.

Why take chances with 'fly-by-nights' who concoct thin mixtures with little or no asbestos, that after 4 to 6 months dry, check and crack—for which you pay as much or more?

Nationa AanA Liquid Roofing when properly applied is guaranteed to make any roof positively stormtight for ten years.

We pay the Freight—Send this Coupon

The Light in the Clearing

(Continued from page 21)

Then a cheer from the boats, in which I joined.

I shall never forget how, when the company had landed and the greetings were over, Uncle Peabody approached your mother and said:

"Say, Sally, I'm goin' to plant a kiss on both o' them red cheeks o' yours, an' do it deliberate, too."

He did it and so did Aunt Deel and old Kate, and I think that, next to your mother and me, they were the happiest people at the wedding.

There is a lonely grave up in the hills—that of the stranger who died long ago on Rattleroad. One day I found old Kate sitting beside it and on a stone lately erected there was the name, Enoch Rone.

"It is very sorrowful," she whispered. "He was trying to find me when he died."

We walked on in silence while I recalled the circumstances. How strange that those tales of blood and lawless daring which Kate had given to Amos Grimshaw had led to the slaying of her own son! Yet, so it happened, and the old wives will tell you the story up there in the hills.

The play ends just as the night is falling with Kate and me entering the little home, so familiar now, where she lives and is ever welcome with Aunt Deel and Uncle Peabody. The latter meets us at the door and is saying in a cheerful voice.

"Come in to supper, you rovers. How solemn ye look! Say, if you expect Sally and me to do all the laughin' here you're mistaken. There's a lot of it to be done right now, an' it's time you j'ined in. We ain't done nothin' but laugh since we got up, an' we're in need o' help. What's the matter, Kate? Look up at the light in God's winder. How bright it shines tonight! When I feel bad I always look at the stars."

(The End)

EPILOGUE

Wanted by all the people—
A servant
Born of those who serve and aspire
Who has known want and trouble
And all that passes in The Little House of the Poor.
Humbly must he listen to their voice, as one who knows that God will often speak in it,
And have charity even for his own judgments.
Thus removed, far removed from the conceit and vanity of Princes
Shall he know how great is the master he has chosen to serve.

Veterinary

Conducted by W. C. Fair, V. S.

Advice thru this department is free to our subscribers. Each communication should state history and symptoms of the case in full; also the name and address of writer. Initials only will be published. We cannot make reply by mail. This is one of the most valuable columns of the paper and we invite readers to make use of it. Clippings from this column, when properly preserved and classified, make one of the most valuable medical symposiums a farmer-stockman can obtain.

MANGE.—I have a mare that begins to rub her neck and shoulders every winter when I stable her. The hair drops out and I thought she might be troubled with lice, but I failed to find any on her. The skin is covered with pimples and much irritated.—L. H. P., Beallsville, Pa. Give her two drams of Donevan's solution of arsenic at dose in feed or in drinking water two or three times a day; also keep the skin clean and apply coal-tar disinfectant according to directions daily.

INDIGESTION.—I have a 1400-pound mare, six years old, that has had two attacks of sickness six months apart. The first symptoms noticed are a slight movement of the bowels, heavy breathing and pain as tho she might have colic. She lies quietly on her side for perhaps an hour and then will stand for a short time and look at her sides. This trouble continues until I am able to get a free movement of the bowels, and then I find the food has not been digested. I give her water before feeding and never when she is heated. She is fed two quarts of oats and one pint of bran three times a day and timothy hay. The grain is reduced when not working. She seemed to eat rapidly so I put small stones in the feed box. She is always in good flesh, quite ambitious and seems to sweat easily. There is always a lump of salt in her manger. Her work consists of not over eight hours on the farm. She entirely recovered from the first attack, but has only had this attack three days, but seems to be improving.—C. J. W., Waymart, Pa. Doubtless you have a case of indigestion and if you will give her one-half ounce doses of diluted nitro-hydrochloric in drinking water after each meal she will soon recover. In treating a case of this kind it is considered good practice to give a cathartic, then give what I have prescribed.

OPENING IN SIDE OF TEAT.—I bought a Holstein cow last winter that was dry; now she is fresh and I find a hole in the side of teat thru which the milk sprays when the udder fills up. The canal thru the teat is open and seemingly all right.—H. D. M., New Tripoli, Pa. When dry, have your veterinarian operate on her, the wound in side of teat can be healed. It is difficult to heal the wound and close the opening while the cow is in milk.

VACCINE OR COWPOX.—I have a Holstein cow that is full of sores around the head and neck, and our veterinarian tells me it is a case of cowpox. His treatment seems to fail to help her. Can she be cured?—O. P., Danville, Pa. Washing the sores twice a day with a weak solution of zinc chloride (2½ per cent solution) will greatly hasten healing. The contagion of cowpox does not travel thru the air from animal to animal, but is transfused by actual contact of the contagious principle with the skin of some susceptible animal. An identical disease frequently appears upon horses, attacking their heels, and thence extending upward along the leg, producing, as it progresses, inflammation and swelling of the skin, followed later by pustules. These soon rupture, discharging a sticky, disagreeable secretion. Other parts of the body are frequently affected in like manner, especially the region of the head, where the eruptions may appear upon the lips and nostrils, or upon the mucus surfaces of the nasal cavities, mouth, or eyes.

HOGS UNABLE TO WALK.—I have two hogs which are unable to walk. They had been in the stable for some time until about a week ago when I let them out in a lot. About an hour after they were out I discovered they were unable to walk, both hind legs seem helpless, the following morning another was in same condition. They do not appear to be sick and have good appetites. I feed whole corn, slop consisting of ground corn, oats and buckwheat.—J. A. S., Mt. Pleasant Mills, Pa. Had you fed more clover, alfalfa roots and furnished them with minerals such as crushed limestone rock, air slaked lime and salt, and fed less corn and allowed them to take more exercise, they would not have lost the power of their hindquarters. Discontinue feeding corn and furnish some of the above mentioned foods and minerals to them, or if the paralyzed hogs are fleshy market them for food.

FITS.—We have a small black cat about one year old. He is a very good cat, but sometimes has had a fit. During the spell he runs and jumps, froths at the mouth, and is very much excited.—C. F., York, Pa. Give him one-half ounce of castor oil. Forty-eight hours later, give fifteen drops of equal parts of fluid extract of spigellia and senna. Give this once a week for three weeks. Feed him some raw carrots, or pumpkin seed.

AMAZING VALUE FOR ONLY $82.50 [Plus Freight]

Don't pay from $15 to $25 more for other engines when you can buy this E-B 3 H.P. Quality Engine at this new low price.

Has all desirable features of modern first class engines—Throttle Governor that regulates fuel to load, Oscillating Magneto, Kerosene-Gasoline Carburetor, Fuel Pump, etc. Sturdy, compact. Weight 450 lbs. Steady power for your milking machine, feed grinder, pump, woodsaw, etc.

FARM LANDS

CALIFORNIA FARMERS make more money on small farms in San Joaquin Valley, California, where you can work outdoors all the year. Splendid opportunities for men of moderate means. Twenty and forty acre farms produce alfalfa abundantly. Dairying, hogs and poultry make good returns; staple varieties of fruits yield dependable profits; combination of these means a well-balanced farm with good income throughout the year. Winterless California offers much to the man looking for a country where he can get the most out of life. Climate delightful, long growing seasons; wonderful roads; excellent schools. Cooperative marketing associations afford profitable outlets for all produce. A small one-family farm, cutting out high labor costs, insures success. No winter handicaps. San Joaquin Valley illustrated folder mailed free on request. C. L. Seagraves, General Colonization Agent, Santa Fe Ry., 914 Railway Exchange, Chicago, Ill.

180-ACRE PENN. FARM—$3800. $3000 income; equipment and team, 4 cows, 100 poultry, sheep, potatoes, oats, rye, hay included; motor bus passes, best markets; 100 acres tillage, 190 bearing fruit trees; insurance $5500 on good 8-room house, basement barn, poultry house, other bldgs. Aged owner sacrifices at $3800, part cash. Details pg. 99 new 196 pg. Catalog farm bargains thruout 24 states. Free. Strout Farm Agency, 1422-BE, Land Title Bldg., Philadelphia, Pa.

What a Difference the Fordson Makes!

When the weather is hot and the grain fast ripening, then Fordson owners fully appreciate the value of tractor power.

Many more acres harvested in a day than was possible in the old way—a big saving in hired help, in time, and in effort.

Belted to a separator, Fordson power makes threshing much easier. No delays—the whole job cleanly done and the grain ready for market.

Every farm task is performed with dispatch when the Fordson is put to work. Its cost is forgotten in the face of its splendid, satisfying performance.

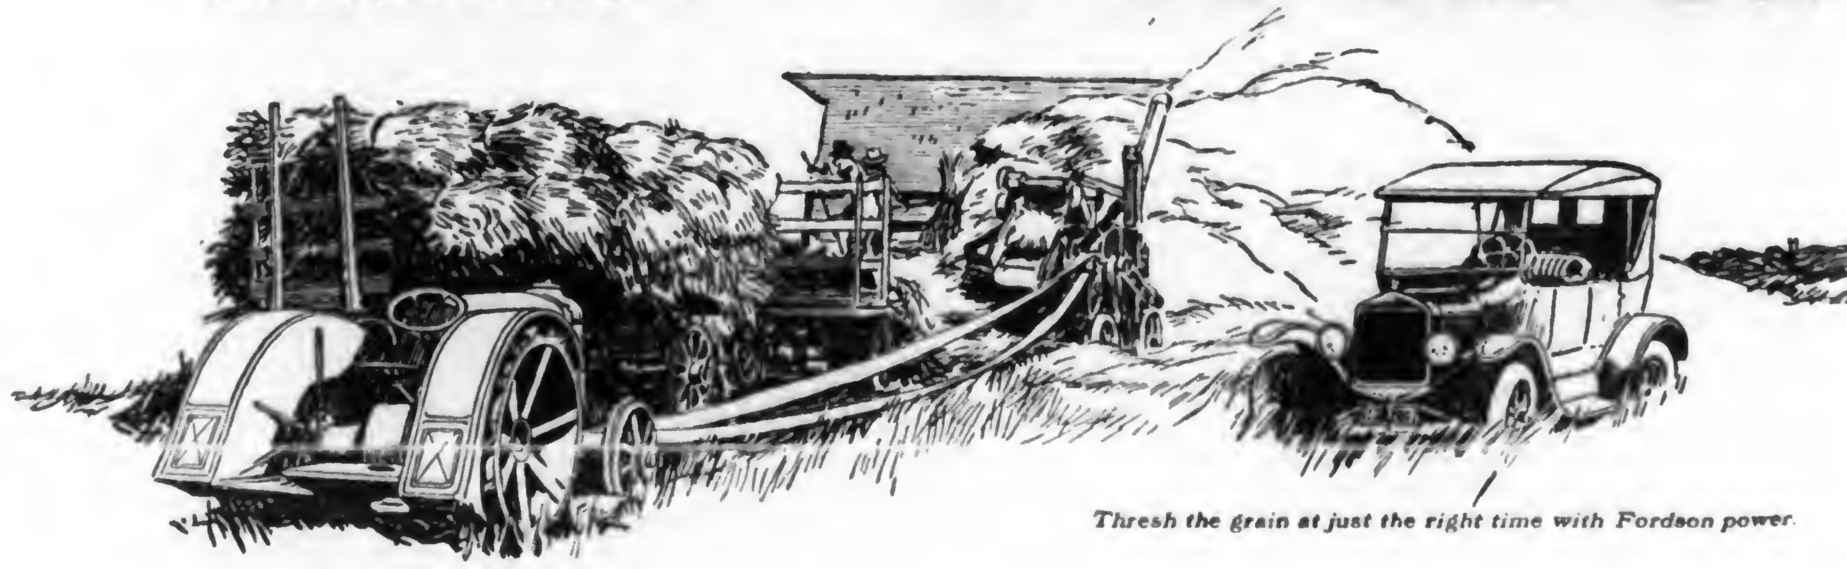
Let the nearest authorized Ford dealer give you a practical demonstration of Fordson on your own land.

Ford Motor Company
Detroit, Michigan

Fordson

Getting the grain in quickly is as important as cutting it.

Ford trucks haul the bushels to market.



Thresh the grain at just the right time with Fordson power.

If the Lights Didn't, What Did?

Mr. Weatherby's Fight on the Oriental Moth Raises Some Important Questions

THE article in our issue of May 23 on the use of electric lights to control the Oriental moth has stirred up much interest among peach growers and entomologists. Readers of the article will recall that Mr. Hurff Weatherby, of Swedesboro, New Jersey, installed 125 electric lights and oil traps in his sixty-acre peach orchard and kept them burning for six hours each night while the moth was active in 1924. His loss in moth-damaged fruit that year amounted to less than a dozen baskets, while in 1923, before the lights were installed, his loss was about 10, 000 bushels.

Following the publication of the article a widely known Pennsylvania entomologist wrote us that he was sorry to see such an article appear in Pennsylvania Farmer, as "all of the workers in entomology are agreed that the Oriental moth positively is not attracted to lights of any color."

This Pennsylvania entomologist continued:

"The Oriental moth is active for the most part thruout nearly any portion of the day, but is especially so between the hours of four in the afternoon until early dusk and from daylight until about eight o'clock. We have no reasons to believe that it is at all active at night. The entomological workers of the states concerned including New Jersey, Pennsylvania, Virginia and Maryland, together with the Bureau of Entomology of the U. S. Department of Agriculture, are sparing no efforts on their part to find out some satisfactory means of control for the Oriental fruit moth. We are able to do something in the control of the moth in the way of killing the egg with the nicotine sprays, and the adults may be captured by attracting them to bait pans containing fermenting sugar. Other than these methods we know of no direct controls other than cultural practices."

We Asked Others What They Thought

Upon the receipt of this letter we wrote to three New Jersey entomologists and to three neighbors of Mr. Weatherby who are themselves large growers of peaches. We asked them all to tell us what they knew about Mr. Weatherby's use of electric lights for moth control and to state their own ideas on the subject.

We publish herewith the letters we received in response to this request. Due to lack of space parts have been deleted, but we believe that the sense of the letters has not been changed. We first give the letters from the entomologists, then those from Mr. Weatherby's neighbors, and finally one from the author of the original article.—The Editors.

Believes Lights Ineffective

YOUR letter of May 25, addressed to Dr. Headlee, has been referred to me for reply.

Knowing that there would be more or less interest on the part of fruit growers in this work of Mr. Weatherby's, we made it a point last season to keep the effects of his lighting system as a control for the Oriental peach moth under observation. I personally visited the orchard quite frequently thruout the summer and on certain dates took definite counts to determine whether or not any of the Oriental peach moths were being attracted by the lights in the cans filled with kerosene emulsion.

Lights Attract Many Insects

As perhaps you know the Oriental moth is a very small moth, not exceeding one-half inch in length and approximately one-eighth of an inch in breadth. Mr. Weatherby's lights attracted, as stated in your article, a large number of different species of insects. Owing to the fact that these insects, after dropping upon the film of kerosene became saturated with the material, it was very difficult to determine exactly the species which were caught. Our counts, therefore, have to do with only the small moths which might possibly be Oriental moths. I made counts on the following dates:

Date	No. of pans examined	No. of possible Oriental moths in pans
May 31	18	1
June 6	58	0
July 8	31	2
July 16	18	0

In other words, on dates ranging from the last of May until after the middle of July, the total number of pans, 125, in the orchard, were examined with a total of three moths being found which might possibly be the species which Mr. Weatherby was endeavoring to combat with his lights.

In the article the statement is made that the infestation in the Weatherby orchard was decreased tremendously last season owing to the use of the lights in comparison with the infestation of the previous year.

This condition was true thruout the state, however, and I am stating in the accompanying table the counts which were made of a large number of peaches of different varieties in representative orchards located in three different sections of New Jersey:

Location and variety	No. of fruit examined	Infested and injured fruit
Weatherby Orchard, August 13, 1924:		
Carman	500	1.6%
Elberta	500	6.0%
Iron Mountain	500	1.4%
Middletown, August 11, 1924:		
Carman	1000	3.6%
Iron Mountain	500	2.1%
Glen Moore, August 12, 1924:		
Elberta	500	5.0%
Iron Mountain	500	7.6%

In view of the fact that it was impossible to determine the species of insects collected due to their saturation with kerosene, we constructed twelve metal cones at the end of each of which was placed in a bottle containing calcium cyanide. These traps were substituted for the kerosene pans beneath the lights. Catches were made on the dates of August 6, 7, 8, 13, 14 and 15th. The material contained in the cyanide bottles was in good condition and it was possible to determine the material which we had. In no case were any adults of the Oriental moth taken in the catches with the cyanide jars.

I think you will see from the data in regard to examinations of the catches in the pans as well as from the results of the catches with the cyanide traps and also from the data on fruit infestation that the efficiency of the electric lights in attracting the moths was very doubtful. In fact, my personal impression in the matter is that they were of practically no benefit at all to Mr. Weatherby in combating the pest.—Louis A. Stearns, Assistant Entomologist in Charge of Oriental Peach Moth Investigations, New Jersey Agricultural Experiment Station, New Brunswick, N. J.

Bait Attracts Adults

SO FAR as my experience goes I can say that I have never seen adult Oriental fruit moths come to lights of any kind. An occasional adult may come but it would be more of an accident than a usual rule. Mr. Stearns can give you direct information about Mr. Weatherby and his test.

So far as I know only certain baits will attract adults and if properly handled one may secure large numbers. The adults are most active about sunset and a short time thereafter. This is the time of day adults come to bait pans.—Alvah Peterson, Oriental Fruit Moth Investigations, Bureau of Entomology, U. S. Department of Agriculture, Riverton, N. J.

Heavy Infestation in 1924

I HAVE been very much interested in Mr. Kirby's article, entitled, "Electricity Saved the Peach Crop," and am pleased that you have seen fit to publish it in your columns.

Higher Standards for Potatoes

NEW JERSEY potato growers should benefit from the action taken by the dealers of the central part of the state at their recent meeting at Princeton. Having suffered severely in recent years from the competition of carefully graded stock from other producing sections, these dealers resolved to meet the situation by raising the standard of that part of the New Jersey potato crop which passes thru their hands. They decided, unanimously, to accept no field run potatoes in 1925; to make every effort to grade their potatoes to meet the requirements of U. S. Grade No. 1; to employ two trained inspectors to visit all loading stations to acquaint growers and shippers with the grade requirements.

Value of Cultivation

WE ONCE heard an institute lecturer tell how he raised a good crop of corn on a worn-out field by intensive cultivation and without the aid of fertilizer or manure. The field was plowed in the fall, harrowed six times before planting and cultivated nine times during the summer. It used to be the ideal practice in our old neighborhood to "go thru the corn" four times. It seemed to be believed that there was some magic in that number. It was unfortunate if less than that were possible, and anything more was a waste of time. Now, we know that a good farmer cultivates just as many times as necessary (when it is possible) to keep the weeds down and to conserve moisture. He also gives attention to the kind of cultivation given. On the other hand, many farmers plow thru at the same depth all summer, regardless of its effects upon the roots.

The advocates of intensive cultivation received a setback some years ago when one or two experiment stations found that corn plots on which the weeds were kept down by pulling, but which received no cultivation whatever, produced as much corn as those cultivated systematically. However, we do not believe that settles the question. Had it been another season when soil and moisture conditions were different, the results would likely have been different. The accumulated experience of centuries indicates that the practice of intelligent cultivation is the safest policy.

The Weather

THERE is probably no subject worn more threadbare by use than that of the weather. It is usually the first and sometimes the only subject of conversation when people meet. It would be difficult to imagine a more futile pastime. Most people are not satisfied to discuss present weather nor that of the past week or year, but they launch boldly into a prophecy of what we are likely to have next week and next month. Recently we have read of one "weather sharp" who said we were in for another "year without a summer," such as was experienced in 1816. Since then we have heard from another who says the summer of 1925 is likely to be the hottest the human race has ever known. Well, if we average the two the result will be the kind of weather we are most likely to have.

The weather serves as a subject when people have nothing to talk about and for editors when subjects for editorials are scarce.

Fiction for Summer

IT IS our plan to publish a few short stories during the summer season instead of a serial as usual. These short stories will likely require more than one issue but they will be short as compared with those we have been publishing. It is much easier to pick a good long story than it is to get a number of equally good short stories. Last winter we asked our readers what they had read recently and requested them to name their favorite magazines and books of fiction as well as the papers they liked best. The answers named everything in the catalog of printed matter. From this we know that no one type of story will suit everybody. The short stories which we are about to run may not all suit you as an individual, but every one will probably suit somebody.

Funds For Tuberculin Testing

THE following paragraphs outline briefly the plan, as summarized by Dr. T. E. Munce, under which the indemnity funds appropriated by the last legislature will be disbursed by the Pennsylvania Bureau of Animal Industry.

The Governor approved $2,099,000 for indemnity purposes for the two-year fiscal period beginning June 1, 1925. Of the above amount $99,000 will be held in reserve for paying glanders indemnity claims. The balance, $2,000,000, will be distributed as follows:

One fifth, or $400,000, will be allocated to the various counties, excepting those completely tested by Area Plan, according to cattle population as heretofore, to be used for paying T. B. indemnity claims under the Individual Accredited Herd Plan. The remaining $1,600,000 will be used to pay indemnity claims in connection with area work.

The first installment amounting to $100,000 to be used in paying indemnity for cattle condemned under the Individual Accredited Herd Plan has been allocated to the various counties as per paragraph above. Additional allocations on the above mentioned cattle population basis will be made as needed so long as the money set aside for Individual Accredited Herd testing is available.

Because of the limited amount of money for defraying operating expenses and the large volume of other work that they shall be obliged to perform, Bureau veterinarians will not be able to apply many tests under the Individual Accredited Plan. Therefore, owners who have filed application under the Individual Accredited Plan and desire to test immediately, may do so by employing their own accredited veterinarian, as provided for in Section 13, Paragrph B of the Accredited Plan. Each and every such test, however, to be official, must be authorized in writing to the accredited veterinarian from this office.

Oriental Fruit Moth Control

THE letters on page three about the use of electric light traps for controlling the Oriental moth are not published with the idea of starting a controversy over the efficacy of this method of fighting a dangerous fruit pest. We are presenting as many facts as we can gather from the men who should know most about the subject. We are trying to find the answer to this question: If the lights didn't reduce Mr. Weatherby's losses from moth injury, what did?

Readers will notice one or two important differences between the testimony of the entomologists and that of the Gloucester County peach growers. If the airing of these differences, and a still more careful study of the facts of the case, should reveal an economical and effective way to control this destructive insect, fruit growers will be grateful. They don't care how the moth is controlled as long as the way is practical.

New Game Laws

THE game laws of Pennsylvania received many changes at the hands of the legislature and it would be well for every sportsman and every farmer to get a copy of them as soon as possible. We have received some requests to publish the game laws as they now are, but that is impossible owing to space limitations. The Game Commission has shown a sympathetic attitude towards just complaints of farmers and the members have lent their influence to have such changes made as will, it is hoped, better protect farmers and fruit growers from loss. Most of the sportsmen's organizations of the state, also, acquiesced in the passage of bills which were intended to correct undesirable conditions. We have no doubt that if those who are interested will write to the Secretary, Game Commission, Harrisburg, Pa., asking for a copy of the changed laws he will be glad to send it.

Referred without Comment

UNDER this heading we publish an editorial on some current topic taken from the columns of a contemporary paper. Its publication does not necessarily mean that the sentiments expressed are the sentiments of Pennsylvania Farmer.—Editors.

These anti-prohibitionists are hopeful souls. Once more they are about to offer a light-wines-and-beer program to Congress. This winter they will assail the cost of enforcing prohibition and attempt to hook themselves on the tail of the Coolidge economy kite by declaring that the $40,000,000 spent this year in booting the bootlegger into oblivion will require $100,000,000 next year. Once more they will try to slip an entering wedge of nullification into the Eighteenth Amendment. They have about the same chance as the traditional paper cat chasing the asbestos rat thru the regions where the fire burneth forever and ever. The Sixty-eighth Congress was as dry as a desert bone. The Sixty-ninth will be as dry as a fence rail in a droughty August. The persons who are putting up the money for the wet lobby must be more hopeful than an elderly, cross-eyed, wooden-legged widower.—From the Public Ledger, June 1.

Washington Letter

APPROVE PRESIDENT'S STAND. —The position taken by President Coolidge on law enforcement and state rights, in his Memorial Day address, appears to have met the approval of farm folks everywhere. His intimation that those state officials who are loudly clamoring for state rights are the most flagrant in their neglect of the rights their states now possess in law enforcement, is regarded as especially pertinent to the present situation in several eastern states.

"What we need," he says, "is not more federal government, but better local government. Yet many people who would agree to this have large responsibility for the lapse of local authority."

CONDEMNS DOLES TO STATES. The President gave a timely warning against the "insidious practice" of dividing the expense of public improvements between state and national treasuries. The policy of "national doles" to the states is bad and may become disastrous. "When the national treasury contributes half, there is temptation," he says, "to extravagance by the state. We have seen some examples in connection with the federal contributions to road building."

COURT DECISION HITS ANTI-TRUST ACT.—The Supreme Court, with three members dissenting, has held that "trade associations, combinations or corporations, are not engaged in unlawful restraint of trade when they disseminate information as to the cost of their products, volume of production, actual prices involved in past transactions, stocks of merchandise on hand and the cost of transportation from the principal points of shipment to the points of consumption, nor when they meet and discuss such information."

This decision is held by Dr. T. C. Atkeson, of the National Grange, as breaking down all restraint against combinations in trade and commerce as was intended to be imposed by anti-trust legislation, including the Sherman law and Clayton amendment.

While it clearly nullifies the intent of the anti-trust laws, it evidently clears the way for the large cooperatives to meet and discuss production, markets and prices, without fear of any conflict with these laws.

INCENSED AT CATTLE PRICE REPORTS.—There is much dissatisfaction on the part of purebred cattle breeders associations with the recent reports of the Department of Agriculture on sale prices of purebred cattle in the various breeds, which showed a lower price trend in 1924 than in 1923. Many breeders of purebred cattle are incensed at the Department's reports, saying that they misrepresent actual conditions in the purebred stock market. When the matter was taken up with the Department officials by Secretary A. M. Loomis, of the American Dairy Federation, those responsible for the reports decided to make further investigations before giving a definite reply.

POTATO MEN ALSO IRRITATED. The Department of Agriculture has also incurred the displeasure of organized potato growers in some sections, because information was broadcasted that intentions of farmers to plant showed a six per cent decrease in potato acreage this year, which led many farmers to believe they should increase their acreage. G. W. Peterson, manager of a Minnesota cooperative, says that as the result of the Department's advice members of his association have increased their acreage ten per cent over last year, with the prospect that if a normal yield of potatoes is obtained, the growers will not get anything for their crop.

PLAN NATIONAL POTATO EXCHANGE.—The organization of a nation-wide potato growers exchange is under way, with the presidents of the Colorado, Minnesota and Maine potato pools promoting the project. A meeting of representatives of these three organizations, together with representatives of the Michigan Potato Growers Exchange and the Federated Fruit and Vegetables Growers will be held this month, according to the National Council of Farmers Cooperative Associations. Marketing economies thru interchange of information and the correlaton of sales campaigns are the chief purposes sought in the organization of the national agency.—E.E. Reynolds.

Harrisburg Letter

MONEY FOR SCHOOLS AND COWS.—The Commonwealth of Pennsylvania is pretty nearly now in position to meet its payments for school appropriations and cattle indemnities as well as township rewards when due. Of course, the two-year appropriations have been spread out so they will not all be eaten up in the first six months or year; a careful method of checking up on how much is necessary has been evolved. State Treasurer Samuel S. Lewis has announced he will pay the school apropriations as they are received, which will mean even less waiting than has been required the last two years, while the Bureau of Animal Industry plan as announced by Director T. E. Munce shows $400,000 allotted to counties subject to their call on certification of inspections and tests for tuberculosis and $1,600,000 for two years' area work. Where state veterinary officers are not available to handle the tests, arrangements may be made for veterinarians to act under special authority for each herd. It is estimated 250,000 head are now under supervision and as many more awaiting inspection. The tuberculosis work is now entering upon what Secretary Frank P. Willits says will be its most extensive phase.

THE WORLD IS OUR MARKET WITH THAT FELLOW ON THE JOB!
HE'S FULL OF PEP!
CO-OPERATIVE MARKETING
LEET

He will be the biggest Salesman in the world.

DR. SHAW IN CHARGE.—Dr. Robert C. Shaw has been placed in charge of the rural education work of the Department of Public Instruction and will work out some of the problems considered in the survey of that branch of state school work. Dr. Shaw has been in close touch with this line of work for five years and will develop plans for closer local cooperation.

BUILDING ON BIG ROADS.—Summer bidding plans of the State Highway Department include offering of contracts for construction of large sections of permanent road on much traveled highways, in some cases the roadway being wider than heretofore. Some of these sections will be in vicinities of Philadelphia and Pittsburgh. In a short time there will be decisions on extent of borough and township sections to be undertaken.

OIL EARTH ROADS.—The remainder of this month will be devoted by the State Highway Department to oiling of the dirt roads in townships which are cared for as part of the state system. Contrary to opinions, the sections in the MacDade Act of 1925 do not become part of the state system until 1926.

WILL HEAR PEOPLE.—The State Taxation Commission is going to leave corporation and inheritance taxes alone for a while and will start a study of local taxation with the object of getting information for bills in the next legislature which will straighten inequalities and so on. Most bills of this character have been beaten in recent years. The Commission intends to go deeply into local taxation and will conduct hearings at which people will be invited to speak their minds.

IDLE OR ABANDONED?—The latest request to be made of people handling crop reports is for information to straighten out whether Pennsylvania has many abandoned farms or some which are only unoccupied. There has been a great deal of discussion of this subject back and forward and the report will call for a statement on both. It is not thought the abandoned farms are nearly as numerous as claimed.

NEW LAWS READY.—State game authorities have made ready digests of laws bearing on construction of fences against game and right of farmers or orchard owners to shoot deer and other animals when destroying crops. These were changed by the acts of 1925 and it is believed the practical operation will be with less friction this summer and fall.—Hamilton, Harrisburg.

New Jersey Letter

ROADSIDE MARKETS OPENING. —Spring vegetables and berries are now being offered generally thruout New Jersey at farmers' roadside markets. It is noticeable that the stands and roadside market booths this season are of more permanent construction, signifying the rapid growth of this type of selling. The plan of the New Jersey State Bureau of Markets supported by various farmers' organizations, to create a standard market, has given the plan a boost. Recent conferences in Trenton of farmers conducting large roadside markets indicates a general reception of the idea. The State Bureau, cooperating with prominent farmers, has created a code of practice which, if met, entitles the farmer to a certificate and the use of the term "New Jersey Standard Farmers Roadside Market" in his advertising. There is a penalty of $100 attached to the use of this term by a farmer who has not complied with the state code.

PEACH APHIS TROUBLESOME. —Peach growers in central and southern New Jersey have suffered a heavier attack of the green peach aphis than in some years and peach orchards thruout the fruit belt, unless sprayed consistently, have suffered greatly. The pest has been troublesome even in the orchards of growers who have followed the usual spraying practices. A heavy fall of young peaches was expected this season. Growers generally are of the opinion that prices will be good on well graded and packed fruit.

FALL LEGISLATIVE MEETING. Representatives of the various organizations of farm interests in New Jersey are now discussing the date for the annual fall legislative conference, to be called by the New Jersey Federation of County Boards of Agriculture and the New Jersey State Grange. This event usually takes place in Mid-September in Trenton, to which representatives from all of the state farm organizations and institutions are invited. The plan is for the development at that time of a preliminary legislative program for the coming winter.

FIELD DAY PLANS COMPLETED. —The New Jersey State College of Agriculture and Experimental Station has practically completed its plans for the reception of farmers on Annual Field Day, June 18, on the College Farms in New Brunswick. The new dairy and animal husbandry building at the College will be dedicated on this date, Judge N. Y. Dungan, of Somerville, presiding at the ceremonies. The college now boasts of the largest peach breeding orchard in the world. This will be open to the visiting farmers who will have an opportunity to see the eight new varieties of peaches perfected during the last year. The poultry program for the day includes a tour of the remodeled poultry plant. Invitations to many farmers and agricultural organizations have been accepted, insuring a large turnout for the day. —B.

New York Letter

MILK BOTTLE INVENTOR DIES. —Dr. Hervey Thatcher, of Potsdam, is dead. He was the inventor of the modern milk bottle, of butter and cheese coloring, and of many other chemicals useful in the home and on the farm.

PROBE OF CATTLE SCANDAL CONTINUES.—The third week of the probe into the substitution of "T" branded cows for healthy ones in Cortland County continues. Every cow in this territory will be inspected before a final report is made or prosecutions begun. A corps of fifty-six veterinarians are now combing the herds of the county, sixteen new ones from the state and federal governments having arrived on June 1st. Local or private veterinarians have done most of the work so far, and a demand has been made that the New York City board of health send more veterinaries to help in the big task. Conferences are held each night. Fewer substituted animals are being found in the past few days and it is hoped that the frauds are not so extensive as had been feared. Cortland City has passed a new milk ordinance, requiring that all milk, ice cream, or skimmilk sold in the city after January 1, 1926, shall be either from tuberculin tested herds or else that it be pasteurized.

FARMERETTES SOUGHT.—Ulster County has placed with the state federation of labor a call for 500 young women to help in fruit orchards. They will live and work in groups, under care of a matron and will be able to earn $6 to $12 a week above cost of board and other expenses.—M. G. F.

Stop that Knock Forever!

KNOCK KNOCK KNOCK

Thousands are installing Vec Bearing Adjusters every day!

Thousands of farmers realizing the great damage done to motors thru loose bearings and out-of-round shafts are installing Vec Bearing Adjusters at a very low price.

This startling new invention keeps bearings tight and stops that knock forever. Easy to install—you can do it yourself in less than an hour. Just put the Vec bolts in and tighten the patented safety nut with your fingers. No shims to fit. Simple instructions with every set.

Many dollars and wasted hours saved—and the job will last forever.

Think of it! 50,000 miles guaranteed without a bearing knock, with a money back guarantee if not satisfied.

If your dealer cannot supply you order direct from us.

Sizes for all motors—automobiles, trucks and tractors. Also for main bearings on Fords

Our best testimonial:—Over 100,000 satisfied users.

Just sign the coupon for illustrated circulars and send to us—with no obligation on your part.

(OUR FARM)

Where an Editor Works and Thinks

WE SET our early tomato plants in the field May 28th. They could have been put out earlier but the nights were so cool as to give a hint of possible frost even up to the date named. A light rain fell soon after we were thru but it has been dry and windy since and we are not sure yet just what they will do. It is a difficult job properly to harden tomato plants that have been grown rapidly, especially in a season which is so cool as to require the use of glass so much of the time as was necessary this year. We find that the sun and wind has set them back greatly and, compared with their vigorous appearance when set out, they are now—a week after setting—a sick looking lot of plants.

✣ ✣ ✣

WE ALWAYS water-in plants when setting them out. This year we filled a barrel with water and hauled it on a truck. A hose was used to siphon the water out, running about a pint into each small hole which had been previously made by a stroke of the hoe. Fifty or sixty holes were watered and the plants set, then the truck was moved up. In this way two of us were able to water and set 250 plants per hour.

✣ ✣ ✣

OUR colored man, Clem, has a holy horror of weeds or grass in crops. He is a most diligent and thoro worker. In fact he is so thoro that one has to keep a watchful eye on him to see that the crop itself does not suffer by his use of the hoe and cultivator, as he is inclined to work too close to the plants in his desire to get all the weeds and grass. And he does get them. After he is thru with a patch it is clean. Many people fail in the use of the cultivator, either by going so close to the young plants as to injure its roots and setting, or by keeping so far far away that the row soon becomes a mat of weeds and grass requiring the hoe.

✣ ✣ ✣

WE FIND a fourteen-tooth cultivator an absolute necessity at Neshaminy Gardens. We always had one in our former farming but they are so scarce in this neighborhood we had despaired of finding one outside of a mail order catalog. However, we asked our home implement dealer and found one. In fact, we have yet to be in need of a piece of machinery or an implement that he does not have, or cannot get on short notice. When one is starting a new place the value of having a home merchant is especially appreciated. The existence of such a stock of goods in a farming community is a valuable asset when repairs are wanted quickly in a busy season. Of course, Clem does not think much of the new cultivator. He says it does not "kiver de grass" as well as the wide shovels.

✣ ✣ ✣

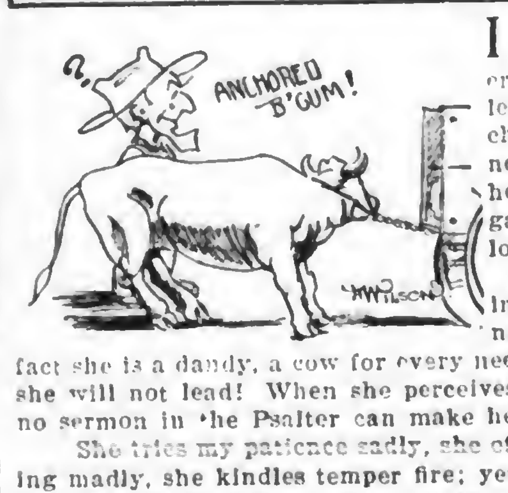
WE PICKED the first ripe Cooper strawberry on May 28. We have only a few plants of last year's setting—possibly 200—but we never saw such a set of fruit in spite of the fact that the very earliest blossoms were frozen. The two varieties, Cooper and Gibson, are both new to use but they promise well. When one compares the best and finest strawberries of today with those grown thirty and more years ago, (the Kentucky was the first I remember) it is readily seen that mechanics and the arts are not the only fields in which big improvements have been made.

✣ ✣ ✣

HOW well should work be done? One of the mottos that hung on the walls of the old school house was, "Whatever is worth doing is worth doing well." While I have not always followed it literally the influence of that precept has been with me always. I refered to it once when talking with an old farmer and he said the motto was not complete; that it should read, "—well enough to serve the purpose." Another man once amended so as to read "—as well as it will pay to do it." How clean is "clean cultivation?" How good is, "good enough?" How nearly straight is a straight row? Of course, everyone will answer these questions for himself. Every good farmer has ideals which he never quite reaches, but there is a practical element in all these things. Theoretically, it is easy to answer them as one will find who turns to the books written by "authorities" and "experts," but the man who must make his efforts pay in dollars and cents frequently finds he must be satisfied with less than the "best." However, we should not lose sight of the fact that there is an esthetic value in the results of work well done.—R. P. K.

THE CHEERFUL PLOWMAN

The Cow That Won't Lead



I HAVE a cow named Plodder, of dim, uncertain breed, whom neither force nor fodder can ever coax to lead. On nearly all occasions she is a cheerful beast, not subject to evasions nor stubborn in the least. She never hooks a neighbor nor breaks a patent gate; she never shirks a labor nor loots a cababge crate.

She is a gentle feeder, she's pleasant in her stall, comes quickly when you need her, and never frets at all. In, fact she is a dandy, a cow for every need, so kindly and so handy, and yet—she will not lead! When she perceives a halter is clamped about her neck no sermon in the Psalter can make her move a speck!

She tries my patience sadly, she often stirs my ire, she starts me chanting madly, she kindles temper fire; yet, later when I ponder I audibly confess, "Poor Plodder over yonder is like myself, I guess!" I, too am fairly quiet in normal walks of life; I seldom start a riot and never beat my wife; I think I'm sane and pleasant about the barn and house, a tactful sort of peasant, as harmless as a mouse,—till someone gets a halter, and says, "See here, my man, you must not fight nor falter, but toady to my plan! It's up to you to follow, to tag along behind; you must not balk nor wallow, but step along and mind!"

Well, that is where my nature takes on a sudden turn, that baffles nomenclature and makes me taut and stern! That's where myself and Plodder are very much agreed, for neither force nor fodder can ever make me lead!—J. Edw. Tufft.

All the elements of Safety

Arnold First Mortgage Guaranteed Certificates have all the elements of safety. They are secured by First Mortgages on improved real estate deposited with a Trust Company.

Every Arnold Certificate is an undivided part of the trust held by the trustee, thus being in fact an interest in various first mortgages given by different parties and secured by various properties, all of which are combined in one trust.

In addition to the mortgage security Arnold Certificates are further secured by the company's capital and surplus of $1,250,000.

They are issued in amounts of $100, $500 and $1,000 to run from 2 to 10 years, and may be purchased outright or on monthly payments.

Questions on Soil and Crops

Answered by J. G. Lipman, Staff Contributor and Adviser

There is a question I'd like to ask you. There is a lime kiln near here and we have been in the habit of hauling lime in the winter when it is good sleighing. We usually put it in big piles and then put it on the ground after we have it plowed for corn. Sometimes these piles come out very well, that is, a good share of the lime is just like it came from the kiln, but other times it is different. Last winter I hauled 240 bushels and put it all on one pile and I handled it all in about ten days' time. I had it shaped up good to a peak. When I spread it this spring the biggest part of this lime was damp and caked and I have my doubts if it will do the good it is intended for. This is burned chunk lime.—P.D., Montour County, Pa.

Freshly burned lime acts more powerfully on the soil than does slaked lime or raw ground limestone. Nevertheless, where the land is sour any one of these forms may be used and, provided a sufficient amount is applied, the acid condition will be corrected.

The fact that some of the lime in your heap had become lumpy is a drawback because it is harder to distribute lumpy material evenly. On the other hand, the lime has not lost its ability to neutralize soil acids and should, therefore, bring about an improved condition of your land. — J. G. Lipman.

Use of Land-plaster

ONE of our correspondents wishes to know about broadcasting land-plaster. The answer to his question follows:

The use of land-plaster is an interesting subject. As you probably know, the use of land plaster began in this country after the middle of the eighteenth century. Benjamin Franklin was a great advocate of the use of land-plaster and carried out a demonstration experiment with fertilizer in which he showed that land-plaster gave good results when used on different crops, particularly on clover. Early in the nineteenth century a survey was made among farmers in eastern Pennsylvania as to the results obtained with land-plaster. The answers from different farmers are summarized in a little booklet which was published and which has become quite rare.

Best Results with Clover

It appears that land-plaster usually gave good results in connection with clover. On the other hand, with other crops the results were irregular and uncertain. We now know that the element sulphur contained in land-plaster may not be present in sufficient amounts for a vigorous crop of clover, alfalfa and other legumes, as well as crops like cabbage, cauliflower, rape, turnips, etc., require rather large amounts of sulphur and may not always find it in the soil. Hence, where farm-yard manure only is used, applications of land-plaster may prove profitable.

Recent investigations in Oregon and Washington show that land-plaster, or any material containing the element sulphur, will give very large returns when used in connection with alfalfa and clover. Where commercial fertilizer is used more or less regularly, the need of applying land-plaster is not so apparent, since mixed commercial fertilizer usually contains very considerable quantities of land-plaster or of other sulphur-carrying material.

The early experience with land-plaster as gathered in Benjamin Franklin's day shows that applications of 50 to 200 pounds per acre broadcasted usually gives the maximum benefit. Recent investigations on the Pacific Coast bear out the experience of more than 100 years ago. You would be quite safe, if you are intending to broadcast land-plaster, to use 100 to 150 pounds per acre.—J. G. Lipman.

High Analysis Fertilizer

FOR the benefit of the readers of Pennsylvania Farmer we are quoting here a letter which has come to hand from one of our fertilizer companies and also the reply to that letter.

"Last spring we offered a 4-16-4 fertilizer for the first time. Since our price for this analysis is figured on the same basis per unit of plant food as are prices for low analysis goods, it offers a considerable saving to the consumer in freight, overhead, etc. It is our intention to make a strong drive this fall with 4-16-4 for wheat on upland soils. Your comments on the advisability of using this analysis under average conditions would be appreciated."

The Answer

"The use of more concentrated fertilizers has attached to it advantages with which you are familiar. The disadvantages lie in the frequent failure of the farmers to recognize that the more soluble and concentrated fertilizers must be used with greater care and discretion. We have had complaints this spring concerning injury done by fertilizer to sweet corn. The fault lies not in the fertilizer itself, as a rule, but in the method of application.

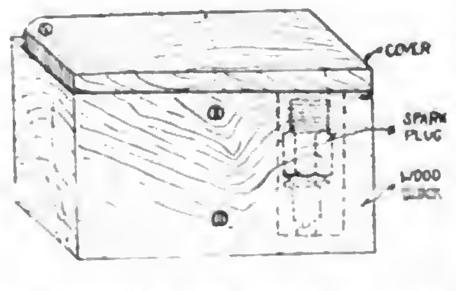
"Where the fertilizer is placed below the seed or one to two inches away from the seed on the same plane, there is but relatively little damage done even where large applications per acre are made. The nature of the soil, season, amount and distribution of rainfall, as well as the nature of the crop, are all important factors.

"Where 500 pounds or more per acre are applied in the row or hill, it would be well to caution the farmers to use the material in such fashion as to avoid damage. Properly designed and constructed fertilizer distributing machinery would remove many difficulties from the path of the manufacture of high analysis fertilizers."—J. G. Lipman.

Spark Plug Container

EXTRA spark plugs are often thrown under the seat and into the toolbox, with the result that the porcelains are broken and cannot be found without a general housecleaning. A container similar to the one illustrated saves its cost by protecting the spark plugs and making them instantly available.

A wooden block, two by four inches, and of suitable length, had two one and a half inch holes drilled in it. It was then fitted with a swinging cover, and screwed to the dash, beneath the hood. It gives complete protection to two spark plugs.—A. C. W.



It Protects

READY FOR USE — PURE OIL — UNITED STATES STANDARD MEASURE — LUCAS TINTED GLOSS PAINT — PHILADELPHIA

Now! You Can Preserve and Beautify Your Home on the Easy Payment Plan—

To prevent cracking in alternate extremes of heat and cold, PAINT as well as glass must allow for ample expansion and contraction

It is unnecessary to further delay that much needed painting job—get in touch with the *Lucas* dealer and arrange through dealer and the painter for protection against further property loss, on convenient time payments. To provide a dependable and economical protection against weather, select *LUCAS* TINTED GLOSS PAINT, because:

IT COVERS
more square feet per gallon and more thoroughly hides the surface, due to finer grinding of materials, a higher percentage of pure linseed oil, and *LUCAS* superior methods of combining all ingredients into one perfectly finished product.

IT BEAUTIFIES
and its beauty lasts because of its high gloss and clear, perfect shades, made with pure tinting colors of *Lucas'* own manufacture, possessing maximum permanency.

IT LASTS
longer because it is made of highest grade materials, carefully selected, scientifically combined by skilled workers of long experience.

IT PROTECTS
positively because its smooth, glossy surface is resistant to weather. Its elasticity prevents checking or cracking during temperature changes, consequently preventing moisture, the cause of decay, from getting to the underlying surface.

IT IS ECONOMICAL
Its GREATER COVERING CAPACITY reduces the cost of application.
Its GREATER LASTING QUALITY decreases the cost per year of protection.
Its GREATER PROTECTION saves costly repairs.
Its GREATER BEAUTY increases the value of your property, reflects prosperity and radiates happiness.

Ask the nearest Lucas dealer—or write us—regarding the Easy Payment Plan for preserving your property.

FREE BOOK ON HOME DECORATION

Big and Powerful but *Light-Weight*

The New 25-45 *Light-Weight*

OILPULL Tractor

MOST likely you have heard of the performance records that have already made the smaller models of the new *Light-Weight* OilPull line famous.

Now Rumely engineers have gone a step further and applied the same remarkable features to a tractor of great power—rated 25-45—but smaller, more compact, lighter and more easily handled than the usual tractor of equal power.

Many Exclusive Features

"Hair Line" governing gives this big fellow the *even* power of a steamer. *Oil cooling* prevents overheating. *Fuel consumption* is unusually low, due to light weight and advanced engineering. All moving parts are enclosed. The Ball Bearing Transmission reduces friction. A Drive-wheel Interlock, patented, prevents one wheel spinning, miring or digging in. Improved carburetor assures even greater fuel economy.

Manager Pomona Gardens, Newark, Delaware

Watering Tomato Plants

A FARMER asks, "Does it pay to water tomato plants by hand when you set them in the field, and have no transplanting machine?" In dry weather, on sandy soils, and with tender plants it undoubtedly does pay. If the planting can be done at leisure, so that the best parts of the day can be used for it, one can often set rather soft plants in warm weather without watering them.

Again, when there are plenty of plants to replant missing hills, and time is available for replanting, it may be more economical to take some chance in setting without water. On the other hand, when one has very choice plants of a particular variety or strain, and there are just enough of them to set a certain field, it is certainly unwise to do without the watering.

To Avoid Baking

Many times the benefits of watering are lost because the soil around the plants is allowed to cake in the sun, so that the last state of the plants is worse than if they had not been watered. Experienced men know that they should throw loose earth over the moist earth before the hot sun has a chance to bake it. Thus, if one plants in afternoon and evening, watering at that time, the next morning is a good time to hoe some dry soil around each plant.

A careful and observant plant setter can sometimes help the recovery of his plants by leaning them a little toward the south, so that if they wilt the sun will not strike them with such scorching rays. This is especially worth while when one sets the plants in the bottom of a furrow, which is to be filled later by cultivation.

When the furrows run east and west, the plants wilting on the south slope are somewhat protected from the full heat of the sun. On north and south rows I would prefer to slope the plants to the east, tho there may be differences of opinion on this point.—W. C. P.

Garden Notes

SO MANY cabbages and cauliflowers have succumbed to the maggot that we have planted hills of snap beans between all of the original hills of cabbage and cauliflower, just to be sure that there will be a crop of some kind from this land. After a loss of less than one per cent last year we were not expecting a loss of thirty or more per cent this year. It appears that the maggots prefer cauliflower to cabbage, and Copenhagen cabbage to Wakefield, if one may judge from the appearance of the patch.

The thing to do next year is clear enough; we will use a poison solution around the roots, applying it with one of the maggot guns which a Pennsylvania gardener has devised for the purpose of saving time and strength. This year, tho we cannot prevent injury to plants already attacked, we expect to get back some of the fertilizer in the bean crop, and we may also plant sweet corn between the cabbage rows as soon as the land seems to be fairly free from early weeds. It will take careful cultivating and some hand hoeing to make the land fit for the two crops at the same time.

Plantings of Brussels Sprouts

We have received samples of Long Island Brussels sprouts seed for trial, and made one planting about May twenty-sixth. Another will be made from June 10 to 15, as the donor of the seed writes that he sows his seed between May 30 and June fifteenth. The dates seem late for us here, altho it may be that we have been planting the seed too early in other years, and have obtained chiefly, loose sprouts instead of tight hard ones. It seems likely that a warm, dry climate is not favorable for Brussels sprouts under any conditions, whether the seed is sown early or late.—W. C. P.

Farmers' Day at State College, June 18th

THE program for Annual June Farmers' Day at State College commences at 8.00 A. M., Thursday, June 18, with a number of discussions on timely subjects, together with an inspection of the old fertility plots and an explanation of forty years' experiments with fertilizers, lime, and manure; a trip thru the poultry plant; and an inspection and discussion of variety tests of wheat, oats and barley. The program continues thruout the day with the discussions and demonstrations starting at 10.00 A. M. and 1.30 and 3.00 P. M.

A public sale of young dairy cattle will be held at 4.30 P. M. in the Stock Judging Pavilion. The evening program will include musical numbers, an address by Dr. John M. Thomas, president of the Pennsylvania State College, and the awarding of prizes won in the Junior contests.—A. L. B.

New Jersey Field Day

THE annual Field Day at the New Jersey State College of Agriculture, New Brunswick, is to be June 18th. In the morning, men prominent in agriculture will describe the general trend and influences of farming. The afternoon will be devoted to tours of the field plots, buildings, and laboratories where the experiments are conducted.

Methods and materials for killing insect pests will be shown by authorities on insect control. Demonstrations of actual spraying and dusting operations are expected to draw a large attendance.

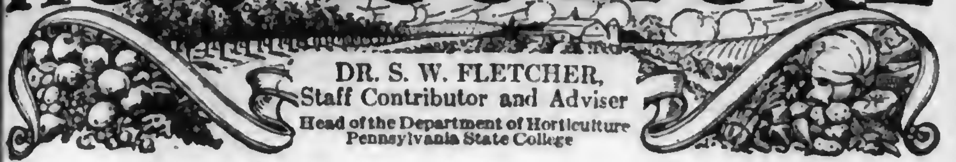
Prof. M. A. Blake, chief of the horticultural division of the experiment station, is scheduled to give a talk on the peach breeding work which has recently resulted in the production of eight new varieties.

Dr. F. R. Beaudette, poultry pathologist, is to give a talk on fowl plague, its cause, symptoms and control.

Cattle Breeders Represented

Judge Nelson Y. Dungan of Somerville, is to deliver an address in connection with the dedication of the dairy and animal husbandry building recently completed at the station.

The department of home economics has arranged a series of talks on home management, clothing, and food problems for women. A playlet entitled, "Come into the Kitchen," written by a Bergen County woman and played by women of that county, is to be given.



HORTICULTURE

DR. S. W. FLETCHER,
Staff Contributor and Adviser
Head of the Department of Horticulture
Pennsylvania State College

Airplaines Join the Battle on Orchard Pests

"Corvallis, Ore., May 15.—The first dusting of apple orchards ever attempted by airplane in this section was recently carried out successfully here by the department of entomology in cooperation with the army air service, which applied lead arsenate and sulphur to twenty acres of apple orchard south of here.

"A new device attached to the side of the army plane discharged the dust at the rate of nearly two pounds per second as the plane skimmed over the tops of the trees at a speed of fifty miles per hour. The experiment was continued for nearly three hours, altho only five minutes of actual dusting time was required to cover the twenty acres."—The Packer.

This generation certainly does speed it up," all along the line, whether it be in music, from the An- ie Laurie of my youth to the latest yncopated jazz; or in travel, from he old Dobbin of my boyhood to the test "whiz" in roadsters; or in praying from the feeble squirt guns f 1885 to the airplane dusting of 925.

Commercial spraying is scarcely fty years old. It has been such a pid succession of changes and im- ovements, not only in materials nd methods of control, but also in achinery, that any book or spray- g written in 1920 would be out-of- te in 1925; and the book written 1925 will require almost annual vision to be a reliable guide to ractice.

The drift is inevitably toward sting and away from spraying. he largest factor in the cost of pro- ucing fruit is labor, and dusting ves labor. Any method that will ve labor is bound to become gen- ally adopted, provided it gives rea- nable control.

Dusting Not Yet Standardized

Dusting has given reasonable con- el in many orchards, but not in all. he same is true of spraying, but to less degree. This shows that dust- g has not yet become as standard- d as the older practice. Differences local conditions must be studied. uit growers have yet to learn the chnique of applying dust, which is ite different from the technique of pplying spray. The high power sting machinery of 1925 is very uch more efficient than the ma- inery of 1918. The materials are ore finely ground and hence more ective.

Dusting is gaining ground, especially in the larger orchards. He is a rash man who ventures to predict the future of spraying, yet I am tempted to prophecy that twenty years from now dusting will have largely supplanted spraying in the control of orchard pests. I set the date this far ahead only because we shall need at least that much time to develop a body of dusting knowledge, from experiments and experience, that is comparable to the present knowledge of spraying.

Much of the unsatisfactory results from dusting, as from spraying, have been due to faulty application. Men have used only one-half pound per tree when they should have used one pound. They have dusted in the middle of the day, when the heat is rising, carrying the dust straight up into the sky like an Indian signal fire. They have dusted on a breezy day, when the dust is carried across the fields, instead of being held in the orchard.

The Best Time to Dust

Usually it is best to dust between four and nine o'clock in the morning, before the breezes rise, and while the leaves are wet with dew. Two men can dust more trees in those five hours than they could spray in a twelve-hour day. Night is the best time to dust. The air is likely to be still, and heavy; the dust billows among the branches, and does not rise. Some growers do all their dusting at night, using either an acetylene searchlight, or a light from the tractor that pulls the duster. Nicotine dust, however, should be applied in the morning of a hot day, which will volatilize the nicotine quickly.

As for airplane dusting, at first thought it seems more spectacular than practical, yet who shall say what the future may hold for this method in very large orchards? One has only to cast an eye back over the developments of the past thirty years to become very cautious about saying: "It can't be done." The prospect of dusting large orchards by airplane a few years hence is far less of a strain on the imagination than the use of the four-cylinder, 350-pound pressure sprayer would have seemed forty years ago. Something new develops — and perhaps something perilous—almost every minute in fruit growing. This makes it one of the most fascinating, as well as one of the most hazardous of farm enterprises. The fruit grower takes big chances; he deserves fair returns. —S. W. Fletcher.

Does Fruit Growing Pay?

READ the article in Neshaminy Garden notes on this subject in ay 30 issue and was much interest- d. I know nothing about Chester ounty conditions for fruit growing, ut here in old Tioga County I grew p with it.

I was born in 1862, and that pring my father and mother planted n orchard of about 100 trees—ap- les, pears, plums and peaches. Some f the latter trees came into bearing efore I can recollect, but the apple ees began in about nine years. Be- g the only son then I did nearly ll the drawing to market, a distance f about five miles. The conveyance as a team of oxen and a lumber agon. From the time fruit began o ripen until the following June we d some fruit to sell.

When I was thirteen years old we sold $100 worth of peaches. At that time silver dollars looked larger than wagon wheels to me. Fifty cents per bushel was then a big price for apples. Nevertheless, one year my father sold over $500 worth of apples.

Did it pay? Well, we had no more than six acres in fruit but we got more cash from it than from all the rest of the farm. We did not have to consider the "ifs" and "buts" in those days. My mother was a horticulturist and she was bound to make it pay.

Here in Tioga County we can grow all kinds of fruit from strawberries to apples, but it takes all the "ifs" in that May 30 article and if a man is looking for something for nothing he will be disappointed. — A Tioga County, Farmer.

ALPHA CEMENT

reduces your expenses, because ALPHA CEMENT improvements and structures do not require repairs and paint. Build them in 1925 and they will be serving you in 1975.

Your local ALPHA Dealer has a valuable, 112-page Cement Construction Handbook full of helpful suggestions on home, yard, farm and business-place improvements. It's free to you, with his compliments and ours.

To a Hampton Roof the Kind of Weather Makes No Difference

PENCO HAMPTON METAL is the greatest of all rust-resisting Irons (not steel) and is made from a special formula that has proven its superiority over all others. We have made exhaustive tests for years: soil tests, acid tests, salt air tests and weather tests and know that in Hampton Metal we're offering you the best that money will buy; that is if you measure value by the number of years a roof will last.

For barns, sheds, pump and tool houses, in fact all farm buildings there is nothing else so good. It is fireproof, spark-proof and withstands the blistering sun, blustering winds, beating sleet and driving rains alike and, if properly grounded is one of the best lightning safeguards. Can be put on easily and quickly and may be had in all styles: corrugated, V-Crimp, Pressed Standing Seam, Imitation brick or stone, etc. NEEDS NO PAINT.

If there's such a thing as roofing permanently it's with Hampton Metal

You owe it to yourself to know more about how metal is made and why some is better and lasts longer than others. If you wish to include measurements of any space you'd like to cover we'll be glad to figure it and give you a price, including nails, and washers, delivered right to your station.

PENN METAL COMPANY, 25th and Wharton Sts. Philadelphia, Penna.

Send for Hampton Booklet and a sample of Hampton metal.

The Old Reliable Hall
Built Better Than Ever

YOU feel safe with a Hall Mammoth Incubator tested for a quarter century. The present model carries all the latest improvements with added refinements. Customers report that the cabinet work goes together without a hitch. It is made by cabinet specialists in one of the largest factories of the kind. You may select a Single-Deck, Double-Deck or Triple-Deck Model — capacities 1,200 to 36,000 eggs. If you have a Single-Deck — any make — top it with a Hall Deck and double your capacity.

Hall Triple-Deck Incubator hatches equally well on all decks.

It is none too early to look into Hall construction. There's a special discount for wise buyers who order early. Write for illustrated folder, testimonials and special summer prices.

Kirby Poultry Farm

Bumble Foot

Could you tell me what to do for my Silver Laced Wyandotte rooster? His head is nice and red, doesn't look sick, but he doesn't eat, has diarrhea, steps very high, and seems to gap as tho he had something in his throat. He is very poor. I have given castor oil at three different times and kerosene once; also rubbed his throat with balsam of myrrh. Could flying from a high roost stove him up and cause him to walk the way he does? I removed the high timber he roosted on and he now roosts on the regular roost but never gets down himself. We always have to take him down. He walks around part of the time, crows occasionally, but doesn't crow natural. Would be glad if you could tell me what to do.—B. R., Huntingdon County, Pa.

Examine the throat as far down as possible for canker around the windpipe or foreign material such as straw. If a canker spot is located, remove the yellow pus and paint the wound with iodine. Flying from a high roost often causes a heavy bird to develop an abscess in the foot called bumble foot.

Lance this abscess by making a deep cut. Wash the wound with iodine and bandage. Isolate the bird on clean straw and give it plenty of feed. A lame bird is handicapped when eating with the flock and may become very thin. When a male bird becomes very sick it loses much of its value as a breeder and had better be killed. This is especially true if the bird rapidly emaciates which is often a symptom of some disease in the internal organs.—R. G. K.

What Is the Cause?

What is the cause of white diarrhea in old chickens? In a month I have lost three chickens, two old ones and one only a year old. I have seen another young one that has it. I fed one cow bitters and poultry powder but it died. I am feeding wheat and buckwheat. We live on a farm and they can run out. Please give me cause and prescribe a remedy.—Mrs. A. M., Lehigh County, Pa.

Bowel trouble among hens is either a symptom of disease or due to simple digestive disorders caused by the lack of a balanced ration, spoiled feed or any condition such as crop bound which injures the digestive system. I would feed a dry mash containing twenty per cent bran and a sprinkling of fine charcoal. This helps prevent bowel trouble. The easily digested ground grains in the dry mash seem to keep hens in better condition than when they receive only hard grains and green feed.

Perform a postmortem on any birds that die and study the condition of the internal organs, especially the liver. This may give a clew to the causes of the losses and suggest a means of preventing further trouble.—R. G. K.

Chick Growing Mash

Will you please send me the formula for the best growing mash for growing chicks?—S. W. D., Montour County, Pa.

A good mash mixture for chicks is the Cornell Formula 213 which consists of 25 pounds yellow corn meal, 20 pounds wheat bran, 20 pounds flour wheat middlings, 10 pounds fine ground heavy oats, 10 pounds fine ground meat scrap (50-55 per cent protein), 5 pounds bone meal, 10 pounds dried milk products (part buttermilk) and ½ pound fine salt. If the chicks have plenty of buttermilk to drink, the dried milk products can be omitted.

There is no best growing mash for chicks as breeders have personal preferences based on their own experiences with certain rations. Some breeders use the regular laying mash given to the old birds as a growing mash for young stock and have good results. Plenty of sour milk and a grassy shady range is necessary for best results.—R. G. K.

Turkeys Aren't Well

What can I give my turkeys for diarrhea? They won't eat and only drink water. Is it contagious? What is the best feed for young turkeys?—W. H. M., Westmoreland County, Pa.

Turkeys with diarrhea may have digestive disorders caused by overfeeding, eating sloppy mashes, spoiled feed or chilling. Boiled rice is sometimes given to young poults as a help in controlling simple digestive troubles. Serious cases of bowel trouble might be due to blackhead for which there seems to be no satisfactory cure.

A good starting feed for young turkeys is stale bread moistened with milk and squeezed nearly dry. Finely chopped boiled eggs mixed with corn bread crumbs will give good results. After the first few days use fine chick feed. Turkeys are seed and insect eaters and need a good range. Sloppy mashes are apt to cause bowel trouble.—R. G. K.

Uncle Sol threw aside the letter he was reading and uttered an exclamation of impatience.

"Doggone!" he cried. "Why can't people be more explicit?"

"What's the matter, Pa?" asked Aunt Sue.

"This letter from home," Uncle Sol answered, "says father fell out of the apple tree and broke a limb."—Kreolite News.

Even a Good Paper Is a Bad Egg Crate Filler

THE Pennsylvania Bureau of Markets has been making a study of the condition of Pennsylvania eggs when they arrive in the New York market. During April sixty-nine shippers lost an average of sixty cents per case or two cents per dozen on account of the improper packing. One out of every three cases was found, upon inspection in New York, to contain smashed, leaking, cracked or stained eggs, or to have eggs missing. Most of this loss was caused by the use of old fillers and packing material. The Bureau reports that there was breakage in every case where newspapers were used as flats and pads and were stuffed down the sides of the case.

The counties which suffered the heaviest losses on their egg shipments were Bradford, Lebanon, Lancaster, York, Cumberland, Potter, Crawford, Pike and Adams.

During the Summer Months

Poultry Trouble That Comes with Hot Weather

WHEN summer comes, many of us think that most of our ailments are over with until another fall and winter. This is true to some extent with poultry also, but in spite of this, there are some things that exist in the summer time to help make life miserable for the poultry keeper. Some of these ailments or troubles can be prevented while others are seasonal and must be looked for with hot weather.

Ovarian troubles are, without doubt, the leading troubles with poultry during the summer months. When one stops to consider, it is reasonable to expect them, because the birds are just finishing their season of highest and most intensive egg production; the ovarian system has been functioning more than most of the other systems of the body for a period of three or four months, or even longer, and has, therefore, been under a severe strain. Lack of green food and close confinement are also responsible in a great measure for ovarian troubles.

Prevention Rather Than Treatment

The most common form of ovarian trouble is known as prolapsus of the oviduct, which is the eversion of a portion of the oviduct thru the vent. With some birds, this of itself would not amount to anything serious, since they may go right on laying in spite of the prolapsus. The danger comes, however, from other birds picking at the protruding oviduct. When the protrusion is first noticed, it should be pushed back into the body and carbolated vaseline applied.

Plenty of green food supplied to the birds in one form or another will help this condition. If it is not possible to provide a good sod or a crop producing a luxuriant growth, green food of some form must be fed the birds to make sure they get it.

Where prolapsus is prevalent in spite of green food and range, a cut should be made in the amount of protein—generally meat scrap—in the ration. This will cause a drop in egg production, but will get the birds back into condition.

Other forms of ovarian troubles, such as ruptured oviducts, are the result largely of individual conditions within the birds themselves and are more or less beyond the control of the poultryman. The prevention of ovarian troubles is more important than the treatment, and that means proper management of the laying stock right from the start.

Rats are a great source of trouble on any farm, and it is probable that they cause more of the poultryman's troubles than they have been given credit for in the past. A united and determined effort should be made by farmers at least once a year to rid their farms of these pests.

Summer generally brings a number of poisoning cases, due partly to the hot weather and partly to the fact that the birds have access to the yards, and sometimes, unlimited free range. This latter fact prevents the careful supervision of the birds' diet, and enables them to pick up all kinds of things.

Poisoning

Ptomaine poisoning is probably the most common form of poisoning and is caused by decayed flesh or moldy feed. Frequently, it happens that a rat or a rabbit or a chicken or some other kind of animal will die, and lying exposed to the hot sun all day, will quickly decompose. If the birds find this and eat it, ptomaine poisoning is very apt to result. There is no treatment for such poisoning, as the effects are too sudden. Prevention is the only thing: the ranges, yards, and other places where carcasses might be found, should receive very careful attention. When found, carcasses should be burned.

Poisoning may also come from paint skins that were thrown on dump heaps to which the birds have access. I know of a case where mortality was very high from poisoning because the chickens were allowed to drink water that came thru lead pipes immediately after the workmen had finished the watering system. They died from lead poisoning.

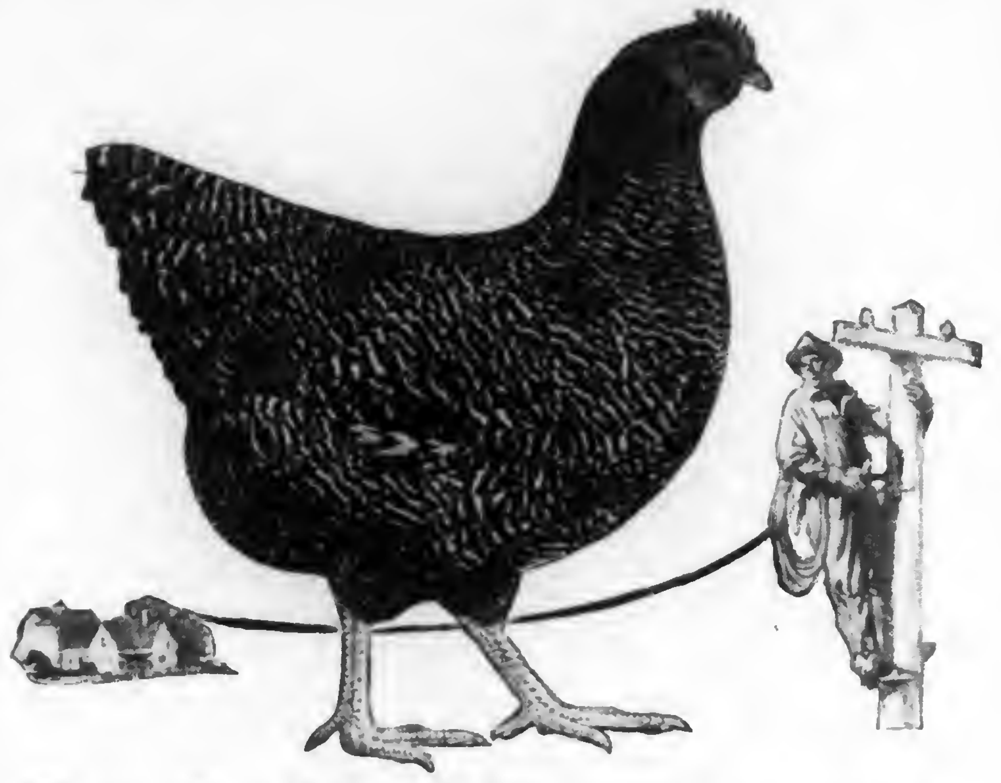
Another trouble that is quite common in summer, especially where any of the heavy breeds are kept, is loss from heat prostration. This, of course, occurs only in severe hot weather. The birds will sink down on the floor or ground and will gasp for breath. The birds should be removed immediately to a cool, quiet place, and their heads and legs soaked with cold water.

Troubles of Other Sorts

We have been thinking of summer troubles, so far, taking the form of disease. There are, however, other troubles for the poultry keeper than disease. Take, for example, a drop in production, an increase in the number of birds that are molting, and a steady consumption of feed. This situation can easily be met by a systematic culling carried on thruout the summer every two or three weeks. Holding over a number of non-producing birds at this season means a loss of money.

This falling off in production during the summer, might in many cases, be forseseen and prevented to some extent the previous fall. By feeding heavy on the grain ration in the fall and early winter in order to maintain body weight, the birds will be in better condition in the late spring and early summer and will be more likely to maintain their production than if forced for heavy egg production in the fall and winter.—Ralston R. Hannas.

Cool breezes speed the day's work for the farmer and his team.



Profitable Hens Provide Modern Conveniences

What farmer or farmer's wife hasn't longed for such modern conveniences as electric lights—throughout the house, barn, garage, chicken house?—the toil-saving, time-saving, motor-driven sewing machine or washer? Make life on the farm worth while. The quick and easy means is right at hand:

Speed Up Your Flock of Laying Hens

They'll pay for these luxuries. But not at their *present* rate of production. For the average flock only delivers about five dozen eggs per hen per year. This same flock properly culled and properly fed *can* produce ten to twelve dozen eggs per hen per year. Your flock may already be producing at this excellent rate. Even so, you can improve its condition and still further increase its egg yield by scientific feeding with Ful-O-Pep.

Fed on Ful-O-Pep Growing Mash Pullets and Cockerels Mature Rapidly

This remarkable strength-building ration promotes the most rapid development—big, strong birds that start early bringing home the profits. Your big, well-grown cockerels—and your early laying pullets are a fine foundation for the best laying flock in your neighborhood.

Read How Successful This Ful-O-Pep Feeder Is:

"Just a word for Ful-O-Pep Feeds.

"May 8, 1923, I bought 300 day-old chicks and raised 130 pullets out of the 300. They commenced laying September 23; in November I gathered 2,399 eggs and in December 2,786 eggs, and Ful-O-Pep Feeds certainly turned the trick."
B. B. Goodsell, Rome, N. Y.

P. S.—Year ending April 1, 1924, Mr. Goodsell made a profit of $300.00 from 145 hens fed on Ful-O-Pep Egg Mash and Scratch Grains.

"Ful-O-Pep Feed is great 'stuff.' I have a flock of 50 hens in a small back yard, consisting of half Rhode Island Reds and half White Leghorns. I have received for the six months of this year 5,148 eggs. Have fed nothing but Ful-O-Pep Egg Mash and Scratch Grains. My eggs have cost me an average of a little more than 15c per dozen for the above period. I consider this very good as my hens have had no special care, and this shows what Ful-O-Pep will do. I am a 'booster' for your feeds." *W. F. Rauschenberg, Albany, Ala.*

Some good dealer near you sells the Ful-O-Pep line of feeds. See him. Talk it over with him. He can supply your needs.

Feed Ful-O-Pep Chick Starter first six weeks, for strong bones and swift growth

Feed Ful-O-Pep Fine Chick Feed from second to sixth week

Feed Ful-O-Pep Growing Mash from sixth week through five months

Feed Ful-O-Pep Coarse Chick Feed from the sixth week to the fifth month

Begin feeding Ful-O-Pep Egg Mash at fifth month and feed all year round

Feed Ful-O-Pep Scratch Grains from sixth month on—one quart per day to each twelve birds

Give them What They Want

Don't let the green pasture fool you. Your cows may be giving a lot of milk, but they are not making it on grass alone. They are also making it from the protein and lime stored in their bodies.

Every animal needs protein for both health and production. Fresh pasture contains some protein, but not enough to support the cow and enable her to make milk. Unless you feed her some grain with the grass there is a sad day coming.

When the cow is on pasture alone she may soon drop off in her milk yield. It is then difficult to bring her production up until she freshens again. She may go into the Winter in poor condition and lose money for you.

Your animals want a feed that they can **convert** into meat—milk—butter fat. The most easily convertible of all protein feeds is **Corn Gluten Feed.** Feed it in your grain mixture during the Summer and you'll make more money.

Standard for 30 Years

Corn Gluten Feed has been the standard protein feed for thirty years. It is the best feeding part of corn. It gives you the most digestible protein per dollar.

You can get Corn Gluten Feed from your feed dealer or any manufacturer. If you mix your own ration your main protein ingredient should be Corn Gluten Feed.

If you feed a ready-mixed feed it will pay you to buy from a manufacturer who uses Corn Gluten Feed as one of his main ingredients. It makes any ration better and more profitable to the man who feeds it.

Our Bulletin No. 1 contains several good rations for summer feeding. If you have not seen a copy please write us and we will mail it to you.

Staff Contributor and Adviser
Head of the Department of Dairy Husbandry,
Pennsylvania State College

Calves Don't Grow

I have two calves, one twelve months old, the other fourteen months. They don't seem to grow the way I think they should. I fed these calves separator milk up to the time they were a little more than eight months old. Up to that time they seemed to do well but since that time they haven't made much headway. I feed these calves about a quart of grain twice a day and good clover and alfalfa hay morning and night.—P. D., Montour County, Pa.

Your practice in feeding your calves seems to be all that could be desired. Clover and alfalfa hay for roughage with a grain mixture of oil meal, bran and chop would seem to be an ideal ration for them. The trouble must be elsewhere than with the ration.

Calves May be Lousy

I wonder if your calves might be lousy. If you notice them licking themselves and rubbing against posts in the barn yard the trouble is likely to be from this cause. A lousy calf, even tho well, makes little headway. A close examination will give you the information as to whether the animal is infested with lice.

The United States Department of Agriculture recommends spraying the animal thoroly so that every portion of the surface of the body receives the maximum possible wetting. Special attention being given to the head, ears, brisket, tail, and inner surfaces of the ribs, flanks and thighs. Two treatments should be given fifteen to sixteen days apart. The following preparations have proven effective. 1. Cottonseed oil and kerosene, equal parts. 2. Crude petroleum. 3. Any of the common coal tar or cresote dips.—A. A. B.

Lehigh's Best Cow

DR. R. L. SHAEFFER, of Allentown, owns the highest producing cow in the Lehigh County Testing Association for the year ending March, 1925. Her name is Bonny Maple Grant Application. She is a purebred Holstein cow and during the association year produced 16,194 pounds of milk and 556.7 pounds of butterfat.

Dr. Shaeffer's experience in building up his herd has many points which will be of value to others who are endeavoring to improve their herds. He says, "I started to assemble a herd three years ago and had the usual misfortunes that others have who try to assemble a purebred accredited herd. I am now on the accredited list, however, and will receive my certificate in the near future.

Tells How He Started

"I bought cows with records. My senior herd sire I bought from the Luzerne County Poor District, after he had taken first prize at the Allentown Fair.

"My junior herd sire is out of Maple Lane Beryl Fayne, one of my cows that gave eighty pounds of milk daily on two milkings for two weeks after freshening. I had her bred to King Echo Pietje Model owned by the Belle Meade Bull Association, and so got my junior herd sire, a very typy animal.

"I am very much pleased with the work done by the cow testing association and have benefited greatly. Thru the records I was able to pense with the cows which did show a profit for the year."

Dr. Shaeffer's herd yields fr sixty-five to seventy-five gallons Grade A milk daily which is sold the hospital. In former years t hospital experienced considerab trouble in getting good milk f babies and operations. This p lem greatly interested Dr. Shaeff since he was surgeon in chief at t hospital. Finally he purchased farm near Allentown in order produce a superior quality of m for hospital purposes.

Plans for the Future

At the present he still has a f grade cows that are good produ but on the whole he feels that pu bred cows are much better. He pects in the near future to raise own cows entirely and dispose of t remaining grade animals in the her

His plan for securing an un ly high class sire for breeding pu poses is unique and further emp sizes the importance of cow te associations to provide individ records on each cow in the herd of bull associations to provide h class sires.—A. A. B.

Fitting for the Fairs

DAIRYMEN who are planning show cattle at the fairs next for the first time will find some teresting pointers on fitting in following recommendations by J. Bartlett, professor of dairy hu ry at Rutgers University.

All animals to be shown should placed on a fitting ration at two months ahead of their first A mixture of equal parts of meal, ground oats, linseed oil and wheat bran is used. During two months the animals are kept bled, as they put on flesh faster, a harder fat, and are freer from annoyance than when on pa They are blanketed in a light w blanket, and if turned out at all is at night.

Milking cows should fresh about twelve hours after the of the show, if they are to appear their best. Where more than one is entered, the animal should pointed for the largest. In case cow cannot freshen immedia after being shown, she should bred to calve about ten days bef so that she may become filled up

Animals Taught How to Pose

At least one month before the f show, all animals should be trai to lead and pose at the traine command. The animal should taught to keep all four f squar placed under its body and hold head high when posing.

Clipping should be done as n show time as possible, unless animal has long hair; then it may necessary to clip at the beginning the fitting period and again bef the show. If blanketed, few of older animals will need any clipp at all. Horns and hoofs should scraped and polished. Tails sho be washed with soap suds a bleached with peroxide of hydrog the night before showing. It is w to braid the switch while wet a tie it up over night. When loosen and brushed in the morning it w show a wavy appearance. Animals the show circuit should not be green food, as it will have a t dency to cause scours.

Why Rachel Beat Them All

Her Owner Puts Sound Principles into Practice

MR. H. J. GRAY, Honey Grove, holds the distinction of having the highest record cow in Juniata County Cow Testing Association for the year ending March 31, 1925. Mr. Gray's registered purebred Holstein cow, Rachel, completed the year with a record of 17,943 pounds of milk and 636.8 pounds of butterfat. This is over four times the production of the average cow in Pennsylvania.

The methods which resulted in this excellent record made under ordinary farm conditions will be of interest to every dairyman in the state.

Few Good Purebreds before 1919

Mr. Gray states that up until the time the cow testing association started in April, 1919, there was very little improvement made in the feeding, breeding and management of his herd or other better herds of Juniata County. There was a purebred here and there but they were only inferior purebreds, and very little attention was given to feeding and breeding.

"I believe I would be justified in saying that the cow testing association has been responsible to a great extent for the progress that has been made among its memberes in this county. Information secured from the tester and the interest stimulated by the records has paved the way for purebreds. It has shown farmers that purebreds pay better than grades, and that high grades pay better than scrubs.

Some of Rachel's Achievements

"I started with purebreds in the spring of 1919 when I purchased K. P. A. P. Rachel Pietertje No. 488414 from Susquehanna County. She was a granddaughter of King Segis Pontiac Alcartra 79602, a bull that had 122 A. R. O. daughters, and a great granddaughter of King Segis Pontiac with 194 A. R. O. daughters. She was carrying her first calf when I bought her and she freshened December 9, 1919, with a heifer calf. From then until March 31, 1920, she made 4798 pounds of milk and 160.4 pounds of fat and a profit above cost of feed of $80.43.

"I have had six calves from her, four heifers and two bulls. Three of these heifers are in milk. I sold one bull for $100 and the other for $75. The fourth heifer will be fresh this coming fall.

"The three heifers that are fresh have dropped six calves, three bulls and three heifers. One of these heifers is fresh and doing fine. I now have seven female descendants from this cow and she was only seven years old on September 17, 1924. I hope to have a good sized herd of purebred Holsteins in the near future from this, my foundation cow. These heifers are all from our bull association sires, each of which has a high producing dam.

"The record that this foundation cow made in the association during the year just past, 17,943 pounds of milk, 636.8 pounds of fat, and $194.99 above feed cost, was under very ordinary conditions. She was fed from April 1 to August 1, on a commercial dairy feed and from then until freshening time on a fitting ration of one part each of corn, oats and bran. She received about seven pounds of hay per day and was on poor pasture.

Conditions Merely Ordinary

"From October 20 to five days after freshening she was fed nothing but wheat bran and from then until April 1 sixteen pounds per day of a ration consisting of one part each of corn, oats, bran, cottonseed meal and oil meal with about fifteen pounds of timothy hay per day and nothing more. She was milked but twice a day, and had no extra care."

Mr. Gray attributes his success in dairying to regularity in feeding and milking, feeding a well balanced ration, breeding to a good purebred bull, raising the calves from the best cows and weeding out the poor producers which show up in the herd book kept by the tester in charge of the testing association.

These are good, sound, common sense business principles in dairying which would bring success to almost any man that would put them into practice. Mr. Dairyman, if you are not satisfied with the returns from your herd this past year, why not adopt the principles that are bringing the greatest success to others?—A. A. Borland.

New Zealand Cuts Butter Costs

NEW ZEALAND is fast becoming one of the greatest dairying countries of the world. Being able to sell all the butter and cheese she could produce in the great markets of Europe, she has doubled her production in the last ten years, and may double it again in the next decade.

Dr. Theodore Macklin, of the University of Wisconsin, who has been studying dairy production in New Zealand for his own institution and the United States Department of Agriculture, has this to say about dairying as it is carried on on the opposite side of the earth:

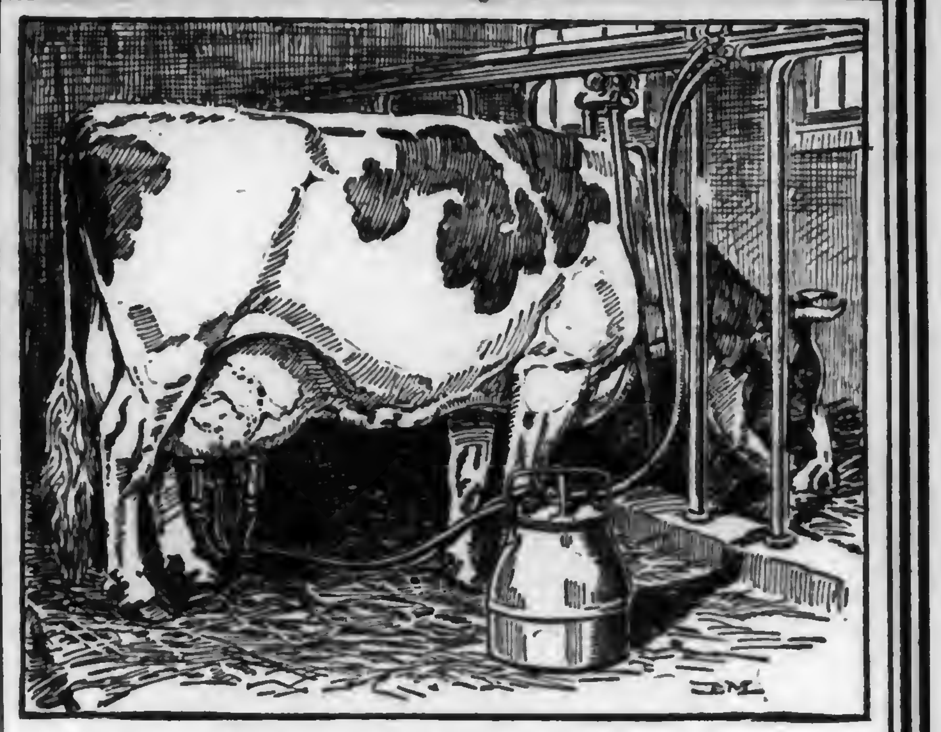
Pasture the Year Around

"Conditions under which production is carried on in New Zealand permit low cost of production. Nature has been good to the dairyman there, and due to the equable, mild climate, abundant rainfall, and combination of soil, topography and cheaply obtained fertilizer, a large output of butterfat per acre is realized without the strenuous effort required in continental regions of the corresponding latitude in the Northern Hemisphere.

"Twelve months of pasturage for cattle is the rule, and investment in barns is not required. About half of the cows are milked by machinery. The milking machine has come to stay in New Zealand and is doing there for the dairyman what the binder has done for the wheat grower in the United States. A small milk shed is constructed to house the machinery as the cattle are not housed in barns.

Man and Boy Milk Fifty Cows

"The milk shed is generally equipped with a four-cow plant. A man and a boy with this equipment can easily handle from forty to fifty milking cows. Gasoline is commonly used for power, but with the rapid introduction of electricity for rural use, this type of power is beoming popular on account of the reduced cost and convenience. Conservative estimates of the farm cost of producing butterfat indicate that the cost in 1924 was not more than two-thirds as great as in Wisconsin."



Whether you have 5 or 500 Cows there is a

De Laval Milker

For your needs and purse

WHETHER you have 5 or 500 cows or more to milk, there is a De Laval Outfit exactly suited for your needs and purse. More than 25,000 De Laval Milkers in use prove that they soon pay for themselves in saving time and labor, increasing the quantity and quality of the milk, and by making dairying more pleasant and profitable.

A De Laval Milker will save you at least $20 per cow per year. You will find a De Laval easy to own, easy to operate and easy to pay for. It will please both you and your cows and your only regret will be that you didn't get one sooner.

De Laval Milker Outfits sold for $175.00 and up, depending on the size of herd

EASY MONTHLY PAYMENTS

A small payment down (from 10% to 25%) will put a De Laval Milker to work for you. Then the easy monthly payments can more than be met by the savings it makes for you. See your De Laval Agent or mail coupon below for full information.

GLOBE SILOS

Merit proved by time

TWENTY years and a Globe Silo is still in service. Why? They are built of the finest materials—spruce and fir. Heavy matching walls, double splines, sealed joints and adjustable doors make them absolutely air-tight. Not only now, but a generation from now. The extension roof makes a Globe Silo the cheapest per ton capacity—an exclusive Globe feature. Increases value of farm. Durable, convenient and profitable—these are the time-proved merits of a Globe. Write today for catalog and price-list; silos, tanks, ensilage cutters, stanchions, etc.

GLOBE SILO CO.
Box 8 Unadilla, New York

Power in Plenty from Fordson or other Light Tractor to fill any Silo with Dick's Blizzard Ensilage Cutter
Models Blizzard Ensilage Cutters
Write for Free Book

Owners of Fordsons and other light tractors are extremely well pleased with Dick's Blizzard. For example, they say: "Can run Blizzard to capacity with throttle half open." "Filled our silo 12 feet x 36 feet in 7 hours." "Handled corn exceptionally well even when we lapped bundles." "Can handle 12 tons per hour." "Sixteen silos filled without expense other than oil and fuel."

The FREE BOOK cites dozens of users' experiences. Describes fully the two Blizzard Models, R-211 and R-133, with Paddle Roll Self Feed, that do great work with light tractor power. Both are big values. Also describes the four other Blizzard models, ranging from the small L-18 that runs on 4 1-2 h. p., to the giant S-21, which cuts 35 tons per hr. on 9-10 in cut. **WRITE FOR BOOK TODAY.** Find out why Blizzards "Do most work per h. p.", "Are lightest running", "Elevate highest", "Longest lasting", "Safest to operate", "Do finest work." Also describes "Famous" Feed Cutters, for hand and power operation. Widely used by poultry raisers. Chopped feed makes more eggs.

My Playmates

My little brother is six years old and our dog is five years old. The dog likes to play and when we give him a stick or something he will run with it and then he wants us to try and catch him but sometimes we can not. His name is Bubbles.

I suppose you think that is a funny name for a dog, but my brother was just little when we got the dog and he ran around so fast that he thought Bubbles would be a good name for him. We have had our dog ever since he was a pup.

My brother has on his dad's pants, cap and boots. He likes to fish and sometimes he catches big ones.

First Prize

MY PLAYMATES.
Bernadine Guillaume, Lycoming Co., Pa.

Cousin Ruth, I don't think I can find a nicer playmate than your Billy Boy. He sure is a pretty baby.—Bernadine Guillaume, Lycoming County, Pa.

Dear Cousin Ruth and Forum Friends:—I am fourteen years old. My two oldest brothers are farming and my oldest sister is living in Bellegrove.

I received a certificate for perfect attendance at school last year and am getting one this year. I am going to Annville High School this fall I have three miles to go. I was sick in bed. I had the measles. Quite a number of people had them around our home.

I am sending a few riddles.

1. When should you loose your temper?

2. Which candle burns the longest, the one burned by day or the one burned by night?

3. What is the best way to make a slow horse fast?

4. On which side of the church does a yew tree grow?—Edna A. Fortna, Lebanon County, Pa.

Dear Cousin Ruth and Forum Friends:—I have never joined the Forum but am going to do so now so I can be in the contest that is on for the thirtieth. I am sending a picture of myself, two little brothers and our pets, cats included Don't you think they are cute? We have great fun feeding them and they would follow us all over the farm for a drink of milk.

I wish I had gotten in on the bird contest for we study about them in school and I have learned a lot about birds.—M. Eloise Dorand, Chester County, Pa.

Dear Cousin Ruth and Forum Friends:—Our school closed May 22 and we had a very sociable time. Some of us recited, then we had cake and lemonade, and our teacher treated us all to ice cream.

Third Prize

MY PLAYMATES.
Mary Eloise Dorand, Chester County, Pa.

OUR YOUNG PEOPLE'S FORUM.

We have thirty children in our little school and ten out of this number were neither late nor absent during the whole term and have from one to one and a half miles to walk to school.

I was eleven years old in February and am in seventh grade. I have gone four consecutive years to school and have not been late nor absent. My cousin, Howard Kienzle, is nine years old and went three years without being late or absent. We all received presents from our teacher. He has taught in our school five years and we hope he comes back again.—Minnie Stuckel, Atlantic County, N.J.

Dear Cousin Ruth:—I am sending you a picture of myself, my pet dog, Tippy, and my pet cat, Topsy.

I have about eighty-five little chicks to feed morning and evening. My sister Agnes' school will soon be done. There is a ground bird nest out along the road with five little ground birds in it.—Helen Goughler, Venango County, Pa.

Dear Cousin Ruth and Forum Friends:—I will be thirteen in July. Maybe you think I am big but I am not. I am little and only weigh fifty-four pounds. Ha! Ha!

I live on a farm and like it very much. Our farm has 150 acres in it. I am going to float our buckwheat. It will be the first time I ever floated.

I found your cake recipe, Helen, and I made a cake. It turned out very nice for me. We like it.

I have one sister, Bernice, and one brother, James. Oh! I almost forgot school was out the 5th of May.—Beatrice Ameigh, Bradford County, Pa.

Dear Cousin Ruth:—I am fourteen years old. I live on a ninety-two-acre farm. We have two mules, one horse and fourteen cows which are milking very well. We ship our milk to Philadelphia and just now we are sending 170 to 180 quarts per day. We also have a nice bunch of young stock.

My father has twenty-one acres of corn planted and a large patch of potatoes. We have eighteen acres of wheat, which looks fine, and twenty-two acres of beautiful clover.

My school closed on the first of May. I passed for the seventh grade. My sister passed for the fifth. I have four brothers, two of them will start to school next fall. We also have 300 little chicks and 250 hens. I like to gather eggs, but I don't like to milk as the cows might kick me. I like housework best of all. I have two nice little kittens; they are so cute.—Jessie M. Hawkins, Bucks County, Pa.

Dear Forum Friends —I am nine years old. This is my first letter. We have about 280 chickens and get about 200 eggs a day. For pets I have a lamb whose name is Jack. I feed him on a bottle. I also have a heifer. We have two lambs and nineteen old ewes and three cows. I drive them to pasture every morning.—Harold Stains, Huntingdon County, Pa.

Dear Cousin Ruth and Forum Friends:—I thought I would write and tell you what I saw going to the store the other day. It was a baby pheasant and its mother. The little baby pheasant ran under a leaf to hide from me. The mother pheasant ran up into the woods and made a funny noise.—Anna Smith, Butler County, Pa.

I was much pleased with the many snaps you sent in for the contest and tho only three will receive prizes I'm going to use several others on our page whenever they'll squeeze in between the letters.

Second Prize

MY PLAYMATES.
Margaret A. Kauffman, Lebanon Co., Pa.

Don't be worried if pictures you asked to have returned don't put in their appearance right away. They'll arrive safe and sound, sometime.

Very soon I'm going to announce another contest. Watch for it, particularly you boys. I want to hear from a lot of you next time.

COUSIN RUTH.

OUR LITTLE FOLKS PUZZLE CORNER

DEAR LITTLE FOLKS:—This week's puzzle has to do with colors. You will find in each of the sentences in the little square the name of a color, if you will look carefully at the letters. Naturally, you can find the word "yellow" in the last sentence.

When you have searched out the letters which spell the names of the colors—one in each of the lines—send them to me on a POST CARD so that they reach me by June 20. BE SURE TO SAY HOW OLD YOU ARE. [illegible] sending in the correct answer, whose cards are the best in grammar, spelling, punctuation penmanship and general appearance, will each be awarded a prize.

Address all replies to the PUZZLE EDITOR, PENNSYLVANIA FARMER, 261 SOUTH THIRD STREET, PHILADELPHIA.

Puzzle Prize Winners

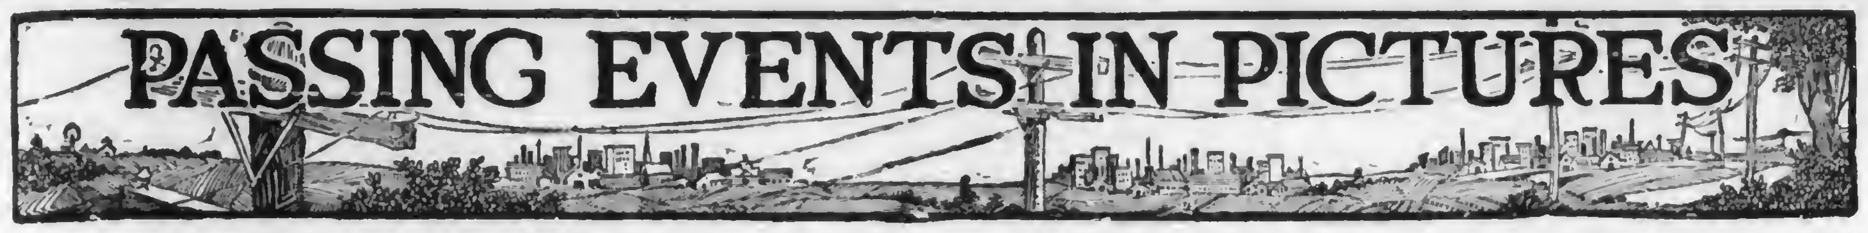
The answer to the puzzle published in May 23 issue of Pennsylvania Farmer is: THE PEN IS MIGHTIER THAN THE SWORD.

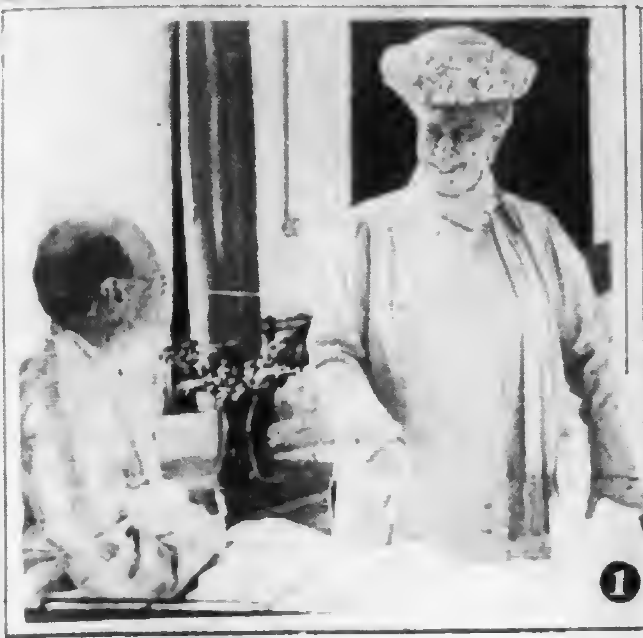
The prize winners are: Regina Burgoon, age 9, Summerville, Pa.; William Elleker, age 12, Hermudiar, Pa.; Ruth M. Good, age 10, Li[illegible], Pa.; Josephine Jarrell, age 16, Greensboro, Md.; Kimber Opp, age 8, Muncy, Pa.; Mary Redman, age 11, Centreville, Md.; Benjamin Somers, age 7, Denton, Md.; Samuel S. Stauffer, age 11, Beartown, Pa.; James Edward Weikert, age 9, Gettysburg, Pa.; Lucy Witherow, age 6, Fannettsburg, Pa.

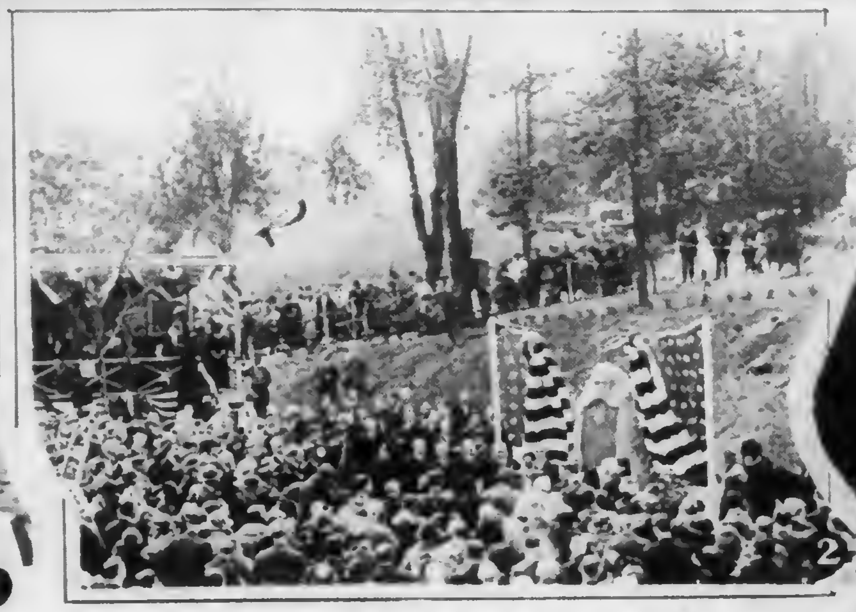
The prize was a silk American flag

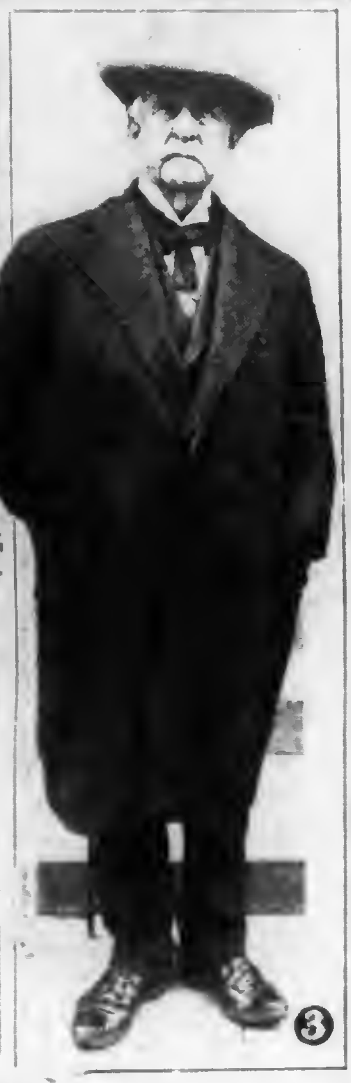
This tub lacks water
A pin knows its own point
The bow hit every time
A long ray of light shone out
The ogre entered his castle
The tomato ran gently down
Our editor has a farm
We saw Bob Lu eating a clam
He said he'd yell "O" when ready

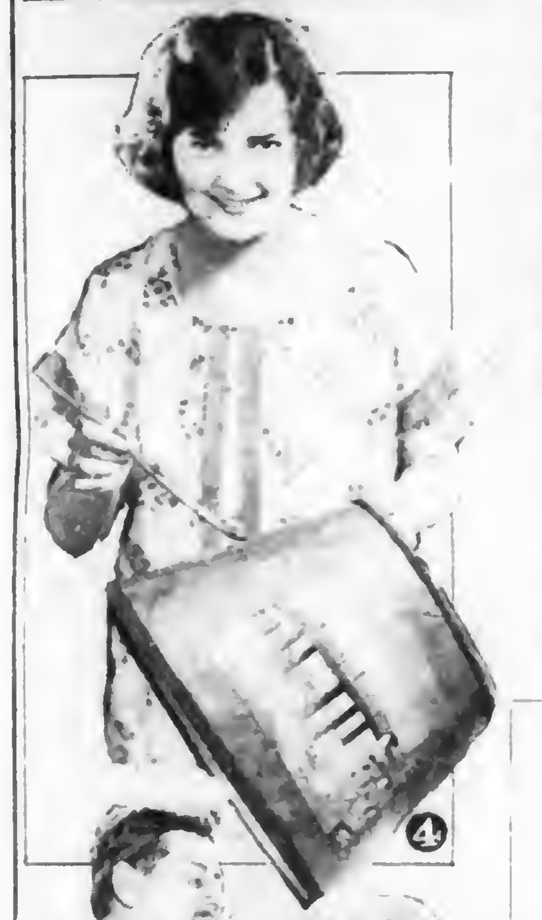
PASSING EVENTS IN PICTURES

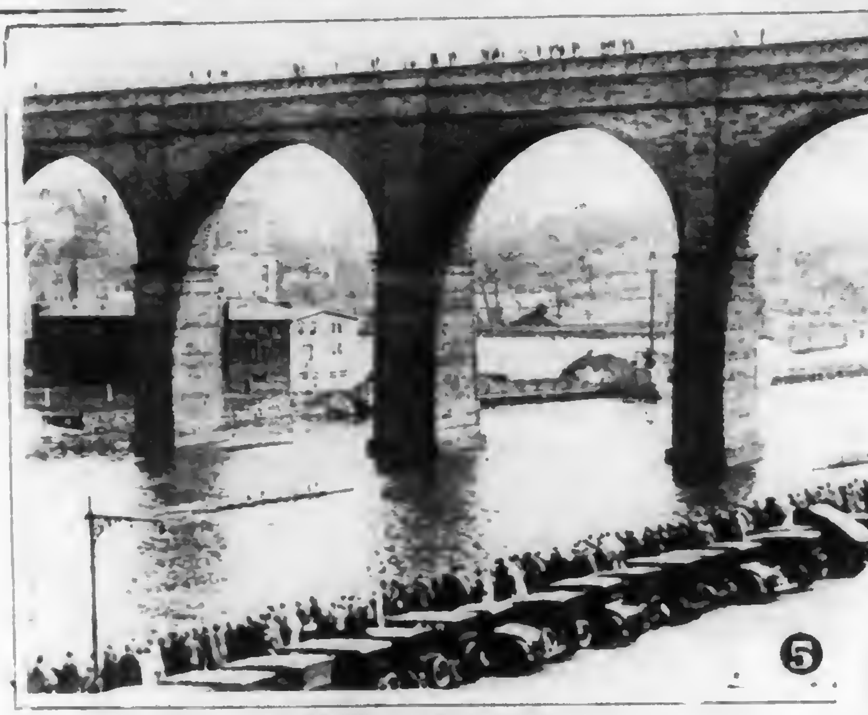


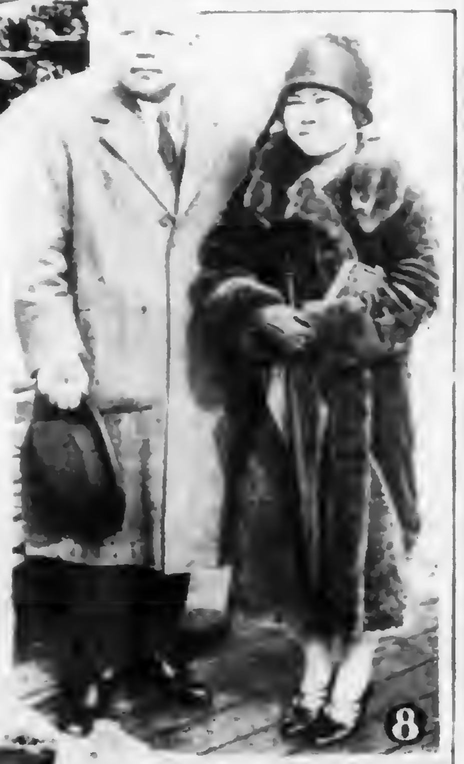


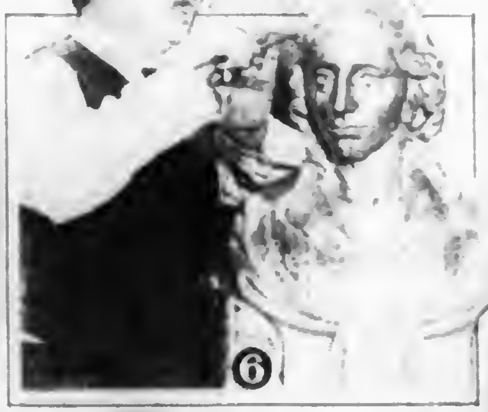


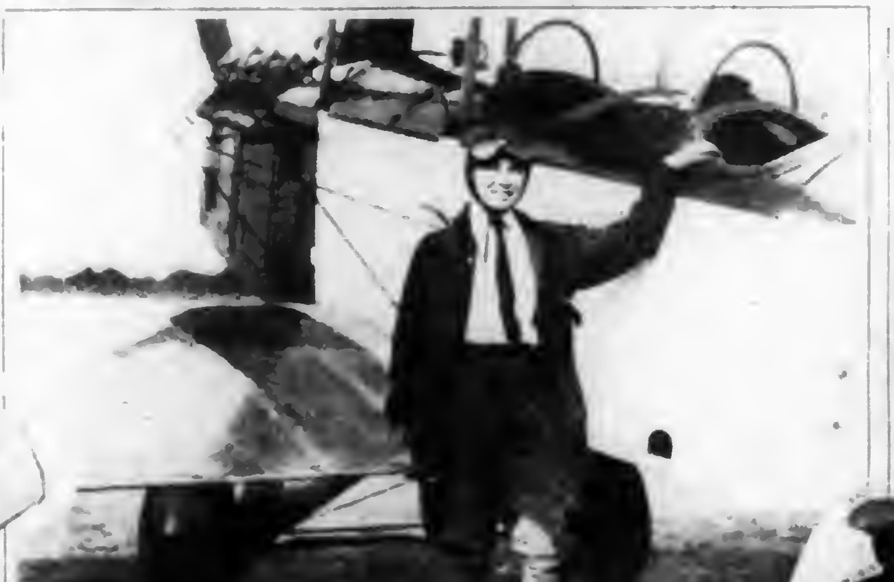


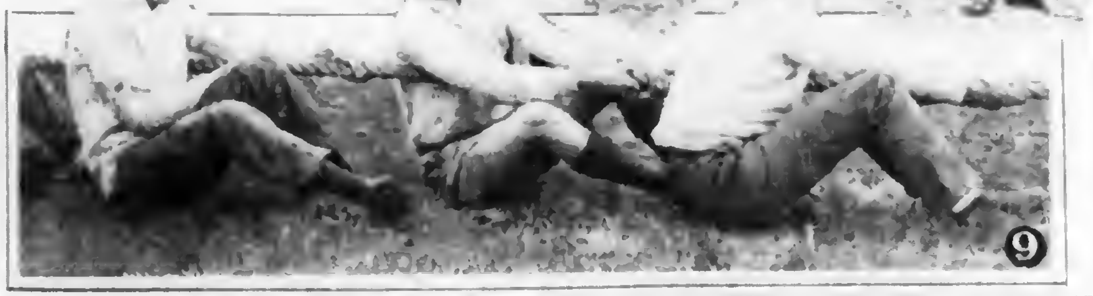


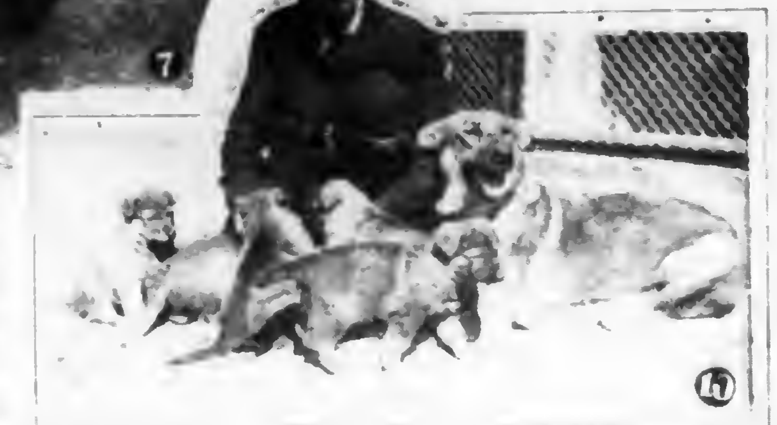












(Copyright by Underwood & Underwood)

1.—The smile that cheers—Queen Mary, of England, in a round of hospital visits.
2.—At Menlo Park, N. J., where a tablet to the early achievements of Edison was recently dedicated.
3.—Last picture of General Nelson A. Miles, taken the day before his death as he left the Army and Navy Club in Washington.
4.—Finishing up a lamp shade made of wrapping paper, plus a Japanese print.
5.—The race between Choate School freshmen and Columbia University freshmen as the rivals passed under old Highbridge over the Harlem River.
6.—Putting the final touches to a cast of Brenda Putnam's bust of Harriet Beecher Stowe, which was placed in the American Hall of Fame.
7.—A New Orleans society girl makes her social calls in an airplane. She expects to tour Europe in her machine.
8.—Crown Prince and Princess of Siam on a tour of this country.
9.—The old time "tug of war" at Eton College, England.
10.—German police dogs—the Berlin Railway will train them to guard property.

OUR HOME PAGE

Mrs. IDA S. HARRINGTON

Keep the Old Homestead

Don't Give Up the Best Just for Something New

SOMETIMES, in our desire for something new, we deliberately follow in the wake of the moving van, giving up one home for another,—perhaps only to be sadly disappointed. Had we taken stock from a sane viewpoint, we should have known that we were much better off where we were, even if it was only an old-fashioned brick house, years and years old. What possibilities these treasures from Colonial days present!

Ordinarily, the farm houses of fifty to seventy-five years and longer ago are better than present-day buildings for at least two reasons, more and better material was available, so that one's choice was not so limited, and labor was cheaper and more plentiful.

"Remove not the ancient landmarks."

And these houses have their own distinctive features, impossible to duplicate except at large expense. If, in addition, your farm house, attic, or shed contains old-fashioned painted furniture, rugs, dishes, pictures and other quaint things, you are indeed blessed. They require only a bit of refurnishing for delightful results.

Don't Abandon the Old House

If you are discouraged, tempted to abandon the old house, don't do it unless absolutely necessary. Even if beaming and ceiling are insecure, or a sill or two defective, replacing them is not likely to cost more than moving and refurnishing another house. And the new house will, even then, not be your old home in its own setting of familiar fields, forest and orchards. Take another look at it. Let the good man of the house decide to make the needed repairs that are within his sphere. Help further the work, zealously guarding the quaintness,—paneled and carved woodwork, stair cases, built-in cupboards, presses and shelves. Keep even the tiny-paned windows. They are so distinctive these days.

These most important features attended to, woodwork comes next. Thoro scrubbings, smoothings with graded sandpaper, often disclose old woods that need only a coat or so of self-color stain, or paint if preferred. Keep to quaint old designs in wall-papers. Designers everywhere seem to be going back, copying every available scrap of old wall-paper and obtaining remarkably good results.

Old pieces of furniture may be re-cushioned, covered with plain denim or the lovely cretonnes, at slight cost. Paint other chairs, beds, stands and dressers with light gray, delft blue, sage green or black, with small painted-in fruit or flower designs, and the result will be (if nicely done) furniture that commands exorbitant prices in city furnishing shops.

The other day I read of an old floor redeemed by laying down a certain brand of roofing composition, kept in place with special furnished large nails. The whole was then painted,—black, I believe. If your floors are not as far gone as this, restore them by staining or painting. Use as many coats as necessary to cover well. Cover the floors as you will; prettily colored rag rugs, nicely made, are lovely, and there are some beautiful quiet designs in modern rugs.

And curtains,—nothing is quite so pretty as crisp white ones, the ruffly ones for bedrooms, perhaps. Somehow they, with the usual dull green blinds, provide most fitting finishing touches to the old farm house.

Old houses, old things, ancient landmarks, must have appealed to Solomon, the wise, in those days when he entreated folk to "remove not the ancient landmark which thy fathers have set."

Let us lovingly keep these old houses, that have had such a "lot of livin' in," that repect the charm and quaint beauty of days that we know only by tradition.—G. S.

Old furniture has a distinct charm of it's own.

Mixed Jams

Each of the following recipes makes about ten large glasses of jam, according to the size of the fruits used.

STRAWBERRY SPREAD

- 2 quarts strawberries
- 2 cups cooked rhubarb
- Juice and pulp two grape fruit
- 1 tablespoon grape fruit rind
- Rind and juice of one lemon
- 5 cups sugar
- 3 chopped apples
- 1 cup seeded raisins

Wash and crush the berries, cover with three cups water. Add the rhubarb and other fruits, cooking long and slowly until well blended and tender. Add the sugar half an hour before the jam is finished. It should be quite thick.

• • •

APRICOT JAM

- 6 cups stewed apricots
- 2 cups mashed figs
- 1 cup strained honey
- 3 cups sugar
- 4 cups shredded pineapple
- 1 teaspoon whole cloves, tied into cloth bag

Soak the dried apricots and figs overnight and stew as for sauce, unsweetened. Add the pineapple, honey and sugar and cook slowly till thick. Allow the bag in which the cloves are sewn to remain in the jam while it is cooking but remove before filling glasses.—E. M. P.

More Papering Hints

I LIVED in just such an old-fashioned house as you describe, Mrs. H. K., and it had always been white-washed. I washed the walls in strong vinegar and papered the bedrooms, and the paper stuck.

The ceiling in the kitchen was scaling. We scraped it with an old discarded handsaw, then washed it with vinegar and papered it, using glue in the paste in proportion as directed by our Home Page Editor, Mrs. Harrington, and it stayed tight and smooth.

A Good Selection

If you will get a ceiling paper called "ice" (white ground scattered over with satiny flakes) you will find it easy to put on. It requires no matching. For your bedrooms choose a white background with a fine narrow stripe of feathery flowers and leaves. Blue would be nice for the small bedroom, as blue gives an impression of space.

I would begin on the small room. Paper the ceiling, and then run your side stripes about a foot onto the ceiling. If the lower walls are five feet high, cut your strips six feet. Measure and mark where the ends are to come. Place each end evenly along the mark and smoothe down with a wide soft brush. Then cut a banding of the stripe and paste along the edge where ceiling and sides meet. The result will be a canopy effect and I am sure you will be delighted with it.—Mrs. E. A. Kern.

In Busy Seasons

NEARLY every country housewife has seasons of the year when she finds it impossible to get all the work accomplished. At such times a neat and orderly house is a wonderful help toward keeping the nerves calm and preventing unnecessary fatigue.

I find it pays to study how to reduce the dusting as much as possible, especially at hurried seasons. First, I put away all bric-a-brac, pictures and whatever will increase the work of dusting.

To Simplify Matters

A vacuum cleaner will do more toward keeping down dust in the house than anything else. A clean carpet-sweeper used daily to keep the rugs presentable will raise little unnecessary dust. Brushing up the surface litter with a slightly dampened brush and a long handled dust pan is quickly done and postpones the day of more energetic cleaning.

Most helpful of all is searching out the spots that especially show the dust. Every room has such places,—a polished table, a cherished buffet, the top of bookshelves. Try covering these surfaces, during the busy season, with something that does not show the dust. It is surprising how much longer the rooms look presentable if these polished surfaces no longer glimmer thru a shroud of dust. There will remain plenty of time during the year to enjoy the polished surfaces when dusting them will not seem such a burden.—Alice Margaret Ashton.

Letters We Like to Get

Dear Household Editor:—In reply to your letter, I have received the government bulletin and thank you very much for your trouble in getting it for me.

In regard to the books you mentioned, it happens that I have been given a copy of "Getting Ready to Be a Mother" by Carolyn Van Blarcom.

Thanking you again.—W.

Sickness at the Neighbors

When You Offer Help Make It Count for the Most

IT IS proverbial that sickness never goes unnoticed among country neighbors. Sometimes, however, our best intentioned services are not as helpful as they should be.

Taking one task entirely off the overburdened mother's shoulders is the greatest help, often times, that can be rendered. When oil lamps were used for illumination in our home, a thoughtful neighbor helped me beyond words by coming in each morning, bringing her own clean towels and cloths, and carefully cleaning and filling all the lamps. When lamps are burned all night as they are during severe illness, they are empty and soiled by daylight. What a help to find them bright and shining when darkness returns!

When all the neighbors "bake and take in" the result is generally a feast or a famine. "I'll put up the children's school lunches," one thoughtful woman offered. She asked a few questions as to the children's preferences and their mother's requirements on the lunch question and that was the last that mother had to think about school lunches until the sickness was over and she had had a few days of sorely needed rest.

If You Can't Leave Home

One kindly neighbor can always be depended upon to do the washing for any afflicted family in her locality. "I have an electric washer, plenty of water and a convenient laundry," she always says. "I can do the washing when I would find it impossible to leave home to help."

"I'll come in each evening and wash dishes," offered a mother who could not leave her small children during the day. Well, wasn't that a wonderful help? It was not a great hardship for her, yet it meant that every night the kitchen was set in order and the table arranged for breakfast; only one who has spent an anxious and broken night can realize just how grateful this assistance was.

When there are children too small to be of service, taking them away for a little visit helps wonderfully.

There is one rule it is always wise to observe in case of neighborhood sickness. Never, if you can help it, take anything to the sick home which you wish or expect to have returned. Food presented on delicate dishes and covered with elaborate linen which must be carefully looked after and returned is very little help to a harassed housewife. Place doughnuts, cookies and bread in clean paper bags. Paper plates and boxes lined with waxed paper will safely convey cakes, pies and many other edibles.

Don't Ask, Do Something

During bad weather, when it is difficult to dry clothes, it often happens that the ordinary household linen is insufficient when there is sickness. What a comfort then is a gift of old sheets, pillowcases, towels and night garments that may be used up and discarded with no thought of returning.

Never make the mistake of going to the house of sickness to stand about and ask: "What can I do to help?" Choose something you can do and do it regularly. Be ready to answer a call for help. And you may feel certain that you are doing your part to help the neighbor who is afflicted.—Alice Margaret Ashton.

Trouble with Fern

Dear Pennsylvania Farmer:—As I am a reader of Pennsylvania Farmer, I thought I would write to you. I have a lace fern which I have had about a month, and it is starting to die and dry up. First the bottom dies then the top. I keep it in the sun all the time so I am at a loss to know what to do for it. I have tried almost everything I have heard of without success. I thought perhaps you would know and tell me what to do for it. I should feel awfully disappointed if it should die, as it is so nice and big.—A Subscriber.

Ferns are naturally shade loving plants. Notice the ferns in the woods wherever you go, and you will see that the choicest ones are those which grow in the shade. This is true of all ferns in their native haunts. The lace fern, if you mean the variation of the old favorite Boston fern which has long feathery lacy fronds, is a greenhouse product and was grown in a rather cool house under a glass roof, but shaded from the direct rays of the sun.

Common Pots Are Best

So take the fern out of the sunshine, give it a shady corner on the porch if you have one, if not, put it on the north side of the house or at a north window. I would not change the dirt unless the fern is in a fancy glazed jar. If it is, take it out and repot it in an ordinary unglazed flower pot. The roots of plants need air and water drainage which they cannot get in the fancy jardinieres.

Nor should a fern, potted in a common pot, be set into a jardinere. Florists tell me that this is one of the surest ways to kill a fern. If you repot, get, if possible, real woods dirt. It is better than any soil or fertilizer you can buy.

See that the fern has water enough but do not let the water stand in the saucer of the pot. Give it a shower bath once a week unless it is out of doors where the rains can sprinkle it for you.

Another thing, ferns like to be let alone. Select the place where you think it will thrive best, cool, shady and airy, and then don't move it. Don't even turn it around. If it must be moved for its weekly bath, return it as nearly as possible to its former position.

Ferns Should Not Be Disturbed

The lace fern is a sport of the old Boston fern, and may surprise you by producing fronds which are quite plain and unruffled. I have one which I bought last December which is showing quite a tendency to "revert to type." These coarser fronds I cut out, hoping to stimulate it to produce the more feathery ones for which I bought it.

Of course there is a chance that something else is the matter with your fern, but the suggestions I have made ought to save it.—Orra Parker Phelps.

To Fry Ham

I HAVE fried ham for fourteen years and I discovered only recently that ham can be fried so that it is much more delicious in the oven than on the top of the stove.

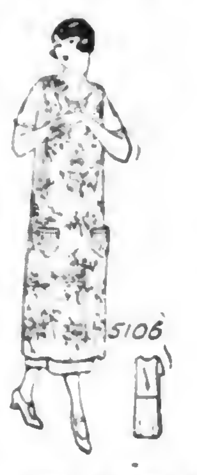
I have crisped my bacon for a long time in the oven, but it did not occur to me to fry ham the same way.

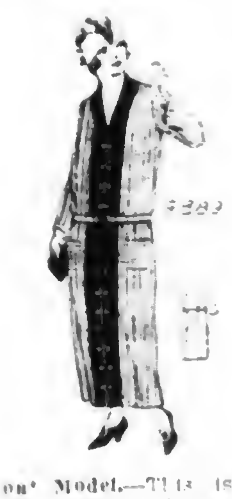
This does away entirely with splattering the top of the stove, there is no smoke in the house from the frying meat, and the fat is crisp, while the lean part does not fry hard but is more tender than when fried on top of the stove.—May H. Mumaw.

For Mother and Daughters

Directions for Ordering.—Give figures and letters of each pattern exactly as printed at beginning of each description. Give bust measures when ordering waist patterns, waist measure for skirt and age for children's patterns. Address Pennsylvania Farmer, 261 S Third Street, Philadelphia, Pa.

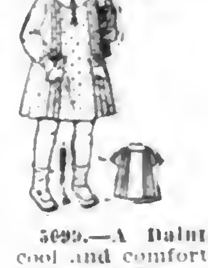
5106.—A Simple Apron.—The waist portion of the back is fastened to the front of the apron, and holds it securely in place. This style is good for percale, gingham, drill or rubberized cloth. Four sizes: small, 34-36; medium, 38-40; large, 42-44; extra large, 46-48 inches bust measure. A medium size requires 2¼ yards of 36-inch material. Pattern, 10 cents.

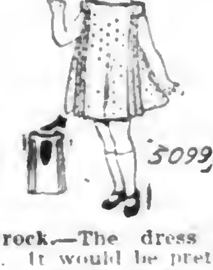




4889.—Stylish Stout Model.—This is a good model for satin, crepe or [illegible] Roshanara crepe with satin for collar and panels would be very attractive. Eight sizes: 36, 38, 40, 42, 44, 46, 48 and 50 inches bust measure. A 38-inch size requires 1⅞ yards of one material [illegible] inches wide. If made as illustrated [illegible] yards of striped or figured material. The width of the dress at the foot is two yards. Pattern, 10 cents.

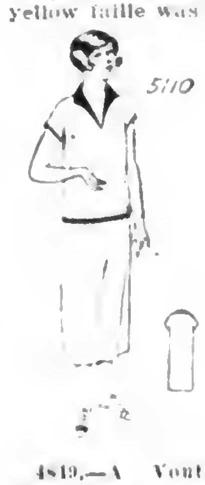
4855.—With Picture Pockets.—Dotted percale or Swiss, with collar of linen or organdy, could be used for this style. The "elephant" pockets will please the little girl who chooses this model. The sleeve may be in wrist or short length. Four sizes: 2, 4, 6 and 8 years. A four-year size requires 2⅝ yards of one material 36 inches wide. To make as illustrated will require 2⅓ yards of 36-inch material and one-half yard of plain material. Pattern, 10 cents.

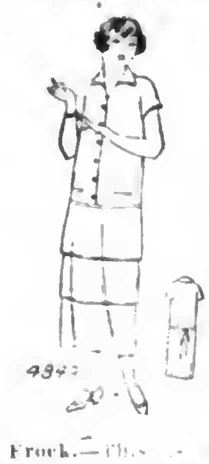




5099.—A Dainty Frock.—The dress is cool and comfortable. It would be pretty in dotted Swiss or in linen, or in any of this season's pretty materials. Four sizes: 2, 4, 6 and 8 years. A four-year size will require 2¼ yards of 32-inch material. Pattern, 10 cents.

5110.—A Simple Model.—Tub silks are attractive for this design. It is also good for flannel, kasha, linen, and rep. Three sizes: 16, 18 and 20 years. An 18-year size requires 3¾ yards of 32-inch material if made of one material. If made as illustrated, the facings and belt will require one-quarter yard of contrasting material. As pictured white taffeta with facings of yellow faille was used. Pattern, 10 cents.





4819.—A Youthful Frock.—This is a good model for slender figures. It is suitable for alpaca, linen, jersey and crepe, also for flannel and taffeta. Four sizes: 14, 16, 18 and 20 years. A 16-year size requires 3¾ yards of 32-inch material. The width at the foot is 1½ yard. Pattern, 10 cents.

The Stove

By *Marjorie L. C. Pickthall*

"I'LL be back the third day at latest with the doctor. I've left you wood enough for three days and more and you've grub for a month." Garth looked at her anxiously; his strong mouth twitched. Suddenly he leaned forward and brushed her cheek lightly with his yellow beard. "I—hate to leave you little girl," he said, with a gentleness not common with him, "but I guess it's Derek's only chance."

"Of course you must go. It's Derek's only chance." Dorette faced him steadily. She was pale, slight, sleepy-eyed, but wilderness born and bred, for all that; one guessed a spirit of steel in that fragile sheath. She finished wistfully: "There'll be nothing for me to do—nothing, but—wait."

"Only look after yourself and keep the stove up."

"I'll do it. And you—if you meet Maxime . . . ."

Rage blazed suddenly in her brother's eyes. The barrel of his rifle gleamed blue as he gripped it. "If I meet Maxime," he said, thru his teeth, "it's a finish for him or for me!"

He turned about without another word, and swung down the forest trail on his long run to Mandore.

Dorette watched him until he was no more than a dark shadow among the heavy blue shades that hung from spruce to spruce like tangible banners. All life, all sound, all motion seemed to go with him. Mile after mile, she knew, on each side of her was nothing but the same silence, the same stillness, league after league of the desolate fir forest of the North. She went into the cabin and bolted and barred the door behind her, as if the solitude were an enemy which she must keep out.

The cabin was a pleasant place. The walls were sheathed in red cedar, and there were fur rugs on the floor, red curtains at the windows. In the center of the larger of the two rooms into which the cabin was divided stood the great iron stove, in winter the source of their very life.

Its voice filled the cabin with a roar like the forever unsatisfied roaring of the wind and sea—a hungry voice. Dorette swung open the heavy door, wincing from the furnace-glory within, as she flung on more wood. That was her one occupation until Garth came back—feeding the stove.

She went to one of the bunks—like the bunks of a ship—that were built on the wall behind the stove, and looked in.

DEREK, her younger brother, lay there without motion, as he had lain ever since the sergeant of police and Garth had carried him in and laid him there. He drowsed between life and death, shot thru the body. Now and then he swallowed a little broth, but with no knowledge of the hand that fed him. She dared not touch him. There was nothing she could do for him but keep the cabin warm enough to sustain that flickering lamp of life till the doctor came, for the cold of that country kills like a sword.

Suddenly, slinging to the side of the bunk, she trembled. "If only you could speak to me, Derek," she whispered. "If only I could hear your voice!"

But the only voice was the voice of the great stove.

Her mind painted for her the scene she had not witnessed—the hard men of the mines and the lumber camps, still men with formidable eyes, following Cain's trail from Fort Dismay to Anisette; the end of the trail at a little lonely shack blinded in snow, ringed with watchful men; Derek pleading that Maxime might have "one more chance, boys!" the parley at the door, the shot coming from nowhere; men storming into the shack over Derek's fallen body, and finding it empty; Maxime Dufour escaped again! She saw it all. Heard again Garth's voice in hard-breathed sentences between shut teeth: "But he's not goin' to get away again. He'll have to get food and shelter somewhere; and if it's a thousand miles away, we'll follow and shoot him down like the wolf he is!"

She glanced round, pale and shaken, thinking that still she heard that deep voice of bitter rage. But is was only the undertone of the roaring stove humming its angry song.

SHE busied herself about such duties as she could find. Twice she fed the stove from the pile of wood on the floor. The fierce heat licked out at her each time, just as a savage beast will strike thru the bars of his cage, and each time she shut the door with the sense of prisoning some lion-voiced living thing.

Her work was soon done. Everything in the cabin was tidied and tidied again. She glanced at the clock. Only an hour of the slow time had gone. Garth had only been gone an hour. She turned the clock with its face to the wall, took out a shirt she was making for Garth—red-and-black checked flannel, thick as felt—and stitched resolutely.

Her hearing, accustomed to the sound of the stove, as the ear adjusts itself to the thunder of a waterfall, was acute to catch the faintest noises. She heard the tiny sound of the thread passing thru the flannel, the soft thud of snow slipping from the boughs of the forest, the least check and stumble in Derek's shallow breathing. Each time she heard this last, her own heart checked and stumbled in tune with it. She held her own breath till her brother's renewed its weak rhythm.

So the morning passed. In the afternoon, she found a snowshoe that needed re-stringing. Deftly as Montagnais she twisted the gut and wove the net.

It was dark sooner than she could have hoped. She needed no lamp. The stove filled the cabin with its glow. In the dark it became a beautiful and formidable thing, a shape of dull red, with a heart of lambent rose. She glanced at the little windows, sheathed thick with frost-ferns. It would be a cold night. Her thoughts went to Garth, then with dread to Maxime Dufour. She dragged her cot from the inner room, set it across the front of the stove, and lay down. The warmth was like a hand pressing on her eyelids.

With the subconscious watchfulness of those who care for the beloved, she was awake five times in the long night to feed the stove. Each time she looked at Derek, and thought, with a pang, that he was deeper sunken among the pillows. His eyes were not quite closed; the silvery line of eye ball reflected the red glow. She would have liked to close them, but her hand shrank from so prophetic an action.

The last time she woke the sun had risen. The gathered crystals on the windows were lit with a glow that paled the stove. Dorette went into the inner room and braided her hair.

That day passed as the first had done. Her brother was weaker. She pleaded with him, passionately tender. "Just a mouthful of soup, Derry. Wake up, Derry dear. Take it for my sake, Derry!" but her voice, which had dimly roused him the day before, could not reach him now. She looked round for something she might do for him.

The diminished heap of logs on the floor showed her work enough. She must bring in a fresh supply from the pile behind the cabin. She ate a hasty breakfast and made herself some coffee. Then, hooded and wrapped against the cold, she opened the door.

She stepped into a world of white, blue, and black; solid, translucent, and motionless as tho built from gems. Where the blue sky touched the black trees there seemed to run a setting of gold; where the black trees trailed branches to the snow, was a stain of sapphire shadow. It was fierecely cold. She shut the door behind her, hastily, ran to the snow-buried wood pile behind the cabin, burdened herself with an armful of small logs, returned, set her load on the threshold, opened the door, and tumbled the wood on the floor. All the morning she worked thus. Her spirits rose; she began to believe that Derek would not die, and soon she might think of Garth's return. The noise of the logs as she flung them on the floor pleased her. It was a change from the one unceasing voice that filled the cabin day and night—the voice of the stove.

THE second night she was restless. She dared not sleep at first, for fear she should sleep too well. Wind came up with the stars; the great stove sang to a higher, more tremendous note! She could scarcely keep pace with its consuming hunger. The pine knots and bright birch logs fell to ash in a moment. If she slept, she dreamed that the stove was out, and the cold creeping into the cabin in long feathers of frost, that twisted under the door like snakes, until one touched her on the throat and she woke, choking.

Dawn found the sky fleeced with cloud, the cabin warm, and the hurt man yet alive.

Again with the day her heart lightened. Four—five hours from that time, and she might expect Garth with the doctor from the mines at Mandore. She wound the clock, and turned it with its chipped white face to the room, no longer dreading to tell the passage of the hours.

Yet five hours went, and Garth had not come.

She went to the door. Closing it behind her that the cold might not get into the cabin even for a moment, she stared down the trail. It ran in the straight no more than a half mile; farther than that, she could not see. Yet it was less her eyes than her soul that she thus strained to see beyond the forest.

"Garth! Garth! Garth!"

Who had given that wild cry that rang among the trees? For a moment she wondered, then knew it had come from her own troubled heart.

She must see beyond the first bend of the trail; she must see if, farther than that, the blue-white ribbon between the trees was still empty of her hope.

She built up the fire again, put on coat and hood and snowshoes, took one glance at Derek, and left the cabin. She sped down the trail. She was panting when she reached the first curve. Almost afraid to look, she saw the long track before her—empty. There was something conscious and deliberate in that emptiness, as if the forest knowingly withheld from her a secret. She dared go no farther. She turned back and fled home.

The clock ticked off another hour—two, three, four. Garth did not come.

Darkness, and he had not come.

LONELINESS and suspense were shaking her strong nerves. The worst of all was the silence. The voice of the stove became first an annoyance, then a weariness, then an intolerable burden. The voice of its devouring hunger was the very voice of silence, of desolation. She flung the wood angrily. "If there was only someone to speak to," she said a little wildly—"just someone to give me a word!"

There was no one—then, nor thru the endless night, when she feared to sleep, lest, in her dreams, or in reality, that insatiable thing in the stove that kept them alive might escape her, nor with the stormy dawn. Garth did not come.

There was no wood left in the house. Before she did anything else, she wrapped herself and went to the wood-pile.

The wood-pile was heaped against the back of the cabin; it was roofed and sheeted with snow. She pulled at the butt of a log, and the wood came down with a run, mixed with much snow—such dry snow that the wood was not moistened until she held it in her warm hand. The bitter work was a relief to her. She thrust the soft, dark hair out of her eyes and piled herself such a load that she swayed under it. "But it's something to do for Derek," she said, wistfully. "It's all I can do."

She took in enough for the day. But there was the night.

"Garth will be back by then," she muttered, with cold lips, staring at the stove.

"Garth must be back by then." The stove sent a screaming rush of flame up the pipe, as if in mockery. She felt an unreasoning hatred for it, as she went wearily out again to gather enough wood for the night too.

She thrust in her arm to the shoulder. She met no resistance but that of the snow.

Her heart beat in shuddering throbs. She brought a long pole and prodded the pile, then swung the pole and leveled it. She found nothing but snow.

"How did it happen?" She heard herself asking this over and over. Easily enough. She or Garth or Derek had been drawing supplies from the other side of the pile, and the snow had slipped from the roof and filled the spaces; hardening, it had stretched a roof over emptiness. The pile, which had been taken for good, hardwood logs, fodder for that roaring hungry heat within, was no more than a heap of snow.

Dorette turned slowly, and went into the cabin.

She stood by Derek's bunk, staring at the wood on the floor. It was enough for the day, but what of the night?

Would Garth return before the night?

She looked about the cabin. There were things there, things that would burn. Her sleepy brown eyes widened. There was war in them as she leaned and kissed Derek's cheek. He did not stir from that deepening sleep of his.

"Sleep on, Derry," she whispered, scarcely knowing what she said. "Sleep well, Derry. I'll take care of you. I'll fight for you!"

SHE took Garth's heavy ax, and began on the chairs.

They were heavy and clumsy things, Garth's pride, since he had made them himself. They would feed the stove well; but they were hard for a girl's arm to chop, even tho she struck true as a woodman, and Dorette's hands were scorched from the door of the stove. As she toiled, her eyes ranged the cabin, calculating on this box, that shelf, the table. Her heart beat to every sound. As the wind rose higher, the bitter day was full of sounds. A dozen times she ran to the door, crying, "Garth!" A dozen times she saw nothing but the forest and a driven mist of snow, as fine and dry as dust.

By the earliest dusk she had chopped up everything in the cabin. Each stroke sent a jar of pain to her shoulder from her burned and bruised hands, but she did not feel it. And still the stove roared, insatiable. The dried wood of their furnishings, pine for the most part, burned like straw. The great iron horror must be fed, and she had nothing to feed it.

She took the ax and went out.

The grey forest fronted her in a rustling drive of snow and shadow. There must be a hundred fallen boughs within range of the cabin. She found one, dragged it from the snow, and toiled with it into the house. She twisted it apart, desperately, and there was blood on the tough broken stuff she thrust into the stove.

She went out again. She was growing more desperate as her strength failed. There was a great branch trailing from a spruce, and she tore and wrenched at it, but it would not yield—it was frozen. She swung her weight upon it, sobbing. She struck with all the force remaining in her, but the ax-blade turned in her weary hands. She felt as tho the will in her, passionately strong, should sever the bough as by steel. She did not know she was beaten, until she slipped weakly and fell in the snow and lay there, wailing helplessly and softly as a child.

The bitter snow stung her face like heat—like the heat of the stove. If she stayed there, the stove would be out. She lifted herself to her knees, and saw in the growing dark a man, who stood with a rifle on his arm, looking down at her.

"Garth! Oh, Garth!"

But even as the cry left her lips, she knew it was not Garth.

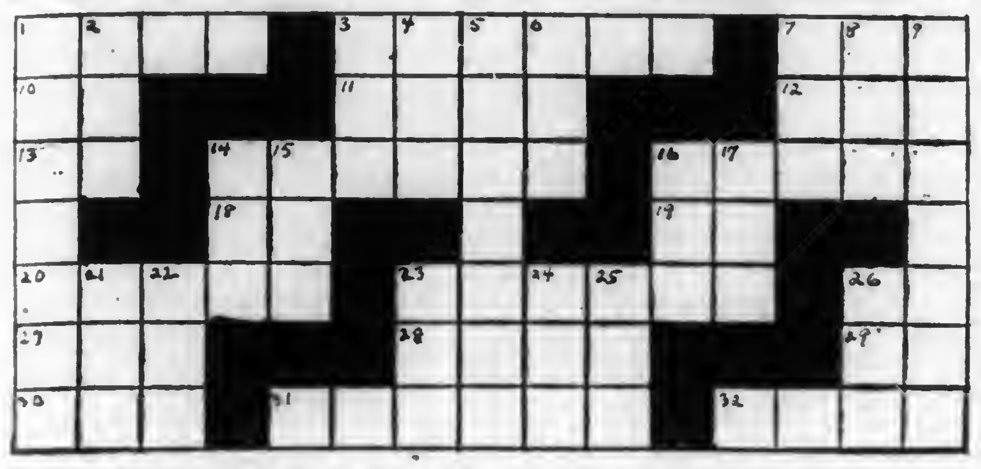
Our Weekly Cross Word Puzzle



TO SOLVE this puzzle, fill the white squares with letters forming the words defined in the list below. For example: 28 (across) is IRAN and 9 (down) is ODDMENT. You may begin anywhere in the puzzle. Follow the definitions carefully, and, by noting letters common to two words, you will soon have a clew to help you. The solution of this puzzle will appear in an early issue.

READING DOWN

1. Bird trained for hunting, plural
2. The unit of electrical resistance
3. Basket, abbreviation
4. A playing card marked with a single spot
5. Where plays are performed
6. A number
7. State which has but three counties, abbreviation
8. Latin prefix meaning "one"
9. An odd thing, one that is left over
14. The country you live in, abbreviation
15. Latin prefix meaning "not"
16. A bag
17. The boat in which the first recorded menagerie was transported
21. The Chinaman's pigtail
22. Letters standing for "and so forth"
23. Intention or direction
24. What the sun does to our skin
25. An insect noted for its industry
26. Flat part of a grate on which things may be kept warm

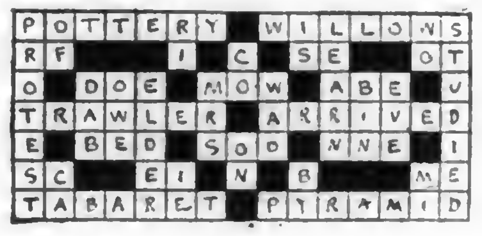
32. What one owes

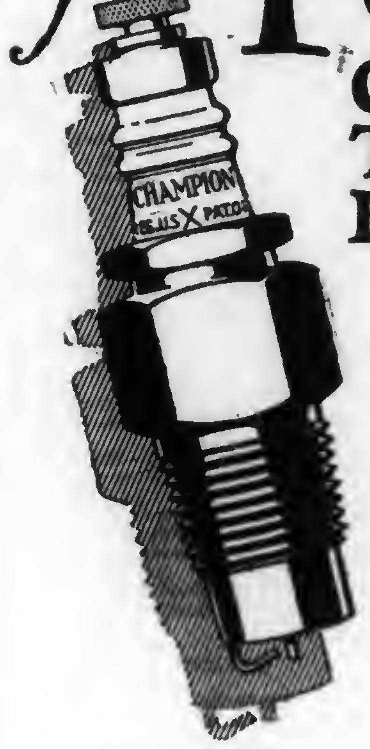
LAST WEEK'S PUZZLE ANSWER



An "eating competition" was organized in a mining town in the north of England. One competitor, a giant collier, six feet in height and broad in proportion, succeeded in disposing of a leg of mutton, a plentiful supply of vegetables and a plum pudding, washed down with copious drafts of ale. He was unanimously declared the winner, and was being triumphantly escorted home, when he turned to his admirers and said:

"Eh, lads, say don't hee say nowt of this to my old woman, or she won't gie me no dinner!"—The Continent (Chicago).

for Ford Cars~ Trucks~ Fordson Tractors 60¢



Champion X is the standard spark plug for Ford Cars and Trucks and Fordson Tractors.

For more than 13 years Champion spark plugs have been regular equipment on Ford Cars and Trucks and on Fordson tractors since they were introduced.

This is a striking tribute to Champion dependability because no organization insists on higher standards than the Ford Motor Company.

Champions aid Ford engines to deliver the very best service. A new set at least once a year is real economy because they save their cost in oil and gas and improve engine performance.

More than 95,000 dealers sell Champions. Champion X is 60 cents. Blue Box for all other cars, 75 cents. You will know the genuine by the double-ribbed sillimanite core.

You Can't Milk a Fly-Pestered Cow Dry

She retains the last—the richest.

That's why your milk always tests lower in butter-fat during fly-time.

Dr. Hess Fly Chaser

—has the odor of the pines

Pleasant and healthful to folks, but repelling to flies and mosquitoes.

Remember, Dr. Hess Fly Chaser is the fly chaser with a kick.

It's the odor that does it.

It does not taint the milk, gum the hair nor blister. It is most economical to use. A single gallon will last the average farmer all summer.

Unconditionally guaranteed.

If Dr. Hess Fly Chaser does not prevent the milk slump, make your cows milkable in fly-time, save your horse-flesh all summer long, it will not cost you one cent.

43 per cent cottonseed meal	49.75
34 per cent linseed meal	48.75@50.25

For Baltimore, Cumberland and Williamsport rate points, subtract 25c per ton (for cottonseed meal 40c per ton); for New York, Newark rate points add 40c per ton (for cottonseed meal 60c per ton); for Woodbury, Bridgeton rate points, add $1.00 per ton; for Freehold, Toms River, Cape May rate points, add $1.40 per ton.

Heavy demand, light production. Prices advancing.

Blair County, Pa.—There was a very high wind on the twenty-third and the thermometer registered about ninety degrees all day. The following day it rained and in the higher sections snow and sleet fell. The corn is nearly all planted, but growing very slowly. Wheat and oats are doing nicely. The fruit in some places is damaged by frost. Pastures are good. Wheat sells for $1.75; oats, 50c; corn, $1.30; hay, $20 a ton; straw, $15; eggs, 25c. Some farmers are plowing for wheat.—H. E. H., May 27.

Bradford County, Pa.—On May 24 we had a three-inch fall of snow. The corn crop is now mostly planted. Few potatoes being planted this year. Oats and wheat doing nicely. The outlook seems to point toward a large hay crop. Young chickens doing nicely. Cockerels selling at from 35c to 40c. Butter brings 48@50c.—G. E. F., June 2.

Cumberland County, Pa.—May 23 was the hottest day in nineteen years, and May 25 the coldest day in the history of the local weather bureau, the mercury registering thirty-eight degrees at eight o'clock in the morning. Farm crops are looking fine, especially wheat and grass. Corn about all planted. Some farmers are complaining about cutworms working in the corn. Thru the efforts of County Agent Paul L. Edinger a quince club was organized with over 100 members. Cherries will be but a half crop and peaches and apples seventy-five per cent of a crop. Farm labor is more plentiful at $25@30 per month. Hogs and pigs are scarce; farmers are raising more chickens than ever. Eggs, 30c; butter, 50c; lard, 20c; milk, $2.75; wheat, $1.50; corn, $1.25; oats, 60c; hay, $15.—A. L. B., May 30.

Fulton County, Pa.—The prospect for a hay crop is very poor at present; pasture short, quite a lot of the early sown wheat will be almost a total failure owing to the fly. Corn in general has a very poor stand; oats are looking fine. There has been more than the usual number of baby chicks bought in the county. Spring pigs very scarce. Fruit crop will be almost a total failure, with the exception of a few varieties of apples, for the reason that not as much spraying has been done as formerly. Eggs, 25c; butter, 32c; lard, 18c, bacon, 22c; pigs, $5; potatoes, 80c.—T. H. T., May 25.

Juniata County, Pa.—The outlook for an average grain and hay crop in the county is good. The recent cold weather has retarded the growth of the corn. Virtually no peaches will be produced this year and the sweet cherries will be a total failure. Altho wheat got a poor start last fall there will be an average crop. Oats are in good shape since recent rains; it is predicted that the crop will be harvested three weeks earlier this year than usual. Twelve herds in the Juniata Cow Testing Association averaged more than 300 pounds of butterfat for the year ending March 31. Wheat $1.75; eggs, 28c; butter, 40c.—C. B. L., June 1.

Lackawanna County, Pa.—Meadows are looking good. Oats not quite all sowed. Winter grains frozen out in spots. The early truck crops of corn, tomatoes, and potatoes were frozen on the night of the 26th. The 23rd was unusually hot, followed by severe thunderstorms; it turned cold with a light fall of snow on the morning of the 25th. Several times during May ice froze one-quarter inch thick. Where I have examined the early fruit I find more damaged. Eggs, 40c; butter, 43c; early potatoes, 5 lbs. for 25c; strawberries have been 25@35c qt.—E. A. K., May 31.

Lebanon County, Pa.—The clovers and alfalfa in most places have made excellent growth; wheat is heading; prospects are for a good crop. The heavy frost of May 25 damaged the early planted corn and garden vegetables. Some of the early planted potatoes are ready to be sprayed. [illegible] this spring. It seems the baby chick business is growing in this county. Wheat, $1.70; corn, $1.20; potatoes, 75c; butter, 50c; eggs, 30c.—P. L. M., June 1.

Lycoming County, Pa.—Vegetation of all kinds has been springing forward with a speed almost visible to the human eye. New potatoes are selling at from 5c to 8c per pound; the old crop raised here is nearly a thing of the past. Eggs, 30c; butter, 50c; hay at barn, $14; pressed, $19; veal, hog dressed, 14c per pound.—C. L. C., June 2.

Montgomery County, Pa.—The rain of last week banished fears of a short hay crop. Oats showing up well but wheat still looks rather ragged. Almost all corn is planted but complaints of very uneven germination are heard. Fruit prospects are fair but strawberries will be about one-half a crop. The cow testing association was reorganized the first of the month with several new members. Some cows still being shipped in, good beef animals are in demand. Pigs are also scarce. Wheat, $2; oats, 70c; potatoes, old, 90c; bran, $2; gluten, $2.20; oil meal, $2.75; dairy feeds, $2@2.50; timothy hay, $14; veal calves, 12c; chickens, 28c; eggs, 36c; butter, 55c.—C. N. D., May 28.

Snyder County, Pa.—Oats and clover look extra fine due to frequent rains. Corn slow in coming up. Fruit prospects are below normal. Milk production is well maintained. The milk business is being put upon a basis on a par with the Standard Oil Company, so far as transportation, trucks and volume handled, go. The dairy farmers see money in this branch and push it vigorously. Old corn scarce and commands $1.25 with prospects for a sharp rise.—W. K. M., May 30.

Sullivan County, Pa.—We have had frosts nearly every night; the 25th saw a slight snowfall. Just now the weather is warming up. It is feared that nearly all fruit is frozen. Oats and winter grains are doing nicely. Corn does not look so good. Many farmers are plowing for buckwheat. Pigs are very scarce. Many farmers are selling butter. Potatoes, 50c; butter, 42c; eggs, 28c; beef, 15c.—M. G., June 1.

Tioga County, Pa.—On May 23 Tioga County experienced the hottest weather of any May 23 on record, and May 25 was the coldest May 25 on record,—a drop of fifty-two degrees with snow all over the county. Many electrical storms, accompanied by high winds, have caused much loss, and also many fires have occasioned severe losses. Farmers are losing heavily on their potato crop as potatoes have been sold here recently at 30c per bushel. Eggs, 28@30c; butter, 45@52c.—C. B., May 29.

Warren County, Pa.—An unusual amount of frosts in May. Early apples, peaches and pears all gone; strawberries almost all gone. The late varieties, such as Big Late and Big Joe, were hurt the most while the Premier seemed to be injured the least. Potatoes peeping thru the ground and corn up. Oats looking good. Farmers have their work three weeks ahead of last year. Bees swarming early. Crows are getting so bold in some localities that they pick up chickens right at the doorsteps. A convention of the county Sunday schools will be held at Warren on June 5 and 6th. A county picnic for all Sunday schools will be held at the fair grounds on June 25.—H. C. J., June 2.

Lancaster's Tobacco

BUYING of the 1924 crop of Pennsylvania tobacco is about at an end. The wind-up of the movement of last year's tobacco was marked last week by the belated delivery of several crops to Lancaster warehouses—probably the last deliveries to be made this year.

Prices during the last several weeks have fallen to the lowest scale for many seasons, considering the quality of the leaf. While it is true that the best crops had been taken during the early buying movement, much good tobacco was sold at extremely low prices. Many growers, hard pressed to move their 1924 tobacco from their stripping quarters, were forced to sell at the buyer's price which ran from 10 cents down to 5 and 6 cents per pound.

Planting is going on apace, and much of the 1925 crop is already in the ground. The threatened reduction in acreage will in all likelihood fail to materialize to a sufficient extent to radically lower the normal planting. It is doubtful whether the 1925 crop will be cut more than five per cent below the 1924 acreage.

Slight Reduction in Acreage

The first direct approach to the grower in the move to organize a cooperative marketing association in this section was made today with the mailing of a letter to the more than 7000 tobacco farmers who will be solicited for support in the project. The organization committee states that it aims thoroly to inform all growers of the fundamentals of cooperative marketing before the drive for members is started.—Garden Spot Farmer, Lancaster, June 4.

Fat Cattle Show

AT LANCASTER'S annual Fat Cattle Show the grand championship in Classes 1 and 2 was won by M. H. Hoffman, of Landisville, Pa., with his pen of sixteen Herefords.

The grand championship in Classes 3 and 4 was won by M. Metzler, of Mt. Joy, who entered seven head of Aberdeen Angus.

J. A. Smith's Aberdeen Angus won top place in the class for single fat steers.

There was a special baby beef class, in which the Chester County Boys' Baby Beef Calf Club exhibited their animals. Gale Martin won first prize in this class on his Hereford steer.—T.

IF THE LIGHTS DIDN'T, WHAT DID?

(Continued from page 3)

Whether or not Mr. Weatherby's electric light trap venture is successful, publication of the article in your columns may have a tendency to cause dust to fly from the heels of some entomologists in order that they may be able to keep pace with a practical eighty-year-old farmer.

Since the infestation of the moth science seems to have accomplished very little, while the ravages of the pest are growing greater each year. In 1923 my orchard showed a very small attack while in 1924 the infestation was heavy. I believe from my observation that in general most all the orchards in this section showed the same ratio of attack.

Something Caused Decrease

Just what caused the decrease in attack in Mr. Weatherby's orchard last year is a question in my mind. It must have been due to either the light venture, the natural enemies of the moth or his method of cultivation. If it were natural enemies all peach growers should have witnessed the same effect. If his time and method of cultivation had been the same in the years 1923 and 1924 then I could not believe that there would be any decrease in attack.

Mr. Weatherby's plan of combating the moth is an experiment and needs more years to form a definite decision. The idea is sound enough if the moths and not too many of its enemies are attracted to the lights. I did not observe his fruit at picking time but I am quite sure he has given facts.

I admire his courage to make so extensive an experiment, and believe the entomologists would do well, rather than condemn his experiment, to accept his invitation to visit his farm, and have a chat. It might be that their knowledge of the research work and Mr. Weatherby's original mind will do wonders for the peach grower.—A. L. Gaventa, Buttonwood Farm, Swedesboro, N. J.

Less Moth Injury

REPLYING to your letter will say that Mr. Hurff Weatherby is carrying on an experiment in his orchard with electric lights that is surely of interest to fruit growers. The Oriental moth is getting to be a very serious pest and as near as I can determine the entomologists as well as the growers are at a loss to know just what methods are best to combat it. And it may be that Mr. Weatherby has hit the right thing. One year is not sufficient time to prove anything along that line positively, but the fact remains that Mr. Weatherby had much less injury to his fruit last year than did most of the rest of us who did not have lights. Whether the lights should have the credit for this I am not prepared to say, but from what I know of Mr. Weatherby I am sure he is absolutely sure himself that the lights were responsible, otherwise he would not be using them again this year.

Puts Younger Men to Shame

As stated by your correspondent, Mr. Weatherby is a man getting along in years, but when it comes to downright interest in his work, faith in the business of growing crops, originality of ideas and then the grit and determination to work out his plans, he puts many, many of us younger fellows to shame. I count it a privilege to live near such a good farmer and fruit grower as Mr. Weatherby and I expect to keep a close watch over this light experiment this year. Perhaps there is a lot more to it than our entomologists think.—Willard B. Kille, Trucker and Market Gardener, Swedesboro, N. J.

Examined Many Orchards

THE cold weather of this spring has not delayed the apearance of the Oriental moth to any extent in the peach orchards of Gloucester County. A trip thru some of the largest orchards in the vicinity of Swedesboro, Mullica Hill, Glassboro, Franklinville and other towns showed that the moth has made appearance and was at work in the twigs of the trees. The outstanding fact of the investigation was the difference in the amount of damage in the various orchards visited. In some orchards as many as eighty per cent of the trees showed twig injury, while in others the number was as low as eight to ten per cent.

The Hurff Weatherby orchard that is under lights showed up less injury than any other one visited. However, where we found the twig injury in the Weatherby orchard, it was further advanced than anywhere else. This can probably be ex-

NEW LONDON HATCHERY, Box PF., New London, Ohio

If Lights Didn't, What Did?

(Continued from page 21)

plained,—the soil in the Weatherby orchard is very sandy and probably warmed up earlier than any of the other orchards visited.

In the Weatherby orchard, the lights are being used nearly every night and will be continued regularly just as soon as the weather moderates a little more. They were turned on about May 15 and were used ten nights during the rest of the month. Mr. Weatherby now feels that they should have been turned on sooner. Large numbers of moths of all kinds, bugs and beetles are being caught in the pan. As many as 300 were counted in one of the hundred or more pans in the orchard. I can't say that there was a single Oriental Moth in any of the pans inspected.

Large Number of Moths Caught

This brings us to the point of difference over the efficiency of the bait pans and the lights in catching the moths. It seems to be almost impossible to find any two men, scientists, orchardists or spray experts that are united on the exact description or the identification of the moth. One orchardist will tell one thing and the next man will tell something else, both claiming to know the moth on sight. From observations and interviews among the many orchardists in the county, the men carrying on the experiments are somewhat divided as to the exact indentity of the moth.

On this recent trip thru more than 200 acres of orchards, we made observations on the following points: age of trees, method of cultivation, pruning, spraying or dusting, thinning of fruit, cover crops, and the use of gas in destroying borers and any special methods followed by the different orchardists.

In practically ever case, we selected men who are good orchardists,—men who leave nothing to chance. Mr. Weatherby is no exception; he is second to none in orchard management. We are convinced that Mr. Weatherby devotes more time and care to his orchards than any other man in Gloucester County. The tractor and the double disc harrow figured in nearly every orchard visited. Mr. Weatherby has been using the tractor for about ten years, and cultivates early and late making about eight cultivations a season. His cultivation is probably more thoro than the average and he practices clean cultivation. The use of gas is universal for the borers and all treat in the fall. One farmer thinks it would be a good idea to work paradichlorobenzene into the soil to kill any moths that might be wintering over in the ground. He suggested spreading it broadcast and working it in the ground with a double disc harrow or some other similar implement.

All Were Good Orchardists

The greatest variation in orchard management is in the spraying of the trees. These farmers are divided into two groups and are following these methods with equally good results in controlling the other pests that infest the peach orchards. Mr. Weather is a very strong advocate of the use of sprays at all times in the orchards, while most of the other growers interviewed are using the different dusts with satisfactory results. Five to six applications are made on all the farms visited with both the dust and the liquid sprays.

Lime sulphur is used in most instances for the dormant spray. Mr. Weatherby applies an additional spray or a wash to the limbs, trunks and especially to all rough places on the bark of a strong solution of lime sulphur in the fall. This is applied in the fall or early winter when other work is not pressing. The use of dust is on the increase and those men using it are doing so because it saves so much in labor and time over the wet sprays.

Our investigation does not disclose any one factor or practice that gives Mr. Weatherby any advantage over his neighbors in the control of the Oriental moth,—unless it is the lights or his good orchard management plus the lights and the bait.

The outstanding point at this time is the small amount of damage to the trees in comparison to his neighbors. We can find no other element that can account for the small number of infested twigs unless the lights have played a part. Mr. Weatherby is thoroly "sold" on the idea of lights. He told us, "This plant and equipment cost me $2500 before a light was turned on, and after one year's experience, I would not sell it for $10,000 if I could not get another plant to take its place or get lights from some other source. Tell your readers not to buy a plant until after this season and see if we get as good results in 1925 as we did in 1924. This is only an experiment and it should be tested out before it is taken up or recommended."

Offered to Replace Infected Fruit

"Last year," says Mr. Weatherby, "I offered to replace any basket of fruit in which the buyer found a peach that showed any Oriental moth infection. I sold about 50,000 baskets and not one came to ask for a replacement. In all the solid carloads which we shipped, we did not have one complaint, and our brokerage house told me that every car of fruit which he sold for us was accepted without a complaint."

Every orchard visited reported more damage in 1924 than in 1923, with the exception of the Weatherby orchard which was under lights and the bait traps.

In his interview with a neighbor who does not grow peaches and is noted for his unbiased opinions, we gathered a testimonial that should have weight, especially while the moth control is still in the experimental stage. He said, "Mr. Weatherby has always been a leader in new ideas and the growing of improved varieties. He has always been a pioneer, and if a thing did not make good or was not adapted to the Swedesboro conditions he soon dropped it and usually one year was enough to convince him if it could be grown successfully. In every case his judgment has held true by continued experiments among the farmers in this territory. There must be something to the lights if he continues them for the second year."

In conclusion, our observations lead us to give Mr. Weatherby the benefit of any doubts as to the merits of the lights. He has backed up his idea with good money and feels that he has made a profitable investment.

Mr. Weatherby is now working on a line of experiments to control the small amount of twig injury in his orchard. He is still experimenting to find some method of control that will be cheaper than the lights. Despite his nearly eighty years of active life, he has a vision of solving this perplexing problem. Until some better method of control is found, the lights should receive serious consideration. The experts in the investigations of the moth have no definite remedy to offer the fruit grower that is much more conclusive than the lights.—Amos Kirby

Veterinary

Conducted by W. C. Fair, V. S.

Advice thru this department is free to our subscribers. Each communication should state history and symptoms of the case in full; also the name and address of writer. Initials only will be published. We cannot make reply by mail. This is one of the most valuable columns of the paper and we invite readers to make use of it. Clippings from this column, when properly preserved and classified, make one of the most valuable medical symposiums a farmer-stockman can obtain.

COUGH.—I have a cow eight years old that has a cough; she has had it for three or four months. She is in good flesh, gives a good flow of milk, has good appetite, runs on pasture and is not fed grain. She has never been T. B. tested. Is her milk fit for use? Occasionally she coughs, but seems to be healthy.—Mrs. V. A. S., Grampian, Pa. Her cough will perhaps leave her soon as warm weather sets in. Rub her throat with equal parts turpentine and lard once a day. For your own safety and satisfaction the writer believes it would be no mistake to have her and balance of herd T .B. tested.

BITTER TASTING MILK.—I have a cow three years old that came fresh last March. She gives fourteen quarts of milk a day and it is rich milk; but when I churn the buttermilk is bitter, the butter also has a bitter taste. We feed her bran at each milking, her pasture consists of sweet clover and orchard grass. I take the best of care of the milk and cream. The cow does not seem sick in any way and is full of pep.—Mrs. J. D. D., Malvern, Pa. It sometimes happens that off-flavor in milk or cream is caused by bacteria in the milk utensils. Sterilization ends that, but ascertain if the water used for washing the utensils is not the cause. It should also be remembered that milk is readily tainted by exposure, while warm, to strong odors in the stable or elsewhere, also feeding of some strong tasting or smelling feed. Eating certain herbs in pasture lot may be causing most of your trouble. Dissolve one pound of Epsom salts in three pints of tepid water and give at one dose. If she is not with calf and if a change of feed fails to remedy this ailment, it will not pay to keep her for dairy purposes.

INDIGESTION.—My cow's breath has a bad odor, so has her milk, and if her milk is mixed with the other cows' milk it seems to spoil it all. Lately I have fed it to the chickens. I gave her one dose of Epsom salts.—B. G., Armstrong County, Pa. Mix equal parts of gentian, ginger, powdered wood charcoal, baking soda, and salt together and give two tablespoonfuls in feed three times a day; also change her feed.

Boy Growing Baby Beef

ADAMS COUNTY now boasts of having the largest baby beef club in the Keystone State. It is probably the largest of such clubs in any one county east of the Mississippi River. Fifty-six Hereford steer calves have been distributed to members. The calves were purchased in the Kansas City Stock Yards and cost $49.00 delivered to Gettysburg. Lots were drawn for the calves by the members and payment for them made on the basis of weight. An additional sum of $4.00 was paid by most of the members to cover insurance for one year.

The steers will be fed until January, 1926, when the round-up will be held during the Farm Products Show in Harrisburg. After competing in the show ring the steers will be sold.—A. L. B.

Fair Passenger—Captain, mother feels seasick! What shall I tell her to do?

Captain—Needn't tell her nuthin'. She'll do it.—Darthmouth Jack o' Lantern.

Our Readers' Classified Advertising Department

A market place to buy or sell at little expense. Over 90,000 farm families read Pennsylvania Farmer every week. Rate 8 cents a word each for one, two or three consecutive weekly insertions; 3 cents a word each for four or more insertions. Count each number and initial and send cash with order. Orders, discontinuances or changes of copy must reach us by Wednesday of week preceding date of issue. All advertisements set in uniform style, no display type or illustrations. Poultry advertising may run here, but if displayed or illustrations used must run in display advertising columns at commercial advertising rate (55 cents per agate line). Livestock advertising not accepted in this department. Minimum, ten words.

"A penny saved is a penny earned"

MONEY saved by self-denial may be earned with difficulty, but money saved by the simple method of buying the same goods at a lower price is most easily earned. It is just so much clear profit to you.

Sears Roebuck prices save pennies and dollars; in time, many dollars. Many families have dealt with The World's Largest Store for thirty years or more. During that time the amount of their savings by trading with Sears has mounted to sums of real importance.

One old customer writes that he has saved **$800** on the **$3000** worth of goods that he has bought from Sears Roebuck. He is sure of this, for he has always secured comparative prices before ordering.

Sears Roebuck goods are of guaranteed quality always. Your money will be promptly returned if you are not satisfied with anything you buy from this catalog.

Ride on Hasslers

with BALLOON TIRES

there is a "jerky" effect in riding over rough roads, which can absolutely be eliminated by *lengthening* the leaf springs and checking the rebound.

Engineers for high-priced cars have *changed their designs* to meet this new condition.

If yours is a *Ford* car, you can ride on Balloons without any of this bad effect, simply by adding HASSLERS.

They give the effect of lengthening the springs. In addition, they are a powerful rebound check. Two devices in one—and at the price of one. Ask your dealer.

ROBERT H. HASSLER, Inc.

with STANDARD TIRES

the Hassler Rebound Check and Shock Absorber gives your Ford car that velvety, easy-riding sensation which on OTHER cars can only be had by means of Balloon Tires plus a good Rebound Check.

Nearly two million motorists were riding on Hasslers long before balloon tires were thought of.

They bought Hasslers because of the combination of comfort and economy which comes of perfect spring control.

A single ride in a Hasslerized car will convince you. Ask your dealer.

National Holstein Meeting

Annual Convention Followed by Consignment Sale

THE annual convention of the Holstein-Friesian Association of America at Grand Rapids, Michigan, was attended by 133 delegates from forty states. This was the first convention held under the delegate plan adopted last year and the plan made good. The business of the great organization had a full and frank discussion by the delegates. The 1926 convention will be held at Des Moines, Iowa.

Mr. L. L. Oldham, of Wisconsin, made a strong plea that the national association keep its feeet on the ground and keep the smaller breeders well sold on the fact that the real purposes of the organization are intensely practical and that all activities are directed toward helping the business dairyman.

Ex-governor Frank O. Lowden was unanimously reelected president. Two new directors were elected: Harold Stimson, of the state of Washington, and Mrs. Ruth McCormick, of Illinois. Mrs. McCormick succeeds Geo. A. Fox, of Illinois, who declined to run again. Directors unanimously reelected are: D. B. Armstrong, New York; Fred Pabst, Wisconsin, and Prof. T. E. Elder, Massachusetts. L. M. Thompson, Pennsylvania, was again named vice president.

New Members in 1924

During 1924 there was an addition of 1689 new members, making the present enrollment 25,040. States having greatest gains are Wisconsin, 278; New York, 192; Minnesota, 176; Michigan, 143; Pennsylvania, 137; Ohio, 121.

During the year there were 111,529 registrations in the association herd book—a decline of 3.12 per cent from 1924. There are now registered nearly one and one-half million animals. During 1924 there were 87,635 transfers, a decrease of four and one-half per cent from the preceding year. Despite decrease in revenue, however, the association has a surplus $36,349 and a reserve fund of $325,673. There were 9070 boys and girls enrolled in Holstein calf clubs in thirty-eight states in 1924.

S. T. Wood defended the qualities of Holstein milk. He called on his hearers to remember that the value of milk as food was not entirely its fat content. There are other ingredients that are just as valuable. He urged breeders to put more thought into selling the product, which is milk, rather than the plant, which is their herd. Do constructive advertising and boost the industry by pulling together.

High Spots of the Sale

The sixth National Holstein Sale was held June 4 at the West Michigan fair grounds, Grand Rapids Mich. There were fifty-eight consignments which sold for an average price of $763. The top price of $3700 was paid by F. B. Ainger, Jr., for that calf of royal breeding, King Rose Ormsby, 457282, consigned by Hargrove & Arnold, of Iowa. The high mark for females, $2800, was paid by C. Goodhue, of Quebec, for Miss Aaggie Johanna Mercedes, 511762, consigned by the Minnesota Holstein Company. The fifty-six animals sold brought $44,250.

This was the best consignment sale the association has had for several years and while there were some real bargains, the consignees were well pleased as a rule.

Deep Cutivation Cut Yield

THIRTY-SIX years ago the Illinois Experiment Station made some tests in which it was shown that if weeds in corn fields were kept down by scraping with a hoe without any attempt at forming a dirt mulch, the yield was the same as with ordinary deep cultivation, and only slightly less than with ordinary shallow cultivation.

Twenty years ago the United States Department of Agriculture made similar tests at a number of stations over the country and obtained similar results.

Now the Illinois Station has secured some figures which further substantiate the former tests. As an average of twenty-four years of experiments at that station it was found that a field of corn in which the weeds were removed by scraping them off with a hoe gave a yield almost exactly the same as a field cultivated with a surface cultivator. Deep cultivation gave a yield of one or two bushels less on the averag than either shallow cultivation a scraping with a hoe. Many deep cu tivations decreased the yield furth

These experiments indicate clea that the deep cultivation is harmf Cultivation should be as shallow possible, altho deep stirring is l injurious at the first cultivation th later. The feeder roots of the co plant leave the stalk about inches below the surface of the no matter how deep the grain h been planted. Plowing close to th stalk and deeper than these roots in jures many of these roots and resu in decreased yields.

It appears, says the United Sta Department of Agriculture, that th top three inches of soil contains mo available plant food than that fu ther down and that it is of m value as a feeding ground for co roots than as a mulch. Recent ex periments have shown that the val of the mulch in corn culture prob

Five Counties Shipped Bulk of Potatoes

TWO-THIRDS of the more than 4000 cars of potatoes loaded at Pennsylvania points for rail shipment during 1924 originated in five counties. Over one-third of the total shipments, or 1464 cars, were from Lehigh County points. Most of these, as well as many other carloads form southeastern Pennsylvania counties, rolled to the Philadelphia market. Potter County was second with 547 cars, some of which were seed potatoes. The table stock from this county moved to various markets, altho Pittsburgh was an important outlet. Northampton County followed with 360 cars, most of which were sent to Philadelphia. York ranked fourth with 277 cars, practically all fall shipments; Baltimore is a prominent market for York County Potatoes. Berks, with 176 cars, was the fifth.

Other counties which shipped over or about 100 cars of potatoes during 1924 are: Erie, 156; Tioga, 142; Crawford, 129; Schuylkill, 124; Somerset, 119; Bradford, 102; Lancaster, 98.

New Experiments on Chick Feeding

rotozyme in Dry Mash Promoted More Rapid Growth in New Brunswick Tests

By RALSTON R. HANNAS
New Jersey Agricultural Experiment Station

HAT are enzymes and why feed them to poultry? To begin with, enzymes are known emists as catalytic agents, that is, agents h hasten a chemical reaction—something is added to a combination of chemicals to n the action that would normally take place. question will immediately be asked: What his to do with feeding poultry? Just this: all our poultry feeding and experiments up e present time we have considered the comion of the rations and methods of feeding of importance, laying particular emphasis the kinds and amounts of nutrients cond in the rations and the balancing of these ents in such a manner as to make the ra- most suitable for the purpose for which it o be fed, as for egg production, flesh pro- on, or body maintenance. This work was sary and of vital importance, but the high of feed that have prevailed recently have it very necessary that something be done to increase the effi- of our present day feeding ices.

Enzymes Aid Digestion

e way to this increased effi- has been pointed out by a study of the digestive system. ut the digestive system, not of the fowl, but also of any animal, are certain agents, as enzymes, that attack cer- substances and aid in their di- n. For example, one kind of e acts on carbohydrates, an- on starches, another on sugars, er on proteins, and so on. Each ance is broken down by its par- r enzyme that will act on noth- lse.

entists have discovered how of these enzymes may be made. enzymes in various forms have on the market for some time for aiding weak human digestive systems, but not been until recently that there has been of an effort to use them with poultry or livestock. Most of the enzymes that are on market have something that prevents their used in poultry feeding; they act on one only as starch or protein; or they are too sive; or they are unstable.

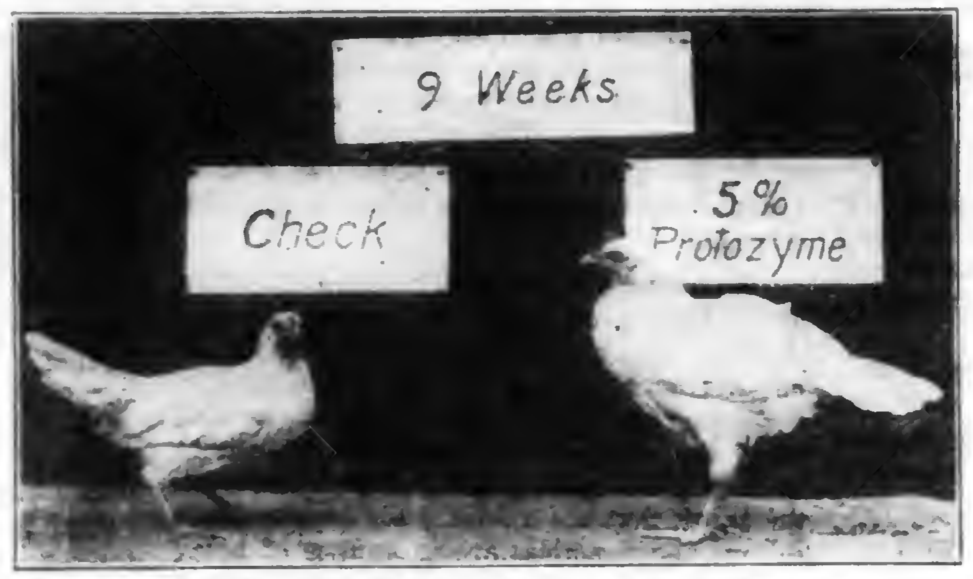
enzyme has been discovered, however, as protozyme, that will react on both and protein and is inexpensive, making it practicable to feed to poultry. It comes form and has very nearly the appearance [illegible] dry mash that is given to poultry; merely added to the dry mash before feeding.

Results of Tests Prove Interesting

eriments have been carried on at the New Agricultural Experiment Station during [illegible] weeks to see how digestion of chicks therefore the resultant growth would be af- The results were most satisfactory in that crease weight was obtained. Five lots of chicks each were used in the experiment. One given the ordinary ration, receiving no whatever; another lot received one per of the enzyme in the dry mash; a third lot ed two per cent, a fourth lot received three nt, and the fifth lot received five per cent of zyme.

he chicks receiving five per cent and three ent showed an increased weight of .12 of a each over those that received no protozyme. two per cent pen showed .07 of a pound gain the one per cent pen .04 of a pound gain. the [illegible] of chick [illegible] enzyme looked better than those not receiving it, and the mortality was greater in the pen not getting the enzyme than in the others. Furthermore, qualitative tests upon material taken from the crop and gizzard of chicks six weeks old indicated increased starch and protein digestion in individuals consuming the enzymic material over those not consuming it. The weight figures quoted above are at the end of the seventh week of brooding.

A similar test was made on the gizzard of two adult birds to determine the difference of digestion. One bird was fed four feedings of ordinary, home-mixed dry mash, each feeding half an hour apart. In the same manner another was fed the same mash except that it contained some of the protozyme. At the end of a half hour, both birds were killed and their gizzards examined. The one not getting the enzyme showed that starch was still present in the gizzard, while the bird getting the enzyme showed no starch present whatever, indicating the preliminary digestive processes had already taken place.



The photograph shows the difference between a normally grown chick nine weeks old and one fed the enzyme known as protozyme.

These facts indicate clearly that our feeding systems can be improved greatly by the addition of some such material. It can readily be seen how this will help the farmer and poultryman [illegible]. The [illegible] of the feed that [illegible] will be obtained [illegible] with less strain on the digestive system. This will not only give better results [illegible] growth or egg production are concerned but should also reduce the mortality rate of the flock [illegible] twenty-five to thirty per cent [illegible] digestive disorders.

The question may be raised [illegible] danger of feeding too much of these enzymes with the result that the system will be [illegible] and [illegible] altogether? The answer is No because only the enzymes that are needed are used and those [illegible] of them [illegible]. The enzymes, therefore, will not do any harm, and will [illegible] do some good. They [illegible] in any way [illegible] and [illegible] results are not to be expected.

Double Profit in the Woodlot

ABOUT eight years ago I purchased seventy-two acres of woodland adjoining my farm for $550.00. This woodland I had long coveted and the owners wanted me to buy it but I did not have the cash before.

The saw mill was in it about thirty years ago and cut all the valuable timber. By this time a good many large trees had grown up again ready for the mill. I cut about 25,000 feet of lumber, using only mature and dead trees.

The first five years I did not cut more than enough for our own use as firewood, but recently we have cut $6000 worth a year and sold it to town customers.

What do we cut for firewood? Only the trees that do not amount to much, such as dead ones, crippled weaklings, dogwood, sassafras and all such varieties which have no lumber value.

By thinning this way we have a nice forest of straight, healthy, thrifty trees. Not only does it look better, but the trees grow faster after the thinning. The varieties, after the thinning, are ash, poplar, white oak, chestnut oak, black oak, hickory, white pine, spruce and maple.

There is nothing more beautiful than a fine growing forest. There are some woodsmen who see nothing in a nice young growing tree but a piece of firewood. It hurts me to see a man cut a growing tree of a good valuable variety.

We have a crosscut saw and tractor with which we can do fast work. We are running two farms as one, 175 acres in all, and we have six to eight men nearly all the year. This way I have work for my men in winter. We haul five to six loads from the mountain in a day with one team. I think we can do it as economically as anybody. We also have an up-to-date saw mill on the farm with water power.

Nothing Goes to Waste

I have remodeled our house and have used white pine from our own woodland and sawmill for all doors and windows. When I have white pine boards I take them to the planing mill and have them planed and matched; then I consider I have the very best lumber. I utilize everything, even the saw dust; we sell it to butchers for spreading. We get $6.00 a truckload for sawdust and $6.00 to $9.00 a load for wood.

Our wood lot is a profitable proposition. It is profitable in two ways—it brings in money and it keeps my men on the farm.—C. P. Bashore, Berks County, Pa.

A Cure for Quack Grass

NUMEROUS experiments have been carried on to devise means for the destruction of quack grass, one of the most [illegible] and most persistently spreading pests that can get into a field and one that is causing no end of trouble in certain sections. Smothering it seems to be the most efficacious way of getting rid of it, but more easily said than done.

The principle involved is that by preventing leaf growth the root growth is deprived of needed substances elaborated by the leaves and will be [illegible] and ultimately die.

South Dakota has devised a crop rotation which is proving excellent in suppressing the quack without loss of crop. Briefly it is this: The land was fall plowed, disced and harrowed. In the spring a heavy seeding of buckwheat was made as a smother crop. The land was again plowed and cultivated in the spring and put into corn. The following crop after plowing was sixty-day oats, sown immediately after preparation. The oats were cut short with another fall and spring plowing and corn, carefully cultivated, was the next crop. Under these ministrations the quack grass seemed to disappear rapidly and no crops were sacrificed.

OUR JOB is to serve our readers. Whenever you are puzzled write to us and we will help you if we can.

Tho we travel the world over to find the beautiful, we must carry it with us or we find it not.—Emerson.

Alfalfa Slogans

A FARM BUREAU in New Hampshire recently conducted a campaign to elicit slogans to popularize alfalfa in the state. A large number of slogans were submitted but the one selected was,

"Milk flows where alfalfa grows."

It is recommended that it be used on stickers, letterheads, etc., in order to further the movement to have at least a half-acre grown on every farm.

The slogan winning second prize was,

"Alfalfa hay will make the farm pay."

"Sow alfalfa—reap success." was another contribution.

The Small Wheat Crop

TIME does not improve the estimated wheat crop for 1925. It is believed now that it will be but little over 650,000,000 bushels, or about enough for domestic use. This yield is over 200,000,000 bushels short of the crop in 1924. If the estimate proves to be correct it will afford a good illustration of the production of only enough to supply the home market. If the smaller crop will automatically set a price which is sufficiently high to make a profit for the grower it will be a concrete example for use by those who advise against producing surpluses. Theoretically, the price should be one made in America rather than in Liverpool as is the case when we have an exportable surplus.

Counterfeit

COUNTERFEIT is an odious word to everyone. No one is willing to have his character or his goods known to be counterfeit, yet there are those who would try to palm off both as genuine if they could. The manufacturers of oleomargarine under the plea of wishing to help the poor man proposed to the recent meeting of the Chamber of Commerce of the United States a set of resolutions deprecating the passage of laws prohibiting the manufacture and sale of oleo, and of the taxes imposed upon the trade. The resolutions start out by saying that, "Beef fat, pork fat, cottonseed oil, peanut oil, cocoanut oil, milk, salt and butter are wholesome and nutritious foodstuffs," and then proceed to argue the legitamacy of oleo as an article of commerce.

Learning of the proposed resolutions the National Dairy Council got busy and drew up another set of resolutions, paraphrasing those of the oleo makers. The Council's resolutions began as follows:

"Whereas, silver, copper, nickle and tin are substantial and useful metals used in one form or another every day"—then they go on and "deprecate the passage of laws and the efforts to pass laws prohibiting the manufacture and use of counterfeit money." This was sent to the Chamber's committee on resolutions, and when the committee's report was read the resolution sponsored by the oleo people was omitted. This is a concrete illustration of the necessity of live farmers' organizations to look after agriculture's needs at critical times.

Community Picnics

THERE seems to be a falling off in the interest which was once manifested in neighborhood picnics. We have attended several during the past few years and, except in communities remote from the larger centers, many of them were flat failures because of the lack of attendance. In many places the practice of holding an annual picnic has been discontinued. In others where an effort is still made only the older people in the community attend. It is said that picnics are too slow for the young people. The automobile and good roads have made it so easy to get far away in a short time to places where there is more excitement.

We do not condemn the practice of getting away from home and the community occasionally. It is a good thing to do and should be enjoyed by every member of the family. But,—and we have called attention to this many times,—there is a tendency at present to overdo the getting away from home with the result that the valuable community institutions and practices are in danger of being lost entirely. The neighborhood that comes to depend entirely upon outside sources for its recreation and entertainment is doomed to disintegrate sooner or later. Everyone owes it to his community and to himself to contribute his presence and his ability to the activities which make the country community a good place to live. We are just now in danger of losing the qualities of neighborliness and hospitality for which the country places were once noted. Good old-fashioned picnics are good places to revive these qualities.

Mounting Taxes

TWELVE cents out of every dollar earned in America must go to pay taxes,—local, state and national! So much have we multiplied government activities that, counting all persons over sixteen years of age, one person in twelve draws his living from the other eleven. During the war when immense things had to be done in a short time, there was some excuse for the great sums collected, but with the return of peace conditions there should have been a lopping off of these costs. But so great is the army of public servants (?) that it is almost impossible to combat their combined efforts to hold on to their jobs. Nothing but an aroused and united public opinion will impress the politicians with the fact that they must reduce their political patronage army. The public has an unusual opportunity just now under the leadership President Coolidge to reduce government penses by a much needed retrenchment, the public's aid is necessary to overcome concerted efforts of government employ stay in office. And what is true of the nati government is true of state and county ernments as well.

Defense Day

DEFENSE DAY, set last year as a day "peaceful mobilizations," proved to something of a "flivver." This year, July has been named for that purpose. Many ne papers express doubts as to the suitable of the time and fear that the showing will be any better than it was last year when th was little observance of the event outsid some of the principal cities. People look u the Fourth of July as a day for purely holi enjoyment and it is doubtful whether considerable number will voluntarily fo their pleasure to engage in activities which they have no particular liking. I this reason that many people think choo that day will prove to have been a mistak

UNDER this heading we publish an torial on some current topic taken f the columns of a contemporary paper. publication does not necessarily mean that sentiments expressed are the sentiments Pennsylvania Farmer.—Editors.

OUR WEAK SPOT

Now that all the state legislatures h adjourned and further danger from law ing this year has passed, some intere figures have been compiled, which may give serious pause to thoughtful Ame citizens.

In thirty-eight of the states a legis session was held and the total grist of statues ground out reaches the amazing ber of 10,800, North Carolina at the with 1773 new laws placed upon its st books. More enactments emanated from year's sessions than in any previous period in American history. Few peop the several states have the slightest idea these thousands of new statutes com them either to do or not to do; and it is ously to be doubted whether as much as per cent of the entire grist met any a need. We are "lawed" to death and in multiplicity of enactments find ours hopelessly baffled—and oftentimes law-m ers as well, tho wholly unwittingly so.

Before condemning, however, too se ly the apparent willingness of law-make cumber up the statute books with new e ments, we should recognize the fact th the same thirty-eight legislatures 38,44 ures were introduced and for the most pressed for adoption. That nearly t fourths of these proposals were discarde flects more credit upon legislative assem than might at first be accorded them; a furthermore a significant comment upon public in general, in whose brains legisl proposals originate.

The time for a reformation has come can be most effectively expressed, not by making biennial legislative sessions ob tory upon every state, with further re tions upon the session length; but princip in a campaign of education to convince that "there ought to be a law" is not effective answer to either local or nati troubles. It is high time to call a ha American law making.—National Gr Monthly.

Washington Letter

FARMERS INTERESTED IN EAN SHIPPING.—What is to be one about the merchant marine? his question promises to be given uch attention when Congress eets. If we would believe those who re in favor of government aid to ipping, there are two alternatives the maintenance of a merchant arine flying the American flag. One a direct subsidy to the ship owns. The other would give a bonus t of the federal treasury to the mployes of the steamship companies.

The United States Chamber of ommerce has started a study of the hole situation. Four committees ave been named and are now at ork outlining plans for the investiation. Representatives of Agriculure have been appointed on all four ommittees, indicating the business nterests have discovered that farms have some little interest in the ansportation of their products by ater. Among the farmer representives are T. C. Atkeson, of the Naional Grange; President O. E. Bradute, of the American Farm Bureau ederation; W. L. Stockton, presient of the Montana Farm Bureau; eorge N. Putnam, manager of the ew Hampshire Farm Bureau, and M. Loomis, secretary of theAmeran Dairy Federation.

A REMINDER OF COLONIAL AYS.—The farmers' Fourth of uly picnics promoted by the Meran Farm Bureau Federation and e national defense day programs ake a good combination, according War Department officials. "The rmers are the most peace-loving roup in America," says President radfute of the Farm Bureau, "but ey are vitally interested in adeate national defense. The present an of mobilization for defense day, rking back as it does to colonial ys when farmers gathered together muster day with their own rifle musket, expresses such a defense stem totally free of militarism. e of the purposes of our Fourth July picnics is a renewed, patriic devotion to our nation. In carng out our picnic plans we have ught and secured the active coopation of a number of large national ganizations."

MANY TAKE COLLEGE COURSE Y RADIO.—The National Farm adio Council organized recently in icago is receiving encouraging enrsements from the farm organizaons. It aims to promote better rm programs and to remove duplition of effort in the air so that rmers will receive the largest meas e of benefit and satisfaction from dio it is possible to obtain.

Referring to the radio as a means disseminating information among rmers, Secretary of Agriculture rdine speaks of the rapid growth the radio school at the Kansas ate Agricultural College. Some ,000 farm students had enrolled d were taking much interest in e course when he left the college March. Lectures on agricultural bjects are broadcasted by the colge instructors five nights a week. om four to five hundred answers to estions are received daily from rmers who are taking the course.

FARMERS GOING TO EUROPE.—veral thousand American farmers planning to visit Europe this mmer according to representatives the Farmers' International Travel b, under whose direction the trip ll be [illegible]. This organization, which is being [illegible] by the National Farmers' [illegible] other farm organizations, [illegible] plans whereby farmers [illegible] Europe at a small cost, and [illegible] with farming conditions there. The trip will be [illegible] and will be made [illegible] States owned steamship [illegible].—F. E. Reynolds.

Harrisburg Letter

MORE VOCATIONAL TRAINING. —Plans of the State's Department of blic Instruction for the coming hool year will show a marked trend ward expansion of vocational eduion, particularly in rural districts ing high schools. This change in policy is the result of the extended surveys made by the select committees on educational work the last year and a half and some of the appointments in the reorganization of the department indicate importance to be attached to the vocational side. It is commencing to dawn upon educators that too many young folk are being prepared for the professions.

MORE CONSOLIDATIONS.—Dr. L. L. Driver, who has been giving much attention to the problems of consolidating schools, has been placed in charge of that branch of educational supervision in Pennsylvania and will carry out some of the plans for merging of school facilities. Money going into construction of consolidated schools this year will aggregate a large sum it is said.

SALARY ADVANCES.—While the state pay roll will go up over $125,000 a year as a result of the semiannual reclassification and promotions announced in June, it is an interesting fact many of the specialists and technical men in the agricultural and forests and waters departments will get increases in salaries which will bring them into line with some college professors. This is the first time in which the people trained in various lines dealing with agriculture have received advances in pay on anything like a substantial basis.

Coolidge calls...

THIRTY TOWNSHIPS A MONTH. —Real activity in the testing of cattle for tuberculosis will begin after July 1 when the combined state and federal funds will enable it to be carried forward more vigorously than ever before. It is expected at least thirty townships a month will be cared for under the area system of inspection.

ACRES OF FIGURES.—The state's first farm census will be finished in a month if people in half a dozen townships get a move on and file their statements. There are acres of figures being made up some of which have been called for by county authorities who were instrumental in assembling the data. Results of studies as to farm population, bearing [illegible] in machinery have been surprising for some counties.

WHEAT TO THE FRONT.—While the crop reports issued by the State Department of Agriculture for the first of June show fruit and some staple crops in rather poor prospect, the fact remains there is a holding up of wheat reports which has led the Bureau in charge of figures to calculate the average yield per acre of winter wheat will run over seventeen bushels. The aggregate crop will exceed that of 1924 by many thousands.

URGE HORSE BREEDING.—State authorities are calling attention of farmers and horse owners to the opportunity for horse breeding in Pennsylvania now due to the decline of the number of horses on farms in this state from 506,000 five years ago to 466,000. It is contended there is a good market for horses right in this state. Many farmers have inquired for prices and stock.

THE MILK TEST LAW.—Notice has been given the new milk testing law will go into effect August 4, which means by that time all creameries and other establishments buying milk will have to take out state permits and their employes will have to be especially examined. This is the first time the state legislature has stepped in to protect the milk seller.—Hamilton, Harrisburg.

New Jersey Letter

JUNIOR BUILDING AT FAIR.—The boys' and girls' club exhibits will be housed in a new building at the Trenton Interstate Fair this coming September. The construction of the buildings is such that the exhibits of crops grown by members of the clubs, livestock, foods and clothing, will be prominently displayed. The general exhibit hall will measure 26 by 100 feet and will constitute a front wing of the new building. Three wings project from the center hall, one capable of housing 100 dairy animals, another providing for poultry and the third for swine exhibits. The building is to be of frame construction and with concrete floors and will be completed just previous to the opening of the fair.

COLLEGE FERTILIZER CONFERENCE.—The College will be host to fertilizer manufacturers and dealers from New Jersey and neighboring states at a conference at the College farms on June 23. Managers of [illegible] selling fertilizers are also being called [illegible] and [illegible] Station will address the meeting. A special [illegible] of the experimental plots at the College which have been conducted for twenty-eight years. Previous conferences of a like nature at the College have called out a large crowd, resulting in a better understanding between those in the fertilizer industry and farmers. Acknowledgements of invitations received to date indicate a large turnout this year.

STATE MEMBERSHIP MANAGER. —A. R Scully, of Morris County, member of the Executive Committee of the New Jersey Federation of County Boards of Agriculture, was appointed State Membership Manager for the farm bureau, effective June 15. Mr. Scully has been active for some years in farm bureau affairs and is a prominent farmer and Guernsey breeder in Morris County. He took part in the state-wide membership drive a year ago last fall when the farmers renewed their allegiance to the farm bureau on a three-year basis. Mr. Scully will work in Middlesex County as his first assignment, later visiting many other sections of central and southern New Jersey.

DRY WEATHER DAMAGE.—Farmers thruout New Jersey have been seriously handicapped by a backward season, coupled with some damage from the extremely hot weather of very early June. Mid-June, however, brought some relief from rains and farm work progressed rapidly. The dry weather with fruit growers, however, was helpful in curbing the inroads of some of the fruit tree pests. The warm weather also started the summer touring season in earnest and roadside markets flourished on the main highways adjacent to practically all of the large cities.

FARMERS REPRESENTED.—Dr. Frank App, of Cumberland County, prominent grower and associated for some years with several of the state farm organizations and the College, was elected a trustee of the New Jersey State Chamber of Commerce. More recently he was elected as the official delegate representing the Farm Bureau in that organization.—B.

New York Letter

WEEK LONG HEAT WAVE.—A heat wave that has had no equal since July, 1921, has held the state in its grip for a week, breaking with a storm that did some damage but quite thoroly soaked the suffering crops.

CATTLE EVIDENCE SECURED —Cortland herds have been thoroly combed for "T" brands, but sixty-three having been found among about 40,000 animals. Some of these came from another county, while it is suspected that more were either slaughtered or driven away. Most of the inspectors and veterinaries have left the county. Three carloads of the branded animals will be slaughtered in Sherburne this week under personal supervision of state and federal inspectors. The Grange and Farm Bureau of the county have demanded that those dealers and butchers or others guilty of fraud be punished to the limit, that the reputation of the dairy industry in the county be protected against future suspicion. District Attorney A. R. Haskell, of Cortland County, has evidence in the case of five cows bearing the "T" brand that were sold as reactors by an Onondaga County dairyman to a Cortland butcher and which have been found in a Cortland herd. This case will be pushed first. Little criticism has been made of the area plan of eradication, or of state or federal inspection. But in future a plan will be worked out taking extreme care of reactors in such a way that substitutions will be impossible. Cortland physicians report that gland tuberculosis is very prevalent among Cortland babies and school children and a new milk ordinance requiring the pasteurization of all milk from tuberculin tested cows has been passed.

OLD THEORY UPSET.—Dr. H. M. Pollock of the New York State Department bureau of statistics, [illegible] American Psy[illegible] [illegible] the two [illegible] in the cities [illegible] the state [illegible] and that [illegible] women are likely to fall victims. This [illegible] but false ideas are thus completely routed, and the [illegible] for lonesome, isolated farmers' wives may now be used in a better cause, so far as the Empire State is concerned. —M. G. Fount.

The Neshaminy Gardens
(OUR FARM)
Where an Editor Works and Thinks

SWELTERING! That is the right word to use in describing the weather during the first week in June. For eight days the thermometer ranged from 92 to 100 degrees. But it certainly did warm up and dry out the top soil. It also hatched out every fertile nit and insect egg, and every such egg is always fertile so far as we know. However, we kept the beets and carrots growing by applying water. We can apply 1000 gallons per hour with our temporary system of pipes and nozzles. And, oh, how they did drink it up! The water was pumped from the well we had drilled last fall and which was located by a peach limb!

✦ ✦ ✦

THAT fact was not admitted in this column last fall when the subject was under discussion because,—well, you know. Just at the time plans for a well were being made, I made a visit to a Pomona Grange up state when the subject of locating water by peach limbs and other divining rods came up. Several men strongly defended the idea and cited several cases to prove it. One man ridiculed it and went so far as to say that, altho he thought very highly of "Our Farm" column, he would quit reading it if he thought I believed in such nonsense. Well, I don't know whether I believe in it or not. There seems to be no sense in it. Neither logic nor reason furnishes any grounds for accepting it as a basis for action in locating a well. But we played with it here. The peach limb invariably turned down at this point. We stuck in a peg and told the well drillers to drill there, without saying why. We have an abundance of good, cold water and we don't care a rap whether the peach limb's action was a coincidence or an indication.

✦ ✦ ✦

ONE of the almost universal neglects of farmers is that of keeping their tools sharp. Men work month after month with hoes without once using a sharp file on them. Cultivator teeth are worn to stubs without being taken to the blacksmith. This neglect makes work harder and less effective. A good, sharp tool or implement is twice as effective as a blunt one. A whole lot of the tri and troubles of some farmers is to their own carelessness.

✦ ✦ ✦

THE Dr. Van Fleet rose which friends, the Weigleys, sent us year to be planted in honor "Snookums" is blooming now and is a beauty. We appreciate it many reasons. First, because it to be very hardy; second, because delicate pink and white color is snal; third, because it is firm solid; and lastly, because it so tingly represents the one in wh honor it was planted. The intense hot weather has not been favora for bringing roses to perfection th year. They have opened too rapid and when they do this the petals not retain their color so well nor so long. The Van Fleet has suffer less in these respects than some the others.

✦ ✦ ✦

THE hot week made setting celery plants an uncertain propo tion. We had a thousand shipped us and they arrived on Wedn when the ground was dust-dry top and the thermometer registe 97 in the shade, and it was that f four succeeding days. However, th were splendid, transplanted plan and we set them at once. Rows w furrowed out rather deep (if straight) with a shovel plow (yes, we found one and bought it and water was run in the bottom using a hose. The plants were cli ped and set in wet soil, after w dry dirt was drawn about th Boards were used to shade them few days, then we used the sp kling system on them. Further rep will be made later.

✦ ✦ ✦

IN SPITE of the extreme cold heat this season crops have be growing fairly well. We have had to June 7, radishes, lettuce, stra berries and red raspberries to and to sell. Corn and potatoes coming along nicely and have ed two and three cultivations. orchard trees are making growth, and the newly-set stra ry plants are all getting a good We have tried to keep all crops c and for this the hot week wa blessing.—R. P. K.

AMERICANS SHOULD PRODUCE THEIR OWN RUBBER.... H. S. Firestone

Her Milk
—Is It Clean?

Cows may give rich milk but it is impossible to keep the milk free from dirt and dust. And the ordinary methods of straining do not remove this sediment.

The U. S. Government says, "Strain milk through sterilized cotton if you would have milk absolutely free from all sediment." And that's exactly what Dr. Clark's Purity Milk Strainer does!

DR. CLARK'S PURITY MILK STRAINER

It removes all the dirt and sediment from milk. It gets dirt no other method of straining can possibly get. No fuss, no muss, no dirty rags to wash, scald and dry. The Purity Strainer is easy to use and easy to clean.

World's largest dairies and condensaries such as Borden's, Van Camp, Carnation, Mohawk, etc. use and endorse it. Guaranteed to do all we say or your money back!

PURITY Cotton Discs are made in any size from 5½ in. to 7 in. diam., for all makes of strainers or filters. Send for a trial order.

Made in two sizes—10 qt. and 18 qt. Ask your dealer about the Purity Milk Strainer or write us for circular and prices. Send today!

Move Celery Seedlings

We have a small bed, about three by six feet, full of celery seedlings, pretty thick in spots. Do you think we should transplant them? We need about 5000 plants. Can that many be grown on a space this size?—M. S., Tioga County, Pa.

If you figure a little you will find that if 5000 plants are grown on a space the size you mention, each plant will have only about a half square inch of space. This is too little for strong plants. If there were a perfectly even distribution of the plants over the area, each one having about this much room, I would be inclined to let them stand, because celery transplanting is no easy job.

Since you say that the plants are thick in some places, thin in others, I suggest that you leave the widely spaced ones alone, moving only those that are crowded. Set these in rows six inches apart, or more for wheel hoeing, and an inch apart in the rows.

A Back-saving Implement

If you set the plants in a cold frame and use the narrower spacing, buy a ten-cent hand weeder and fasten it to the end of a three-foot stick. This will let you cultivate to the middle of the bed without much stooping.

In making a bed to receive celery seedlings it is just as important to have the soil porous and non-baking as it is to provide these conditions in the seedbed. Hard soils seem to prevent quick growth in the celery, and if there is any slope to the surface it will be very hard to water evenly and thoroly on crusted soils, because the water runs away without entering.—W. C. P.

Tip Burn—Mulches

ALTHO head lettuce of the crisp head, or Iceberg type, is thought to be hard to grow in warm weather, our own small crop shows no signs of tip burn or running to seed after a week of the warmest and dryest June weather that the oldest inhabitants can remember. What trouble we have with the plants consists in a soft rot that works among the outer leaves in the headed part of the plant, these leaves not showing on the outside. If this soft rot is due to wet weather, it must have started several weeks ago, as there has been little rain in that time, and the weather has been unfavorable for rots.

Tip burn is thought to be due to an insufficient supply of sap at the ends of the leaves. It may arise either because the sap-conducting vessels cannot supply sap fast enough, or because the supply of water in the soil is not great enough. Irrigation, however, does not wholly prevent injury.

Mulch Would Save Tomato Plants

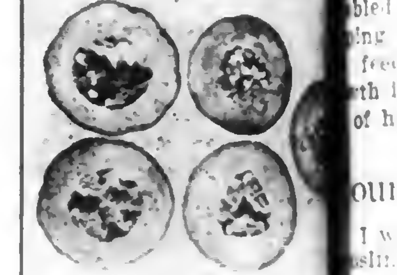
Very warm and dry weather following moist weather brings more tip burn. It seems likely that the root systems of the plants are not large enough to supply the water needs of the leaves, when the roots have been made in a wet soil. Probably a drier soil with less favorable conditions for top growth would bring about a better balance between roots and tops.

This condition has prevailed in the case of our New York lettuce, which has held up perfectly this year in spite of heat and drought. The heads have been smaller th grown earlier in the spring anything they have been be proportion to size.

Observations among toma beds this year indicate the i portance of using mulches rows both to prevent drying to prevent crust formation o

Before and After

Melons like these look temp sell well on the retail market



But when they look like this at cent, can you blame the buyer if to risk his money on melons? mented ones are sure to squashes.

soils. Two beds that I ha failed for lack of a mulch. on very light sand, and the early in May and germina poor. The other was on a h which baked after late Apr With ideal weather either have been sucessful, and mulch of tankage or leaf peat moss, both would have chances of success in spite weather.

The usual plan adopted ers to ensure germination seeding, the crowded plan able to raise a surface cr plan works in this direction there is no economical way the plants if they are to there is danger that they too slim and tender.—W. C.

Dusting for Green W

IF YOU look closely at plants affected by the green worm, you usually worms on the inner surface younger leaves, many of the sight from above. Earlier in son, in cool weather, the w on more exposed parts, but suns of May and June drive shade. This fact has an bearing on the control of the worm by use of poisons, beca the insects working far dow center of the plant we must poison close in there and not outer leaves.

This thoro work can be hand dusters of the cheese cloth type, the dust is needed. Even du the crank type are not very unless each plant is given in attention with the nozzle downward. This takes time as the insect becomes more as the plants grow larger, is good business to start the or sprayer very early when injury can be seen.—W. C. P.

hicks Need Clean Soil

Please tell me what I can do relieve little chicks afflicted ith gape worms. What can be one to keep the worms from etting into the flock?—A. D., rmstrong County, Pa.

ape worms can often be dislodg- rom the throats of little chicks a twisted horse hair wet with entine. The best remedy is to ent serious trouble from gapes aising the chicks on fresh soil. worms can live over in the soil year to year and chicks are often bothered on land where ks have been raised on the same ted area for many years in suc- ion. Plowing and liming old soil re the chicks range over it will control gapes.

edicating the drinking water five or ten drops of a five per solution of saylcylate of soda seemed to help some chicks bled with gape worms. We find ing the soil as clean as possible feeding the chicks for rapid th is the most satisfactory man- of handling these pests.—R.G.K.

oung Goslings Ailing

I would like to be advised on slings. The older ones are do- g nicely, but the younger ones e dying. They live for about o weeks, eat good and act ry. Then they stop eating, and around with their eyes osed, and shake their heads. have a flock of forty-three.— R. M., Bradford County, Pa.

eak in goslings may be due ck of vigor in the breeding stock. osure to the hot sun will some- s cause losses. A pasture with ty of shade is necessary for the results. Too much corn meal is as good a starting feed as stale d soaked in milk mixed with fine pped boiled eggs. One-third corn l and two-thirds middlings may better results as a mash feed all corn meal. Add five per cent to the mash.

Bowel trouble causes some loss among goslings and is often due to drinking stagnant water or eating too much soft feed. Goslings sometimes have congestion of the brain, due to indigestion or intestinal worms. Two teaspoonfuls of castor oil may help a gosling with digestive trouble. If the droppings show signs of worms try giving each gosling a half teaspoonful of turpentine. This can be placed deep in the young bird's throat with a medicine dropper.

Another remedy for goslings weak in the legs because of worms consists of one-fourth pound of sulphur, one-fourth pound of Epsom salts, and two ounces of powdered copperas. This is mixed and placed in twenty-five pounds of the mash formula used for the goslings. One feeding of the mash containing the medicine is given each day until the worm infestation seems under control.—R. G. K.

To Stop Toe Picking

TOE picking is usually noticed among chicks that are confined or where they are kept in large numbers. It is a bad habit developed largely because chicks have too little to do and insufficient variety of feed. Toe picking may start from an injury or blood, exciting the chicks' appetite for fresh meat. This is usually followed by cannibalism during which time many chicks are picked on until they are killed.

As soon as chicks are turned out of doors on grass, given an opportunity to range and something else to think about besides toe picking, the trouble usually ceases. The chicks that are picked on should be removed from the flock and any affected parts greased with tar or carbolated vaseline. This will assist in healing the wounds and cover up the blood. Chicks are easily excited by the sight of blood or fresh meat and can, thereby, be easily started on the bad habit of toe picking or cannibalism.

oultrymen Should Swat Flies

HE New Jersey State College of Agriculture cites the experience oseph Hoch, Jr., of Camden Coun- New Jersey, as evidence that the e fly is an enemy of poultry as as [illegible]

ck 1921, Mr. Hoch was near- ut of the poultry business by cause of tape worms in his ck. No one seemed to be able to e the mystery of where the ms came from, so he decided to stigate for himself. After read- ery thing that he could find t tape worms, he began [illegible] the flock. [illegible] was finally [illegible] on [illegible] Mr. Hoch found them [illegible] in the maggot stage in [illegible] dropping and in barn- [illegible] week the [illegible] developed into flies which [illegible] produce more maggots.

Flies Carried Tape Worm

[illegible] at the State experi- [illegible] of several tape worms [illegible] Mr. Hoch's infected fowls show- [illegible] being two varieties com- [illegible] carried in house flies.

Mr. Hoch immediately took steps wipe out flies on his place. Drop- boards were cleaned daily and droppings put where flies could get at them. Where land became bare it was plowed and limed. One-half acre of clover or alfalfa was allowed for each 100 pullets, and the land was rotated so that a range would be used only one year at a time.

The result has been that flies could find no place to multiply and have therefore practically disappeared from Mr. Hoch's poultry farm. Since then tape worms have disappeared.

"You can't raise flies and poultry too" is Mr. Hoch's belief.

Cornell Judging School

THE Eighth Annual Cornell Poultry Judging and Breeding School will be held the week of June 29 to July 4 inclusive. Instruction is confined to the judging of fowls for egg and meat production and the judging of eggs. Approximately 100 persons [illegible]. Tuition is free except for a [illegible] laboratory fee of $5.00. The school is open to persons residing outside of New York State.

The announcement giving full details of the school will be mailed free upon application to the Poultry Department, New York State College of Agriculture, Ithaca, N. Y.

Boarding Guests Bring Dollars

City Folks Would Enjoy Your Country Home

THE boarding guest affords many a dollar of extra money for the country woman who appreciates the opportunity. This means of making money may seem very hard, exacting and unremunerative but disappointment is usually due to the lack of business management and not to the business itself.

There are always more vacationists who want a good country boarding place than there are farms offering it. Besides these, there are many sick people well enough to wait upon themselves, but in need of invigorating air, plain, good food with green vegetables, milk and eggs, a simple, clean and attractive room and the life-giving atmosphere of a country home. But these are hard to find. Either the country woman is neglectful of the dainty tastes of the convalescent, or she attempts to supply city dishes and the luxuries of a modern hotel instead of the simple things these people really want.

Some One to Look After Guests

If there are growing girls in the family, an aunt or even a grandmother, (and almost every country home does have some of these), much of the waiting upon the guests can be done by them, so that the regular demands of the summer,—canning, harvesting, etc.,—need not be neglected.

The bedrooms should be airy, the windows screened if only with netting and some arrangement made for baths—either in the bathroom, which many country homes have, or by the plentiful supply of both warm and cold water for the guest. Provide plenty of inexpensive huck, damask and turkish towels, made plain enough to launder easily. Some guests like one kind, some another, so it is always thoughtful to offer them all. When you have learned their tastes, only one kind need be placed in the rooms. Most people bring their own special soap but you should provide the little guest cakes anyhow, bought for a small sum in the city shops.

Old Furniture an Attraction

Don't think that the old fashioned furniture is a drawback! If the mattress and springs are comfortable and the chest of drawers is substantial and the mirror clear, such furniture will add greatly to the charm of the room. Perfect cleanliness is always the greatest asset. A painted floor with home made rugs or just matting with some curtains and covers of bright cretonne make the rooms a most welcome place to those who long for rest. Be sure to provide some sort of table at which the guest can write and don't forget the little kindness of keeping fresh flowers in the room. If the home garden cannot supply them, the woods and fields will.

If there are a number of men to hurry thru an early breakfast it may be most convenient to serve trays to the rooms later. This is less work than serving several breakfasts in the dining room. Preparing trays sounds like a lot of work, but it need not be and if the guests are those who prefer that sort of thing, let them pay for it.

The simplest black trays covered with cloths made by fringing unbleached linen or simply featherstitching in a color, served with pretty china, food in nice proportions (fruit, toast, coffee and a soft-boiled egg) and a flower laid across the napkin, cannot help but add to your success.

Give Them What They Came For

People who come to the country, expect country food — vegetables, milk and egg desserts, berries and fowl. Don't kill yourself making pies and cooking city dishes. If they had wanted them, they would have gone to the places which make specialty dishes. Keep the garlic taste out of the milk, serve it chilled. See that there are no flies in the dining room, that the cloth is unstained, the water cold.

Make paying guests a success and worth your while by planning to give them their money's worth and getting your time's worth. Charge enough to make a profit. The guests will think your place more desirable if it is not too cheap. Tell your city patrons, your doctor and all your friends that you are open for guests, and then, cater to them.—E. M. P

Creamed Dishes

MAIN dishes or vegetables dressed with cream sauce, not only go further and seem richer, but are more nourishing and much more appetizing. The sauce may be made plain, seasoned only with salt, pepper and butter or it may be given zest and piquancy by adding stoned olives, a few pieces of mint, chopped mushrooms, chopped peanuts, a little curry powder, a tablespoon of tomato sauce or chopped spiced pickle — according to the ingredients to be dressed.

White Sauce and Brown Sauce

Make a foundation sauce as follows:—

Heat a tablespoon and a half of butter slowly in a hot pan. Sift into this, gradually, two tablespoons flour, stirring constantly to prevent burning. Add milk slowly, stirring the mixture to prevent lumps and when it is smooth and thick, season with salt and pepper.

If a brown sauce is desired, bacon drippings or beef drippings from the roasting pan may be used instead of the butter. The flour, carefully watched, may be allowed to brown slightly. This will have a very different flavor from the plain white sauce and is very good to serve with cold meat.

CREAMED EGGS WITH CHIPPED BEEF

Boil four eggs fifteen minutes, chill and slice. Pour hot water over a quarter pound of dried beef, twice, to remove some of the salt. Tear into small pieces. Pour the white sauce over the sliced eggs and dried beef and serve on toast.

CREAMED POTATOES WITH NEW PEAS AND HAM

A small amount of ham will go far in this dish. Scrape a dozen small white potatoes and boil in salted water until done. Cook two cupfuls of new peas in salted water for half an hour and drain.

Make a double amount of white sauce, season well with salt, pepper and paprika. Fold in a cup of diced cold ham (boiled or fried) add the peas and pour over the potatoes in a deep dish. Serve with shredded parsley on top.

CREAMED COLD MEAT

Cut cold ham, lamb or beef into thick slices. Make a brown sauce, adding mint for lamb, diced sweet pickle for ham and either tomato sauce or mushrooms and olives for the beef.

CREAMED CHICKEN

To two cups of diced chicken (cooked or canned) add a cup of mushrooms, a tablespoon of pimento strips and two cups of new potatoes, whole if very small, diced if large. Serve in ramekins with grated cheese and cracker crumbs browned on top.

CREAMED LIMA BEANS

When lima beans are in season, cook them in salted water, drain and cover with a heavy white sauce, seasoned well with butter. This sauce may be made with bacon fried out, leaving the browned pieces to serve with the beans, the fat serving instead of butter to mix with the flour. —Effie Maurine Paige.

VEAL LOAF

3 lbs. uncooked veal
½ lb. salt pork
1 cup fine cracker crumbs
2 eggs, well beaten
1½ cup water
2 teaspoons salt
1 teaspoon pepper

Grind the meat fine, mix with the other ingredients and make into a loaf. Bake in a greased pan 1½ hours in a hot oven. Serve with catsup.—Mrs. H. W. B.

BETTER HEALTH

Orchard, Garden and Dairy Win over Drugstore

WHEN you stop to think of it, aren't we mortals queer? In any gathering, you can be sure of hearing two topics discussed—the shrunken condition of the dollar and the poor health enjoyed by the majority of those present.

That in itself wouldn't be so if there was no help for trouble. Our queerness lies in fact that, while we deplore our erty, we continue to spend earned dollars for things that our health instead of improving

The thousands of laxatives, appetizers, cough syrups, dig tablets and breath sweeteners loom so large on our yearly ex accounts, are worse than when taken without expert advi

Of all our funny false econo there is none funnier nor more than "saving money" by dosing selves with patent medicines of consulting a physician and ing a balanced ration. But sup that we really did know what to prescribe for ourselves in ness, it would still be a foolish of money and man-power to buy take artificial substitutes for God-given foods of orchard, and dairy.

False Economy Is Wasteful

Compare the "initial cost" "upkeep" of depending on beef-and-wine, with the saving that from Nature's tonic, sun-air-and amins.

Do you remember what the doctor said when asked whether cough syrup that the patient prescribed for himself was all r "Yes, if you take it properly" how is that, Doctor?" "Open window and throw [illegible] the medicine. And forget to shut window!"

If milk, spinach and prunes fixed up with patent [illegible] we should pay a pretty penny for strength-giving qualities they tain.

If the young demonstrator in picture advertised [illegible] he had covered the elixir of [illegible] and willing to donate a sample to person in the audience the would not hold the [illegible]. doing that very thing when she pares delectable dishes [illegible] the terials her table hol[illegible] Perha these things didn't [illegible] should have more fa[illegible] cure "for what ail[illegible]

Our dollars would [illegible] one health better if w[illegible] tonics from the farm [illegible] the drug store!—I. S. H.

Preparing a meal that's good for you —and good to eat.

If You Do Your Own Sewing

Finishing Touches Make a Great Difference

"I'M NEVER quite satisfied with my own sewing," declared a home dressmaker. "My home made dress may be of better material and just as good a design but the ready-mades have a finish that I cannot obtain."

"I know what you mean," answered a friend. "I used to feel just that way about my own sewing. Then I began studying to see why this should be.

"I think the truth is that, too often, our home made things never are really finished.

"We home sewers are busy with a multitude of diversified duties and the sewing has to be crowded in wherever we can make a spare hour. So often we need the new dress right away. It would be interesting to know how many home made dresses are pressed into service before the fastenings are on or the girdle or other accessories are quite finished.

Finish Them Before Wearing

"Sometimes these items never are finished as they should be. Sometimes they are rushed thru at the last moment and the frock is hastily donned with a feeling that it isn't just right or as satisfactory as a ready-made even of the least expensive variety!"

On the other hand, we sometimes feel that the cheap ready-made is mostly finish. Poor workmanship and crooked seams are concealed beneath a bit of trimming and pressed and tailored into shape. If we are going to take time to make a dress let's take time to properly finish it.

See that every fastening is properly adjusted. That collar, cuffs and all accessories are properly arranged. That pleats hang true and that the length is becoming. Then, with a properly heated iron and plenty of cloths, press.

Pressing Adds So Much

Pressing costs only the time consumed in doing it and it adds more to the final effect of the garment than expensive trimmings. Press all the garment to give the material the desired new unwrinkled appearance. Press all seams, hems and pleats. Press the shoulder seams to give a tailored effect.

When the pressing is completed have a final trying-on and if everything is pronounced correct hang the dress carefully away on a hanger. Follow this rule if it is only a gingham or percale house dress and if you are a neat seamstress you never will have that uncomfortable feeling that your dress doesn't look right.—Alice Margaret Ashton.

Mother Was Right

AFTER having read in a recent number the article describing what a wonderful time Kennie had with his automobile chains I would like to say that in my estimation his mother dealt very wisely with him. I see no reason for punishment of any kind for such experiments.

Just the other day while at work in my kitchen I heard my little boy, almost five, crying pitifully. When I went to the door to investigate I heard the men say, "Take it right in and show your mother what you have done!"

He Was Only Investigating

When he came to me he handed me a chick which was almost drowned. He was so frightened! The poor little chick did look as tho it were almost dead, as he had put it into the watering trough several times.

As he handed the chick to me, he said, "Mamma, I didn't mean to hurt it. I only wanted to see if it could swim like a ducky."

Instead of punishing him, I showed him the toes of the chick and explained that chickens' feet are not webbed like ducks', and also how the feathers differ. Then as we talked we wrapped the chick up and made it warm and dry.

If a child never tries to discover things, his little brain will not be working, and it must work in order to develop properly. In the "Life of Robert Fulton" we are told how in his childhood he was determined to learn what that steam would do that came out of his mother's tea kettle.

Experiments Should Be Encouraged

My motto is to encourage instead of discouraging children in their little experiments. A few factory made toys may be all right, but children should make many things for themselves. These will interest them far more than ready made ones.

My little boy of eight has had no end of pleasure this spring with a toy he calls his tractor. He made it of a spool, a match stick, a rubber band, a piece of paraffin and a button. It was several days before he could get it to running, but finally when they did see it rolling across the floor, great was the glee of both big brother and little brother.—M E.

SPINACH WITH CREAM

Pick over and wash one-half peck spinach, steam until tender, drain and chop fine. Melt three tablespoons of butter in pan, add spinach and cook five minutes, stirring constantly. Sprinkle with one teaspoon flour, continue stirring and pour in three-fourths cup of hot sweet cream. Season with salt to taste, simmer five minutes, stirring often, and serve.

SPINACH SALAD

Wash, drain and cook spinach, putting as little water as possible in pan. Usually the water clinging to the spinach from washing is enough. Drain and chop fine. Season with salt, pepper and vinegar. Cut six slices of thin bacon in shreds lengthwise and fry crisp.

Remove from fat and add one tablespoonful of this fat to the cooked spinach. Pack your butter molds solidly with spinach. Chill, unmold, and arrange on thin slices of cold boiled ham, tongue or bologna sausage, each piece being a little larger than the mold of spinach. Arrange each piece in a nest of cress or lettuce, dot with the bits of crisped bacon and a teaspoonful of mayonnaise, and serve.—L. M. T.

Childrens Croquette's

THAT left-over roast can be made into a very appetizing dish, not too rich for the kiddies. Put meat (whether beef, pork or chicken) thru the meat grinder. Use whatever gravy or stock you have on hand for the binder. To three cups of ground meat add one cup of gravy (quite thick).

Tid-bits of left-over vegetables,—peas, lima beans, corn, or carrot, add occasional zest. Shape into cones with hands. Dip or roll in cracker crumbs or crumbs of toasted bread. Set them on an oiled pie pan or in an uncovered casserole and brown in a hot oven. Serve hot.

I often add variety by pouring over them tomato sauce or hot gravy just before serving.—G. S. S.

Editor's note.—In calling this recipe "not too rich for the kiddies," the writer has reference, of course, to the older children. Made-over meat dishes have no place in the dietary of the child under nine or ten.

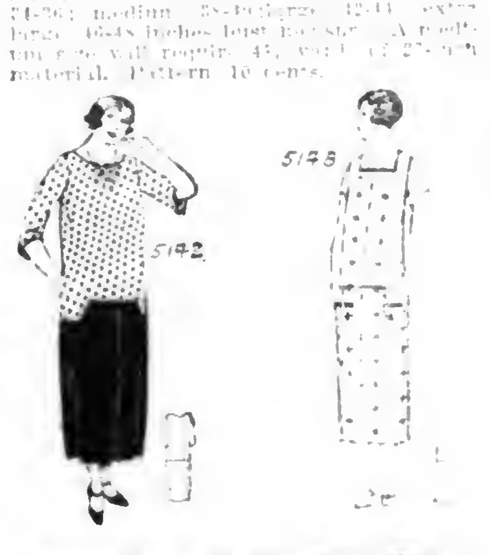
Syrup left from preserved pears can be added to the vinegar used in making pickles to give them a specially fine flavor. It is also nice used in place of molasses in ginger cake, etc.—Mrs. E. M. C.

What Your Folks Would Like

Directions for Ordering.—[illegible] and letters [illegible] printed at beginning of each description. Give bust measures when ordering waist patterns, waist measure for skirts, and age for children's patterns. Address Pennsylvania Farmer, 261 S. Third Street, Philadelphia, Pa.

5112.—A Stylish Frock for Mature Figures.—[illegible] good for the [illegible] Sizes: [illegible] 42, 44, 46, 48 [illegible] To make as illustrated will require 1¾ yard of plain material 40 inches wide and 2 [illegible] for a 44-inch size. The width at the foot is two yards with plaits extended. Pattern, 10 cents.

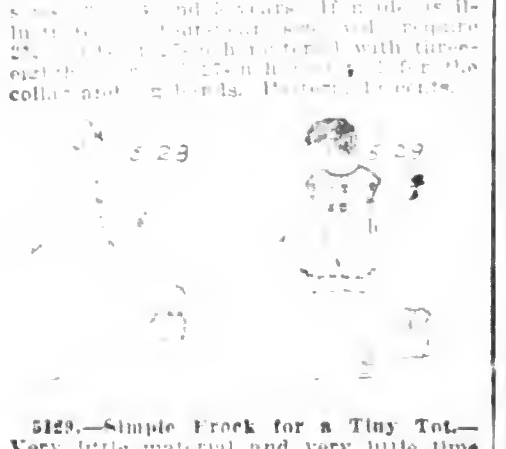
5118.—A Cool Apron.—Gingham or percale could be used [illegible] Four sizes: small 34-36; medium 38-40; large 42-44; extra large 46-48 inches bust measure. A medium size will require 4¾ yard of 27-inch material. Pattern 10 cents.



5051.—A Good "Sport's Shirt" Style.—This is a good model for an outing shirt. The sleeve may be in wrist length or short to the elbow. Flannel, broadcloth, cambric or silk could be used for this style. Seven sizes: 15, 15½, 16, 16½, 17, 17½ and 18 inches neck size. To make the shirt for a 15-inch size requires 3¼ yards 36 inches wide. Pattern, 10 cents.

5098.—A Practical Undergarment.—This model has waist and body portions joined together with a band that [illegible] The straps from the shoulder [illegible] and also to hold the [illegible] Six sizes: 2, 4, 6, 8, 10 and 12 [illegible] requires 1½ [illegible] inch material. Pattern, 10 cents.

5128.—Pretty "Play" Garment.—[illegible] Pockets are a feature of this garment [illegible] Four sizes: [illegible] and 4 years. If made as illustrated [illegible] with three-eighths [illegible] for the collar and [illegible] bands. Pattern, 10 cents.



5129.—Simple Frock for a Tiny Tot.—Very little material and very little time go into the making of a little dress of this kind. Voile or batiste are favorite materials but one could use chambray or the new printed tissues—or tub silk. Four sizes: 1, 2, 3 and 4 years. A three-year size will require 1¾ yard of 27-inch material. Pattern, 10 cents.

OUR YOUNG PEOPLE'S FORUM.

From Forum Friends

Dear Cousin Ruth and Forum Friends:—How are all the cousins these days? I enjoy reading the letters each week, also looking at the pictures and drawings. I am copying some recipes in a book. My town cousin enjoys reading the letters in our paper, too.

Our school closed on April 30th. I was very glad. I like spring when the fields and trees get green. This spring my father bought another farm; now we have 400 acres. We have horses, cows, sheep, lambs, hogs, chickens, cats and dogs. It surely keeps us all very busy. I like to work on the farm.—Pauline L. Wible, Fulton County, Pa.

It's a good idea to copy recipes into a book. Some day you'll have a cook book all your own. I wonder if any other Forum girls are keeping a collection of recipes that appear on our page.

COUSIN RUTH.

Dear Cousin Ruth:—Have any of the Forum friends had Field Day in their school? We had Field Day on May 20 and had a fine time. We had several races. They were three-legged race, relay, sack, potato, peanut, dashes, broad jump, high jump, basket ball throw, physical training, a game for the little folks, a May pole dance. We sold ice cream and soft drinks for refreshments. I did not win any prize. My little sister won the running race.

Our school closes June 12th. We have had our English exam. and I passed in that. I hope I pass in all the rest. If I do I will be in the fifth grade next year. I like to go to school but will be glad when it is vacation time. We expect to have a picnic the last day of school. We also have a treat of ice cream.

I have just started taking music lessons and like it very much.—Margaret Mount, Burlington County, N. J.

A WAGON LOAD OF FRIENDS
Helen Goughler, Venango County, Pa.

Dear Cousin Ruth:—I still live on a farm and like to live on a farm, too. My brother had two rabbits but they froze. He has six old pigeons, one squab and five eggs. We have a little kitten at our house. I like it very much. It is gray, red and white. My father has ten chickens. My brother also has two bantams. They are very pretty. We have a big garden with a lot of flowers in it. We haven't any more school now so I have to work on a farm.—Catherine Hoenis, Cologne, N. J.

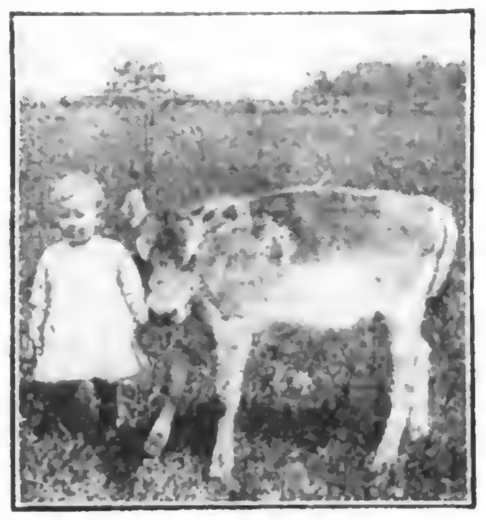
Dear Cousin Ruth and Forum Friends:—Isn't this a lovely spring? Every year I appreciate its coming more and more.

We have a very large, beautiful lawn. I love to see the grass grow greener and greener while the shade trees are awakening from their long refreshing sleep.

Oh! I would not exchange places with the town or city girl for anything. Imagine what they are missing.

I have an idea of city life because I go to school there every day. I love school very, very much. But only wish the building was situated out in the country where everything is quiet. I think nice quiet surroundings promote study. Because I can study much better at home than at school as I find it so hard to concentrate where it is noisy. Some do not mind but I do.

I live on a small farm about five miles from where I attend school. During the summer vacation I work and earn my school expenses. I like a vacation of work. I wonder how many Forum friends do this, too.



OUT IN THE FIELD
Harry Sharp, Venango County, Pa.

I have seven classes daily at school and enjoy studying every subject but I love the study of things scientific best, doing experiments and learning what's and why's of things.

I also am taking a course in music (piano) which I enjoy.

How many love to read good interesting books? I spend most of my leisure time in this way. I think it is the best way to spend leisure time because in that way we are able to visit all sorts of places and meet many people.—Katheryn Irene Weiss, Snyder County, Pa.

Dear Cousin Ruth:—Now I am going to write a few lines so Montgomery County will be represented in our Y. P. F. page as I don't see many letters from Montgomery County.

I live on a farm one and one-half miles north of Royersford. We have three horses and ten cows. The horses' names are Lady, Maud and Bill.

I live about one-quarter mile from Ba[illegible]low. I am thirteen years old and am in the eighth grade.

I expect to continue school for I want to be a school teacher and I hope to see some of the boys and girls of Montgomery County write a letter for this page.

With best wishes to yourself and Forum friends.—Frances Hellybower, Montgomery County, Pa.

Dear Cousin Ruth and Forum Friends:—This is my first letter to the Forum page. I live on a farm of seventy acres. We have three cows, a calf and two horses. I go to Elm Tree School and this is my second year. I did not miss a day and was not tardy. I got a present from my teacher for the most [illegible] in my class. He gave me a box of handkerchiefs. I passed the third grade examination.—Verna Mae Gruber, Lancaster County, Pa.

Dear Cousin Ruth and Forum Friends:—Well, I think we Forum friends have quite a name on our page. It has been quite a while since I have written the Forum. I see our friends are waking up a little. Our page is getting quite large the way it looks. I have six little bantams a couple of weeks old and five about a month and a half. I think they are the prettiest little things I ever did see.

My birthday was the 15th of May and I got quite a few presents. I am going west the 6th of July and when I come back I think I will have an interesting letter to write. We have eighty-six little chickens. They are Barred Rocks and Rhode Island Reds. Did you have a nice time Memorial Day? I had a very nice time.

I didn't try for the last contest but I think I will try this next one. Hope our page still gets larger. We are just dong fine, I think. Dont you, Cousin Ruth?

With best wishes for Cousin Ruth and Forum friends.——Philura Klipple, Lackawanna County, Pa.

Dear Cousin Ruth and Forum Friends:—I suppose you have room for me yet because I would like to join this happy circle.

We live on a farm of sixty-five acres and have several cows, also three horses. For pets I have three cats which I like very much.

How many are ready for the strawberry season? I surely am. Our school closed May 11 and we had a very nice time on the last Friday. We had refreshments and played games.

I cannot understand why the boys and girls of Carbon County do not wake up and write a letter as I saw very few letters from Carbon County so far. Good luck to all.—Frances G. Haas, Carbon County, Pa.

Dear Cousin Ruth and Forum Friends:—I thought I'd put my head in and see how Cousin Ruth and all Forum members were. I thought the snapshots were pretty. I am nine years old and in the third grade. For pets I have two calves and six cows.

I have one brother, his name is Earl. I will say good-bye and good luck.—Ruth Hunt, Crawford County, Pa.

Dear Cousin Ruth and Forum Friends:—I am a lively country girl twelve years old and live on the "Sunny Side Farm" of about seventy acres, one-half mile east of Logantown.

We have pigs, cows, horses and chickens and about 200 young chickens.

Our school closed the last of April. We had a picnic on the last day of school. We all had a fine time. Next fall I will go to the junior high school.

I have two brothers and three sisters. My youngest sister is ten months old. I like to play with her.

I like to milk and work in the garden. I also like to ride my brother's bicycle.

Cousin Ruth, as this is my first letter to the Forum, I will close, hoping to see more letters from Clinton County.—Celia E. Stamm, Clinton County, Pa.

Dear Cousin Ruth and Forum Friends:—We have taken Pennsylvania Farmer for a long time. Every Friday I always watch for the mailman to get the paper. I enjoy reading the Forum page. This is my second letter and I like to write to the Forum friends.—Anna Smith, Butler County, Pa.

Dear Cousin Ruth:—I am just a little girl but I am going to write anyway. I am eight years old and am in the second grade. I have two sisters and five brothers. I live on a farm and have many pets. I like horses and kittens best. I have a dolly and I like her very much. I can sew and I made her lots of clothes.

Dear Cousin Ruth, how I would like to visit you sometime! Wouldn't it be nice if we could meet each other sometime accidentally?—Virginia Irene Montgomery, Berks County, Pa.

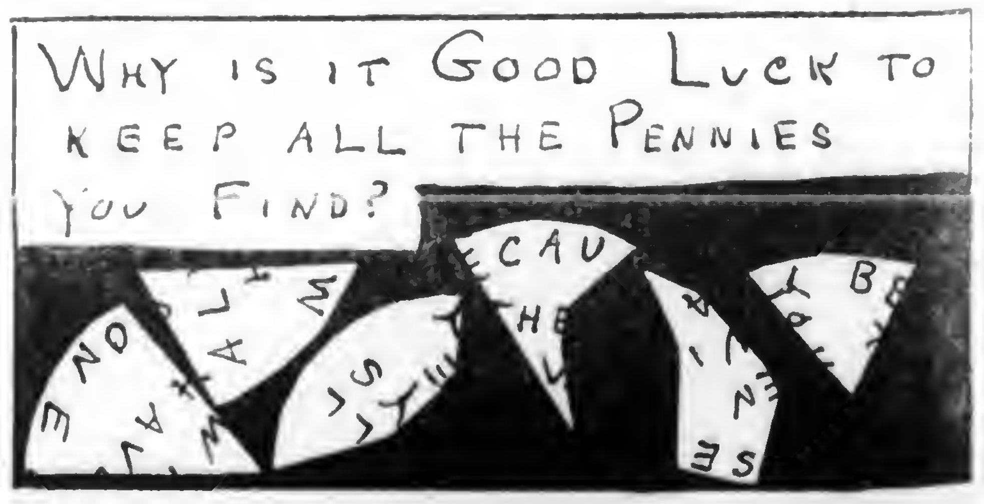
OUR LITTLE FOLKS PUZZLE CORNER

Address all replies to the PUZZLE EDITOR, PENNSYLVANIA FARMER, 261 SOUTH THIRD STREET, PHILADELPHIA.

DEAR LITTLE FOLKS:—You can learn about this particular sort of good luck by cutting out and piecing together the white pieces with the letters on them which you see in the blackened part of the picture. You will find that these pieces will form a circle if properly placed, and then you can read the answer. When you have found the answer sent it to me on a POSTAL CARD so that it will reach me by June 27. BE SURE TO SAY HOW OLD YOU ARE. The ten children, sending in the correct answer, whose cards are the best in grammar, spelling, punctuation, penmanship and general appearance, will each be awarded a prize.



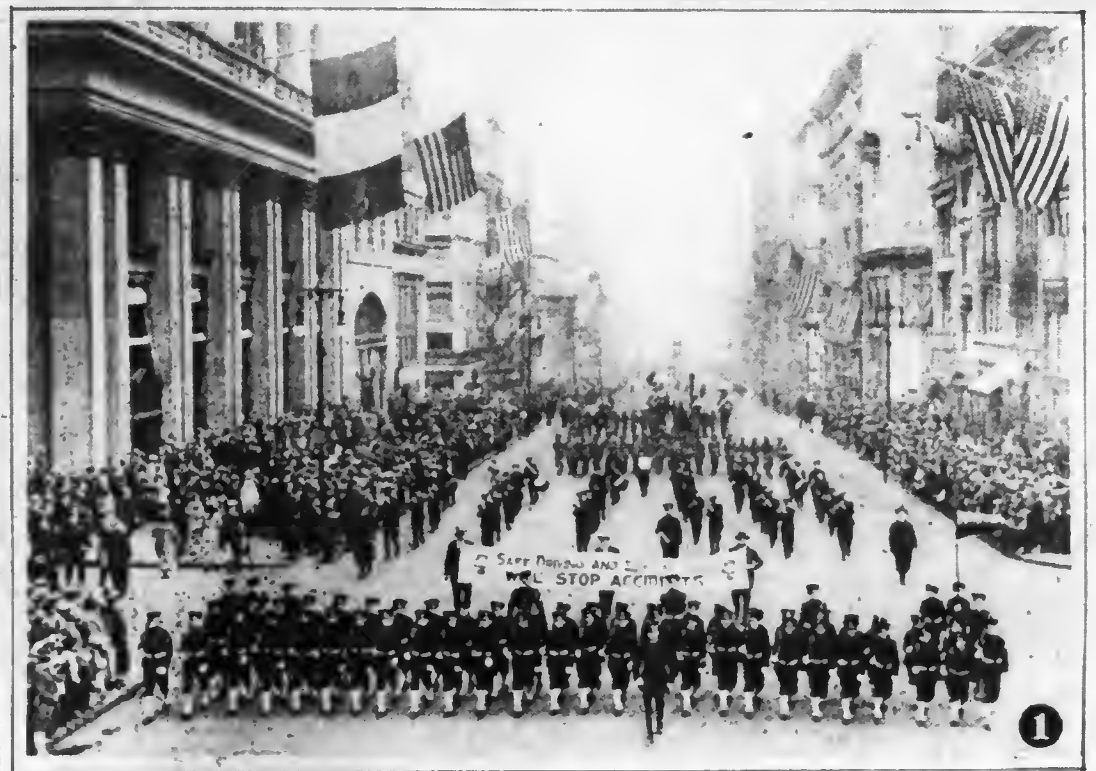
WHY IS IT GOOD LUCK TO KEEP ALL THE PENNIES YOU FIND?

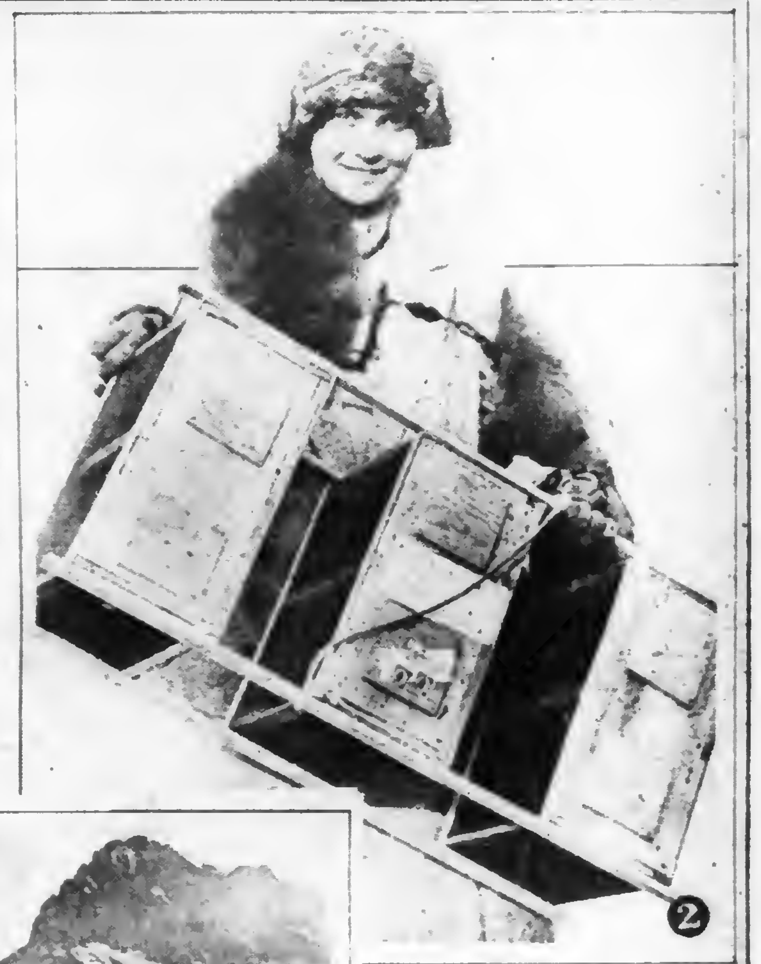
Puzzle Prize Winners

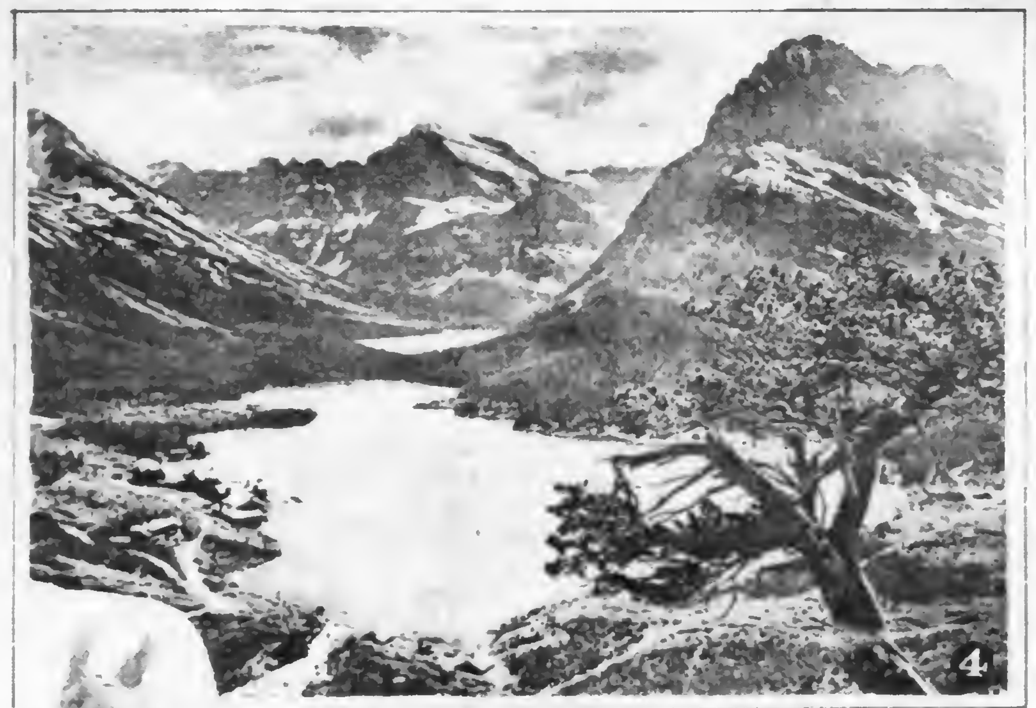
The answer to the puzzle in the May 30 issue of Pennsylvania Farmer is: GAME, SAME, SOME, ROME, ROSE, HOSE, HOST, LOST, LAST.

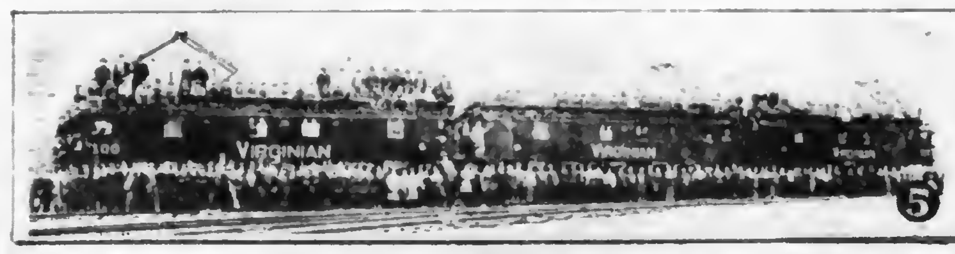
The prize winers are: Vardie Adams, age 9, Embreeville, Pa.; Elizabeth Cook, age 11, Tyndell, Pa.; Eleanor Coughanour, age 11, Jacobs Creek, Pa.; Frances R. Buchanan, age 8, New Paltz, N. Y.; Frances Hellybower, age 13, Montgomery, Pa.; Mary H. Hemminger, age [illegible], Newville, Pa.; Jean Hower, age [illegible], Danville, Pa.; Freda Know, age [illegible], Berwick, Pa.; William C. Pugh, age 10, Oxford, Pa.; M. Irene Stauffer, age 9, Gordonville, Pa.

PASSING EVENTS IN PICTURES









(Copyright by Underwood & Underwood)

1.—Looking up Fifth Avenue on New York's Safety Day parade.
2.—Three two-pound packages of bees, shipped from the South by mail to a progressive northern beekeeper.
3.—Rear Admiral Billard, commandant of the U. S. Coast Guard, who is responsible for the blockade of the rum fleet off the Atlantic coast.
4.—Lake McDermott in the foreground and Lake Josephine in the distance,—photograph taken high up in the Rocky Mountains of Glacier National Park.
5.—Electric locomotive, the largest in the world, proves itself in initial test at Pittsburgh, where 300 men were engaged in its construction.
6.—One of the many birdhouses which F. L. Hunt, of Maryland, has built up around his home.
7.—Blue ribbon winners at spring horse shows, and their proud owner, Miss Priscilla Mitchell.
9.—Gar Wood, at the helm of Baby Gar V. This speed boat recently raced the Twentieth Century Limited down the Hudson River—and won.

The Stove

By Marjorie L. C. Pickthall

Continued

A FIGURE, lithes even under the furs, a face hidden in the cowl he had drawn forward above his fur cap, a certain strange immobility that vaguely chilled her, but surely—help? So swift is thought, that in the transitory seconds before she spoke again her brain had shown her a picture, a memory of a wild-cat which she and Garth had vainly tried to corner in the yard—of the creature's utter immobility until it launched itself and struck.

"The stove! "Oh: the stove."

She thought, as her hands went out to that motionless figure in the shadows, that she had spoken all the desperate appeal that was in her heart. But she only repeated: "Oh, the stove, the stove!"

"What stove?"

"The stove. The stove in our cabin. There's—no more wood for it!"

She waited. Surely he understood. But he remained as he was, motionless, staring down at her.

She looked up at him with a burning appeal. She had forgotten to rise from her knees. She kneeled at his feet in the snow. Her breath came in gasps. "There," she repeated, helplessly, "there—in the cabin—the stove! It's going out!"

Still he waited.

"There's a sick man there—my brother! Oh!" she finished, as he did not stir, "help me, if you're a man!"

"Oh, b'gosh, yes, I'm a man!" She fancied that he was laughing in the shadow of the cowl. "But why should I help you?"

She had no more words. Silently she lifted and held out to him her bleeding hands.

After a long minute he stirred slowly. Without a word he laid his gun crosswise on two fir branches that grew above her reach, easily within his own. He lifted the ax from the snow. She watched him. Four sharp cross-cuts, and the trailing branch fell. He set his foot on it, chopped it quickly into four or five pieces. As each piece rolled free, Dorette snatched it as a starving woman might snatch bread.

"That enough?"

Staggering under her load, she stared at him. "No, no!" she stammered. "It's not enough for the night. For the pity of heaven, cut me some more!"

She turned away and hurried towards the cabin. Half-way there he overtook her. Without a word he lifted the logs from her arms into his own. She was too spent to thank him. Dumbly she moved at his side, conscious only that strength was here, help was here, that she might yet save Derek.

Entering the cabin, there was no glow, no light at all. With a low sound, Dorette swung open the door of the stove. Nothing was there but a handful of red ash ringed with grey.

With trembling hands she gathered a few splinters and thrust them in; she crouched before the gaunt, iron thing, as tho she would hold it in her arms and warm it in her bosom. But the man, who had followed her, thrust her aside curtly enough. She watched him as he shaved a stick into delicate ribbons of wood—watched him as he coaxed them into flame. He tickled the appetite of the sullen, devouring thing in the stove with scraps of resinous bark and little twigs. Presently the fire laid hold on the larger logs, and fed upon them, hissing. He shut the door then, and turned to her.

She had lighted a lamp, and in the light stood looking at him, softly bright. Her eyes were stars of gratitude. She said at once: "My brother's still living."

She gestured towards the bunk. His eyes did not follow the gesture, or move from her pale face, as he said, abruptly: "You stay here with him. I'm going to get you in some more wood."

HER eyes flashed suddenly with tears. She said, brokenly: "You're good. Oh, you're a good man! While you're cuttin' the wood, I'll thank God you came!"

He went out into the night without answering her.

He returned in half an hour loaded mightily. Sitting on the end of her cot, she smiled at him, falteringly. She had been weeping.

He did not speak to her. Light-footed as a cat, he busied himself about the humming stove, then went forth again.

When he came back the second time, she was asleep.

Her face—very pale, very pure, fragile for one of her life and race—was rosed in the glow of the stove. Her hurt hands were curled within one another, like the hands of a child. Moving in his noiseless way, the man went again, and looked down at her.

His furred cowl had fallen back. His face also caught the light of the stove. Dark, keen, predatory, it was the face less of a man than of some embodied passion of hate or revenge, the face of an Ishmael, the face of Cain. It looked strange now, so little was it shaped or accustomed to the gentleness of expression it momentarily wore, as a breath blurs the gleam of steel. Light and silent as all his movements were, they showed no gentleness. But he seemed gentle when he lifted the end of one of Dorette's dark plaits, which had fallen to the soiled floor, and laid it on the cot beside her just because he hesitated and was clumsy.

The plait of dark, silken hair was warm; his hand lingered over it. He leaned above her, and her breath was warm. That strangely unmoving regard of his was on her face. As if it had called her from her dreams, she woke, and lifted to him the clear eyes of a child. "I—did thank God—you came," she whispered, with a child's simplicity. Sleep held her again, almost before she had finished speaking.

The young man drew back, noiselessly lifted the axe, and once more went out.

Sinewy, silent, untiring, he toiled for her all night. And all night she slept.

She had slipped into unconsciousness as a child does, worn out with anxiety and fatigue. She woke a woman, and flushed to her hair, as she realized what she had done.

THE man who had helped and guarded her all nght, was standing in the doorway. The door was open; there was a freshness in the air, which the roaring stove raised to the warmth of summer. The world outside was a dazzle of sun; silver drops rattled from the eaves; a crow called in the forest. It was the first sun of spring, the year's change. In Dorette's heart was a change also, a quickening, a birth of something new and unknown, that almost brought tears to her eyes. For the first time in her hard life she had rested on another's strength; unconsciously she had found it sweet. That simple heart was in her look as she went to the stranger. She said softly, "I did not mean to sleep. Why did you let me?"

He said, almost roughly: "You were all tired out."

The tears brimmed over. She did not know if pain or happiness moved her. She went on: "I said—I knew—you were a good man."

"Well," he answered, but not as if he was answering her, "for one night."

His furred hood hid his face. The wakening blush dyed her clear face again, as she said: "Let me see you. Let me see your face."

"Why?"

On the word she faltered, confused. She did not know why. She stammered: "Because of what you have done—of what we owe you."

"We?"

"My brothers and I. Derek's still alive. I almost think he's sleeping better—more natural. When—when Garth comes home, he'll thank you as I'd like to."

She looked up into the shadowed face, wistfully. He had turned from her again, and was gazing down the trail. After a moment, he said: "There's coffee on the back of the stove, and some cornbread. You'd better eat it. I've had some."

SHE went meekly, shamed that she had slept while her saviour served himself. She would have liked to serve him. Something strange and stormy was shaking her; she had no name for it. The food choked her, hungry as she was, but she ate it obediently.

She had scarcely finished, when he called her. She ran and joined him at the door. Something in his voice thrilled her; she saw in him again that strange and threatening immobility of the night before.

He said, swiftly: "You're lookin' for your brother to come back?"

"Yes, yes. Any time."

"With another man?"

"With the doctor. Why?"

He raised his arm and pointed. In the blinding dazzle of sun on snow, she saw two small, dark figures, just rounding the curve of the trail.

Her heart rose and flooded her with a passion of thankfulness. She said, quietly, after a minute: "Yes, yes, it's him and the doctor. Now—now, you'll let him thank you, as you—won't let me."

Her words ended almost in a question, for she saw that, while she had been eating, he had taken his rifle on his arm and put on his snowshoes. Suddenly, she began to tremble a little, aware of something in his stillness, which vaguely threatened.

He swung upon her suddenly—one would have said, savagely, but that he was laughing. Those two black figures down the trail were sweeping rapidly nearer. All the latent fierceness of the man had flamed into being, at their approach. He laid a hard, slim hand on Dorette's shoulder and turned her, so that, at less than arm's length, she faced him. He said, softly, in the midst of his almost noiseless laughter: "I'll show you how you can thank me."

She looked up at him, her face colorless, her lips parted. In the shadow of the hood his eyes gleamed at her, his face bent nearer. The world fell away from her; there was nothing left in life for a minute but that face, that voice.

She just breathed: "Who are you?"

"You'll know in a minute!" He looked swiftly from her to the two men down the trail. They were coming on fast. He seemed to be measuring his distance from them.

WHEN they were so near that their faces were all but discernible, he caught the girl to him. She was slack in his hold; all her life seemed to be in her dazed eyes; she would have fallen, but that he held her with an arm like a steel bar. And twice and three times he kissed her.

"That's how you can thank me!" He released her laughing still.

She staggered, her hands over her red mouth. With the movement of release he thrust her, rough and swift, within the door of the cabin. A bullet sent a spray of dusty snow over him. She saw, in one reeling instant, Garth on his knee down the trail, rifle levelled for another shot; the other, a laughing shadow, slipping from her hands, from her life, into the shadow of the forest from which he had come.

Another shot, wide of mark; Garth leaping to his feet again and tearing towards her, followed by the doctor who was to save Derek, and whom he had found at last, thirty miles beyond Mandore. But she had no eyes for them—for a moment, no heart.

Eyes and heart were on that other figure at the edge of the trees, swift, terrible, laughing, calling to her with raised hand—

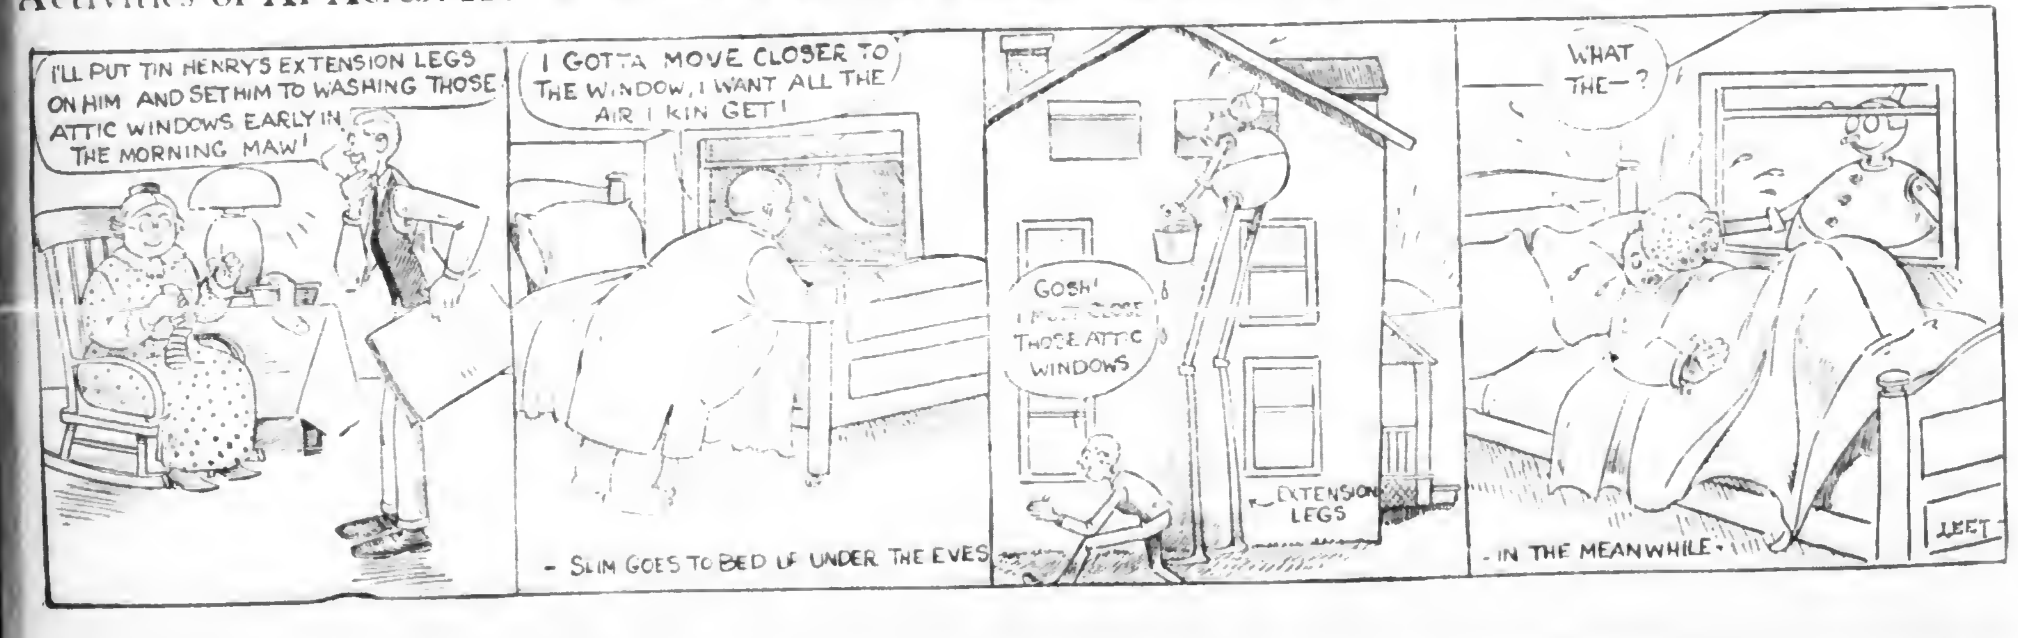
"Tell him you kissed Maxime Dufour!"

When Garth reached her side, she was on her knees, laughing and sobbing, striving with her scarred small hands to obliterate his trail in the snow.

(The End)

Activities of Al Acres: *As A Window Washe Tin Henry Makes a Good Alarm Clock*

By Leet



I'LL PUT TIN HENRY'S EXTENSION LEGS ON HIM AND SET HIM TO WASHING THOSE ATTIC WINDOWS EARLY IN THE MORNING MAW!

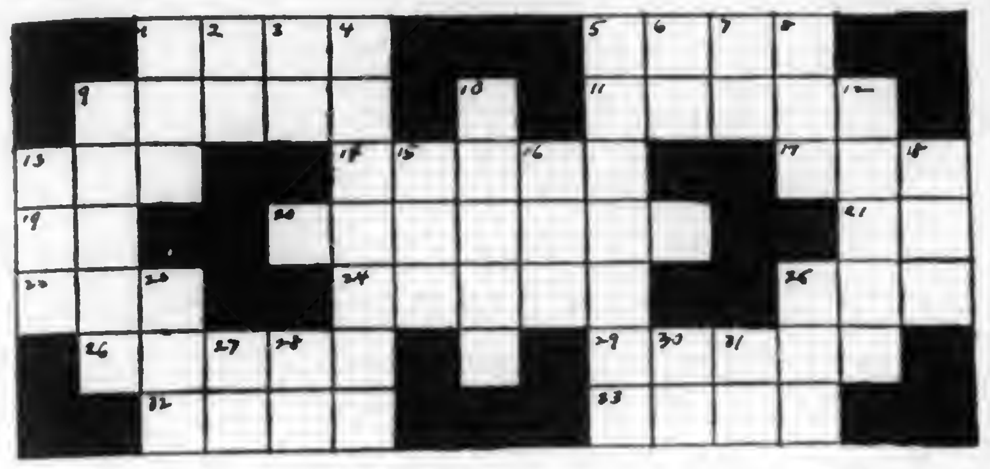
Our Weekly Cross Word Puzzle



TO SOLVE this puzzle, fill in the white squares with letters forming the words defined in the list below. For example: 2 (down) is UR, 16 (down) is AMO, and 24 (across) is IDIOM. You may begin anywhere in the puzzle. Follow the definitions carefully and, by noting letters common to two words, you will soon have a clew to help you. The solution of this puzzle will appear in an early issue.

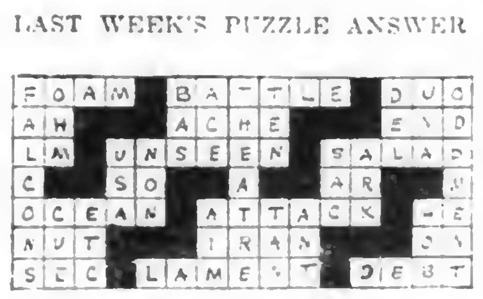
READING DOWN

1. To move slowly
2. City of ancient Babylonia
3. Unto
4. The language we speak
5. To try
6. Master of Arts, abbreviation
7. Printer's measure
8. Not old
9. A rod formed of twigs used for punishment
10. To transmit, as money, bills, etc.
12. Eaves
13. To court
15. To deliver or free by violence
16. Latin verb meaning "I love"
18. A grain
20. A label
21. To assist
23. A continent of the western hemisphere, abbreviation.
28. Dental Surgeon, abbreviation
30. Area, abbreviation
31. Road, abbreviation

READING ACROSS

1. A musical instrument
5. "So be it"—a response used in prayers
9. Title of an English peer of the lower rank
11. One who takes
13. False hair worn on the head
14. Large, or of importance
17. Armed conflict
19. Conjunction
20. To glow faintly
21. The name of the "Empire State," abbreviation
22. A fall month, abbreviation
24. Distinctive characteristic of a language
25. Devoured
26. What we shake when we meet a friend
29. The capital of France
32. A deep or gaping wound
33. Walked upon

LAST WEEK'S PUZZLE ANSWER



Did you ever hear this one?—

The Women's Home Companion held a "shortest short-story contest. Stories were limited to ten words. No theme was assigned. Thirty thousand entries were received, some humorous, some patriotic, some dramatic and some pathetic. Some prize-winning stories follow:

Sunrise—Majestic virgin forest.
Midday—Receding voices.
Sunset—Blackened waste.

Dad: Polly Marsh got married today. So did I. Dick.

"Now when I was young," roared grandfather. Grandma entered. Silence.

Lost: My little dog, Spot. Forty cents reward. Billy Brown.

Wanted: Mechanical toy liked by children better than adults.

Smith. Law—Real Estate—Insurance. Office: Mrs. Smith's Boarding House.

Wiring ninety dollars, come home. Love, Mother.

A boy beating rugs: "Sure ma's home—you dumbbell!"

Feb. 12, 1809. "Any news, Hank?" "Tom Lincoln's gotta son."

Honor Roll American History, Course C:
Isaac Rosenstein.
Ping-hi Ching.—Pathfinder.

Irvin Cobb was a guest at a dinner party in New York where table rapping and other phenomena were discussed.

"Are you a clairvoyant?" a woman asked Mr. Cobb.

"Not that I know of," he answered.

"Do you ever talk in your sleep?" she went on."

"No, but I often talk in other people's," he said. "I'm a Chautauqua lecturer."

"Y[illegible] 'usband' [illegible] up, a victim of f[illegible]."

"But I didn't know 'e even played the game."

"'E doesn't. 'E perished 'is larynx at the match last Saturday!"—The Passing Show (London).

Rastus was dressing to go to Sunday school. He couldn't find his clothes and pestered his mother, in his efforts to discover them. On this particular Sunday he seemed worse than ever. Finally he was dressed except for his feet.

"Ma," he said plaintively, "does you know whereabouts my shoes and stockin's is?"

"Rastus," said this mother, exasperated, "yo' is de good-for-nothin'-ness nigger dat I knows. Yo' shoes am behind de do', yo' stockin's am undah de bed and yo' feets am on you. Now, see if you can mingle em."

A man leaning over the parapet of a bridge looked so glum that a kindly pedestrian stopped to make sure the gloomy one was not contemplating suicide.

"No, it's this way," explained the latter. "I like to come here once in a while to rest my face. I get tired of smiling all day at the store and I don't think I ought to be grouchy at home."

Goodyear HEAVY DUTY Cord Tires, for passenger cars, buses and trucks, are available from Goodyear Dealers in the following sizes:

30 x 3½ (Cl.)	34 x 4½ (S.S.)
32 x 4 (S.S.)	30 x 5 "
33 x 4 "	33 x 5 "
32 x 4½ "	34 x 5 "
35 x 5 (S.S.)	

For those who desire balloon tires Goodyear makes a complete line, including the HEAVY DUTY type in certain sizes

TIRE costs worrying you? Just you try the new Goodyear HEAVY-DUTY Cord Tire! Thicker, tougher, more massive. Built to stand hard knocks. The extra-heavy carcass is made of the famous Goodyear cord fabric SUPERTWIST. The stout tread is a full All-Weather. Even the sturdy sidewalls are reinforced against rut-wear. A great tire, this HEAVY-DUTY Goodyear—made especially for the man whose driving calls for extra-strength and extra-stamina. An economical tire, too, because of the extra mileage in it.

Good tires deserve good tubes—Goodyear Tubes

DEWBERRIES, N C, 32-qt crate, $5.50@6; poor stock, $3.50. HUCKLEBERRIES, N C, 32-qt crate, best, $9@9.50; poor, $4. STRAWBERRIES, home grown, 18-qt trays, $5@6.50. WATERMELONS, Fla, 18@20 lbs, 35@40c; 22@24 lbs, 40@50c; 26@28 lbs, 65@75c; 28@30 lbs, 85@90c; 32 lbs, $1 each.

LIVESTOCK

Cattle—Receipts, light; market slow. Good to choice, $10.50@10.90; mediums, 1200 to 1300 lbs, $9@9.75; tidy, 1050 to 1150 lbs, $9.50@10.50; fair, 900 to 1000 lbs, $8@8.75; common, 700 to 800 lbs, $5@6.50; common to good fat bulls, $4@7.50; common to good fat cows, $1.50@7; heifers, $5@9.75; fresh cows and springers $30@85.

Hogs—Receipts, 8 double decks; yorkers and medium weights 10c higher, other grades steady. Prime heavy hogs, $12.75@12.90; heavy mixed, $12.90@13; mediums and heavy Yorkers, $12@13.10; light yorkers, $12@12.25; pigs, $11.50@12; roughs, $9.50@9.75; stags, $5@6.

Sheep and Lambs—Receipts light; market steady. Prime wethers $6.75@7; good mixed, $6@6.50; fair mixed $5@6; culls and common, $2@4; culls to choice lambs $[illegible]@12; spring lambs [illegible]@16.50.

Calves—Receipts light; market steady. Choice veal calves, $1[illegible]@10.50; heavy and thin, $4@7.

HAY AND GRAIN

Hay—No 1 clover, $16.50@17.50; No 1 light clover, mixed, $17@18; No 1 heavy clover mixed, $15.50@16.50; No 1 clover, mixed, $16@17; No 1 timothy, $20.50@21; No 2 timothy, $16@17; standard timothy, $1[illegible]@19.

Straw—Oats $12.50@13; rye, $13.50@14, wheat $12.50@13.

Yellow Corn—No [illegible] shelled, $1.20@1.21; No [illegible] shelled, $1[illegible]; No 2 ear $1.[illegible] $1.11.

Oats—No 2 white [illegible]; No 3 white [illegible].

The Trend of the Markets

THE figures in the following table represent the approximate unweighted average prices of the commodities and grades specified. The prices are based upon quotations from the market page of Pennsylvania Farmer.

	This week	Last week	Month ago	Year ago
Butter, 92 score creamery extras (N. Y.)	$ .43	$ .45	$ .43	$ .42½
Eggs, fresh gathered extra firsts (N. Y.)	[illegible]	[illegible]	[illegible]	.28[illegible]
Chickens, broilers, extras (New York)	[illegible]	[illegible]	.55	[illegible]
Steers, good to choice (Chicago)	9.87½	9.8[illegible]	9.75	[illegible]
Hay, Number 2 timothy baled (Phila.)	18.[illegible]	18.[illegible]	18.50	27.50
Wheat, Number 2 red winter (Phila.)	[illegible]	[illegible]	1.8[illegible]	1.29
Corn, Number 2 yellow (Philadelphia)	[illegible]	[illegible]	1.41½	[illegible]
Oats, Number 2 white (Philadelphia)	.65½	[illegible]	.58½	[illegible]

NEW YORK MARKETS

June 15, 1925.

PRODUCE

Butter [illegible] tubs; creamery, higher than extras, [illegible]; do, extras, 92 score [illegible]; firsts, 88@91 score [illegible]; packing stock, current [illegible].

Eggs irregular. Receipts, 18,759 cases, fresh gathered extra firsts [illegible], do, storage packed [illegible]; fresh gathered firsts, [illegible]; nearby hennery whites, closely selected, extras, [illegible].

Cheese [illegible]

Dressed Poultry [illegible]

Beans [illegible]

LIVESTOCK

Cattle—Receipts [illegible] head; steady; steers [illegible]; bulls, $3@5.85; cows $2@[illegible].

Calves—Receipts [illegible] head; steady; veals, common to prime, $7.50@12; culls and little calves, $5@6.25; buttermilk calves [illegible]; fed calves, $6@6.50.

Sheep and Lambs—Receipts, 660 head; steady; sheep, $3@6.50; culls, $2@3.50; lambs, medium to choice, southern, $15@17; sorted, $11@15; culls, $9@10.

Hogs—Receipts, none; steady; light to mediumweights, $12.50@12.90; pigs, $12@12.25; heavy hogs, $12.50@12.75; roughs, $10.25@10.50.

HAY AND GRAIN

Feed—Quotations were as follows: City bran, $36.50; middling, $38.50 in 100-lb sacks; red dog, $50.50, nominal, in 100-lb sacks; western spring bran, prompt shipment, $36.60; standard middling, $38.60; flour middling, $44.10; red dog, spot, $50, all in 100-pound sacks, all-rail and lake-and-rail shipments; rye middling, $36; white hominy feed, $45.60, all in 100-lb sacks, cottonseed meal, 36 per cent protein, $45.25; linseed oil meal, $49.80, in 100-lb sacks.

Hay and Straw—Hay, large bales, timothy and light mixed, No 1, $25@26; No 2, $22@24; No 3, $19@21; sample, $16@18. Straw, large bales, rye, $19@20.

Grain—WHEAT, No 2 red, c i f, dom, $1.99⅛; No 1 dark spring, c i f, dom, $1.75⅝; No 2 hard winter, f o b, export, $1.79⅛; No 1 North Manitoba, in bond, f o b, export, $1.63⅛. CORN, No 2 yellow, $1.33¼; No 3 yellow, $1.31¾; No 2 mixed, $1.32½. OATS, No 2 white, 65c; No 3 white, 6[illegible]c, No 4 white, 62c; ordinary white, clipped, 65½@67½c; fancy white, clipped, 69@70½c. RYE, c i f, export, $1.20. BARLEY, malting, c i f, dom, $1.13@1.16.

FEED PRICES

The prices below are for prompt shipments based on payment on arrival of cars as quoted by the Philadelphia jobbing trade to retail feed dealers on Monday, June 15. Quotations cover solid carlots for delivery at Philadelphia or Scranton rate points.

Spring bran	$36.25@37.00
Pure spring bran	37.00@37.50
Pure soft winter bran	39.00@39.75
Standard middlings	39.75@40.25
Choice soft winter middlings	41.20
Spring flour middlings	43.50@44.50
Choice soft winter flour middlings	45.20
Red dog	49.50@50.00
White hominy feed	45.50@46.00
Yellow hominy feed	46.50@47.50
36 per cent cottonseed meal	45.25
41 per cent cottonseed meal	47.75@48.00
43 per cent cottonseed meal	49.75@50.00
45 per cent peanut meal	48.50
34 per cent O. P. linseed meal	49.70@51.70

For Baltimore, Cumberland and Williamsport rate points, subtract 20c per ton (for cottonseed meal 40c per ton); for New York, Newark rate points, add 40c per ton (for cottonseed meal 60c per ton), for Woodbury, Bridgeton rate points add $1.00 per ton; for Freehold, Toms River, Cape May rate points, add $1.40 per ton.

Heavy demand, light production. Prices advancing.

YORK PRODUCE

Eggs—30@32c dozen.

Poultry—Hens, live, 20@25c; dressed, old $1@2 springers, 65c@$1.

Butter—Country, 50@55c; separator, 50@[illegible].

Vegetables—Potatoes, 10@20c ½ pk; cabbage, old, 5@10c hd; new, 5@15c hd; lettuce 5@20c hd; celery, 5@15c stalk; tomatoes 5@10c; oyster roots, 5@10c bch; parsnips, 5c bch; onions, 10c box 5c bch; carrots, 5c bch; soup beans, 15c pt; lima beans, 40c qt; asparagus, 8@15c bch; rhubarb 3@5c bch; turnips, 12c box; peas [illegible] ¼ pk.

Fruits—Apples 15@25c ½ pk; $1[illegible]; strawberries, 15@25c qt.

Retail Grain Market—Wheat, $1.75; corn, $1.50; rye, $1.15; oats, 80c; bran, $[illegible]; middlings, $2.10.

Wholesale Grain Market—Wheat, $1.60; corn, $1.25, rye, 95c, oats, 60c, bran, $[illegible]; middlings, $40.

WOOL MARKET

Boston, June 12, 1925.

Domestic—Ohio and Penna fleeces—Delaine unwashed, 53@55c; ½-blood combing 5[illegible]@52c, ⅜-blood combing, 51c; fine unwashed, 45@46c. Michigan and New York fleeces—Delaine unwashed, 51@52c; ½-blood combing, 4[illegible]@50c; ⅜-blood combing, 5[illegible]; ¼-blood combing, 50c; [illegible] unwashed, 42@44c. Wisconsin, Missouri and average New England—½-blood [illegible]; ⅜-blood, 48@49c; ¼-blood, 47@48c.

CHICAGO LIVESTOCK MARKET

Cattle—Compared with week ago: Good to choice fed steers, 50@10c lower; [illegible] lower grades weak to 25c lower. Extreme top long yearlings, $11[illegible]; heavies, $11.60, strictly [illegible] up to $11.50. Week's [illegible] follow: Beef steers, $9[illegible]; [illegible] cows, $4.75@7.25; heifers, $7[illegible]; [illegible] cutters, $2.75@3.75; [illegible] $[illegible]@9.25; stockers and feeders, $[illegible].

Hogs—[illegible] head; mostly [illegible] bulk, 210@275-lb butchers [illegible] weight [illegible] 12.2[illegible]; 140@150-lb kind, largely [illegible] 11.85; bulk [illegible] sows, $11.1[illegible]; [illegible] killing pigs, $1[illegible] 11.[illegible].

Sheep—Compared with week ago [illegible] yearlings, 25@50c lower; [illegible] sheep steady to weak, feeders [illegible] mostly 50c lower. Bulk prices follow: Fat lambs, $1[illegible]@16; top westerns, $16.[illegible]; natives, $16, culls, $10.50@11; [illegible] wethers, $13@13.50, fat ewes, $5.50@[illegible]; feeding lambs, $13.50@13.50.

GRASS SEED—WHOLESALE PRICES

Toledo, Ohio, June 13, 1925.

Clover, cash, $17.35; October, $15.80; December $15.15. Alsike, August, $14.25. Timothy cash, $3.30; September, $4.20.

County News and Comment

Allegheny County, Pa.—Extremely hot weather. Soil very dry and packed by last rains which were very heavy. Much damage done by frost. Many reports of total losses in way of berries and early vegetables. Meadows and pasture are not making rapid growth. Wheat needs to have favorable growing weather if the crop is to be of much account here. Oats the most promising of grain crops just now.—C. K., June 4.

Armstrong County, Pa.—Your correspondents, generally reported most unfavorably of the behavior of May, in a seasonal sense, I conjecture that reports for the first third of June will be much dissimilar. In this locality we have not had a single day thus far in the month when at sometime between 6.00 A. M. and 6.00 P. M. the temperature has not climbed above ninety and in some instances above 100 degrees. While we have had a shortage of moisture the corn has made a remarkable start. Potatoes and oats have not done so well. Here and there when alsike was seeded alone it is ready for cutting and some alfalfa meadows have been cut. Pastures are good with not nearly sufficient stock to consume the grass. Wheat will be short in straw. Peaches are an entire failure and the heavy frosts and occasional freezes during May materially lessened the promise of apples, pears and cherries. Strawberries about half a crop. The community was treated to a "close-up" view of the great dirigible Los Angeles on the eve of the 8th. Much disgust is expressed among farmers over the present inheritance tax law and the writer of these notes is in the very large class of disgusted ones. Feed prices are so high that many farmers with small herds are eliminating it almost entirely for their dairy cows. There was an equally small crop of spring farrowed pigs. Wheat, $1.60; rye, $1.25; corn, $1.25; oats, 55c; potatoes, $1@1.25; eggs, 30c; good butter, 45c.—W. M. R., June 9.

Berks County, Pa.—The great heat which lasted for days came to a sudden end by a heavy downpour of rain on June 9th. It seemed almost like a cloudburst, with a strong wind, lightning and thunder accompanying it. Some trees were blown over and some chimneys struck by lightning. The cultivation of corn has started for the first time and very few farmers do any second planting, and where it is done it is to replace the few kernels which did not germinate. Oats have a good start and grow nicely. Young clover and timothy in the wheat fields coming up well. Wheat is making good headway, looks good and will be long in straw. Grass for making hay is almost ready to cut and indications promise a good crop. Alfalfa is ready to cut and some have started. The spraying of apple trees is finished for the last time. More spraying was done this year than any previous year. Spring pasture is plentiful. The spraying of potatoes has started. The surplus hay and straw is being baled and sold to make room for the new crop. All wheat was sold in order that the bins may be thoroly cleaned and fumigated. All good corn has been sold, mostly in the cob. The spring meeting of Pomona Grange No. 43 of Berks County was held at Topton on June 6 with two sessions with a record attendance. Farmers seemed to be inclined to cooperate more than ever before, especially in buying.—W. N. M., June 10.

Clearfield County, Pa.—Spring planting has been finished in good time and the soil was in fine condition. Garden crops are up and there is the usual army of insects to devour the plants, the striped cucumber beetle is here in great numbers. Our orchard power sprayer was turned on these using arsenate of lead with plenty of lime to neutralize the burning effect of the lead. During the latter part of May we had a number of frosts, some of which injured early planted corn and some fruit was killed at low altitude. Plowing for buckwheat is now in order. Pastures have been fairly good but are now getting thin on account of dry weather. Rains have been few and very light. Some of our farmers are now signing application to have their cows tuberculin tested. Good seed buckwheat is selling in the local market at $1.30; potatoes, $1; butter, 50c; eggs, 35c.—D. H. W., June 4.

Frederick County, Md.—Weather unusually hot for June. The dry weather has already shortened the hay crop and if it continues a couple of days longer will ruin the oats. Grain looks good but needs rain to make a heavy turn out; from present indications harvest will be earlier this year than usual. Considerable damage was done recently in many sections of the county by hailstorms. Corn is all planted but is not looking so good. Many are complaining that the ants and cutworms eat it off as it comes up. Some have planted whole fields over on this account. Fruit crop seems to be slightly below normal. Eggs, 30c; butter, 40c; hay, $10@12 ton; cattle, 8@9c; corn, $1.50.—R. J. W., June 8.

Gloucester County, N. J.—A hailstorm of great severity swept over a part of the best trucking section of this county on the afternoon before Memorial Day. All truck crops were destroyed and the fruit so injured that it will be unsalable. The damaged area was about one and a half miles wide and five to seven miles long. This week, we have had a spell of intense heat, that is delaying the planting of tomato plants. Most of the farm work is up to normal. Corn looks good, and most of the farmers have secured a good stand. Early tomatoes look poor, the worst in years. There will be very few early tomatoes before the first of July. Asparagus prices have held up good until the last few days. The hot weather rather than heavy supplies broke the market. Prospects are good for a big crop of early apples, but a light crop of the fall and winter varieties is looked for. Very few peach men speak of a heavy crop, even if there is no June drop.—A. K., June 6.

Indiana County, Pa.—We have been having exceedingly warm weather lately. Warm nights and very warm days. The corn has been growing very well but everything needed the rain we got last night. Clover is out in blossom and is from six to ten inches in height. Oats have kept a steady growth and look very well. Eggs are 30c; chickens, 25c; hogs, 24c, and very scarce.—H. A. N., June 8.

Lancaster County, Pa.—It is hot and getting dry. Tobacco planting is on in full swing, about the average being planted from ten days to two weeks earlier than last year. Plants are selling at $1@1.50 per thousand. Early plants brought as high as $3 per thousand. There is some tobacco in the growers' hands yet. Haying will be soon on; crop will be good. Wheat has good long straw. Fruit not plentiful. Apples a good crop. Wheat, $1.60; corn, $1.30; fat hogs, 13@14c; chickens, 22@25c; broilers, 40@45c; eggs, 31c for best white. C. R. E., June 10.

Middlesex County, N. J.—Weather conditions have been favorable for the development of most vegetable crops. Rain is needed at the present time. Alfalfa looks well but other hay crops will be short. Wheat, rye and oats in fair condition. Much corn has been planted over due to poor seed and injury by wire worms. Cabbage maggots have caused a great deal of injury. Asparagus has been a short crop to date but the price has held up well, fancy asparagus selling at from $4 to $6 per dozen two-pound bunches. The stand of potatoes is very fine but the development of the crop is not up to last year. Peaches will be about one-third of a crop, apples about two-thirds. Strawberry picking under way with a fair crop. Eggs about 35@40c.—O. G. B., June 11.

Monmouth County, N. J.—Nearly an inch of rainfall two days before the beginning of the hot spell saved the situation. The majority of potatoes started off in good shape, yet the severe hot weather seems to have checked those fields planted with seed from Virginia and South Jersey. The northern seed from Canada, Maine and New York continues to grow and hold its dark green color. At present many potato fields look rather discouraging. Many corn fields appear to enjoy the hot weather as they have made from three to five inches growth during the week. Several fields came up poorly while others which looked fairly good in the beginning have been affected by root rot. Root rot has been especially noticeable in fields of sweet corn. Germination of sweet corn was poor. Evidently a number of the later fruits were affected more by the cold weather than was thought. Many of the fall and winter varieties have at present not more than half a crop, while some of the summer and early fall ones have a satisfactory set. Vegetables are up to normal. Can house tomatoes being set. Egg prices range from 40c to 45c. Production up to normal. Majority of young birds on range growing well.—E. D., June 8.

Perry County, Pa.—We have been having very dry weather; many crops in places are suffering. There have been a few local showers but they have supplied only very small areas. In the early plowed and worked down sod, the ground has held enough moisture to make the corn grow very good during this period of extreme heat night and day, but in other places the corn is suffering. The early wheat had rain enough to give it good length but the late wheat is going to be short in the straw but one would think the wheat ought to fill well on account of the dry weather during blossoming time. The oats are well set on the ground but are in need of rain now. In spite of the difficulty to secure good seed corn the farmers took the necessary precautions and most report a good stand. Quite a bit of interest is shown in T. B. testing. Prices: wheat, $1.70; corn, $1.40; chickens, old, 20@24c; young, 29c; eggs, 28c; butter, 40@50c; milk, $2.67 cwt. for four per cent butterfat delivered at Duncannon to League.—J. L. B., June 9.

Potter County, Pa.—All fruit, except late blooming berries, has been killed or severely injured by frosts. Now for days the mercury has hovered around ninety-six in the shade; the ground is parched and dry and water supply low. Oats have a promising start and corn and potatoes are up and growing but need rain. It was not an ideal spring for poultry raising, the cold wet weather resulting in poor hatches. Reports from the potato raising sections of the county indicate nearly the usual acreage planted. Eggs, 29c; butter, 50c; seed corn, $2.50@2.60 bu.; peas, $3.75 bu.—M. C. S., May 8.

Salem County, N. J.—The white potato acreage is about the same as a year ago. Farmers have taken more interest in the planting of good seed than ever. Most of the fields are planted with certified seed or seed of very high quality. The fields look poor for this time of the year. The stalk is good, but the growth is very uneven. The hot weather is hurting the potato crop. Hay will make only a fair crop, it is being cut short this week. There is a big increase in the late tomato acreage. Farmers have cut down on the acreage of wheat and planted tomatoes. The community plant beds have been swamped with orders for the plants they have been able to grow. The demand has exceeded twice the number that can be produced. Frost destroyed a part of the acreage, which has helped to increase the demand. The Farmers' Exchange plans this year to machine grade all the potatoes they load at any of their fourteen stations.—E. M. B., June 9.

Tioga County, Pa.—There have been several very heavy electric storms. One, on May 23, accompanied by hail, was followed by a very decided drop in temperature. May 21, rain fell, freezing on until trees and shrubs were bent to the ground with their burden of ice. During the night, about six inches of snow fell, thawing the ice away gradually. Very little damage seems to have been done by the freeze. Many fruit trees were in bloom; these, with early berries, were somewhat damaged. Hay looking fine, and about two weeks earlier than last year. Corn coming fine, except an occasional field, due probably to poor seed. Many gardens just planted. Eggs, 29c; chickens, 14@20c; hay, $10.—P. W. L., June 8.

Lancaster's Tobacco

IT WAS reported in packing circles last week that several buyers intend to purchase a few more crops of 1924 tobacco before they complete their packing for this year. The amount that will still be purchased will be very little, according to these buyers, since they state that the bulk of the good tobacco has all been bought and their purchases will be confined to only a few of the best crops still in the hands of the growers who have not yet packed. And they add that they expect to buy this leaf "right."

Some fairly large sales of 1923 tobacco were made last week. With the tobacco business showing general improvement and the cigar industry going at a faster pace than it has for some months, packers state that conditions should improve.

Heat Makes Replanting Necessary

Planting of the 1925 crop is at least eighty per cent completed. Some of the plants that were set out will have to be replanted because of the extremely hot weather which killed off a slight acreage. The damage will not be great if plenty of rain falls.

The membership drive for the proposed cooperative tobacco marketing association in Pennsylvania will soon be gotten under way. Informative and educational literature is being placed in the hands of the 7500 growers who will be solicited for support and membership, and concrete plans for the drive are mapped out. The Organization Committee has met in the rooms of the farm bureau with Frank M. Payne, well-known farm leader of the East, to discuss the formation of the "Pennsylvania Tobacco Growers' Cooperative Association," as the organization will be known. A charter has already been applied for and will doubtless be granted shortly.—Garden Spot Farmer, Lancaster, Pa.

The California Fruit Growers' Exchange, the famous orange growers' cooperative organization, sold more than 50,000 cases of oranges in Europe last year. Most of this trade-marked fruit was shipped direct from California to European ports by way of the Panama Canal.—W.

New Jersey Crop Prospects

WHEAT.—The condition of the crop on June 1 was 92 per cent of a normal, indicating a yield of 19.8 bushels per acre and a production of 1,582,000 bushels, as compared with 1,369,000 bushels last year and 1,517,000 bushels, the average production for the past ten years.

OATS.—The area seeded this spring is estimated at 108 per cent of last year's acreage or 72,000 acres. The condition of the crop on June 1 was 91 per cent of a normal, indicating a yield of 30.9 bushels per acre and a total production of 2,228,000 bushels, as compared with 2,144,000 bushels last year and 2,223,000 bushels, the average production for the past ten years.

RYE.—The condition of the crop on June 1 was 93 per cent of a normal, indicating a yield of 17.8 bushels per acre and a production of 1,154,000 bushels, as compared with 1,138,000 bushels last year and 1,187,000 bushels, the average production for the past ten years.

HAY.—The acreage of all tame or cultivated hay this year is estimated at 314,000 acres compared with 321,000 acres last year. The condition of all tame hay on June 1 was 79 per cent of a normal, indicating a yield of about 1.19 tons per acre and a production of 372,000 tons, as compared with 584,000 tons last year and 482,000, the average production for the past ten years.

APPLES.—The condition of the total agricultural crop on June 1 was 68 per cent of a normal, as compared with 85 per cent last year and 75 per cent, the average condition for the past ten years.

PEARS.—The condition of the crop on June 1 was 65 per cent of a normal, and the estimated production 497,000 bushels, as compared with 624,000 bushels last year and 513,000 bushels, the five-year average production (1920-1924).

PEACHES.—The condition of the crop on June 1 was estimated at 58 per cent of a normal, indicating a production of 1,612,000 bushels, as compared with 2,480,000 bushels last year and 1,921,000 bushels, the five-year average production (1920-1924).

BERRIES.—The condition of blackberries and raspberries on June 1 was about 87 per cent of a normal, as compared to 93 per cent last year and 89 per cent, the average production for the past ten years.

WHITE POTATOES.—From information gathered from numerous sources; i. e., reporters' estimates; seed, fertilizer and machinery dealers' estimates; percentage increase in actual plantings over the growers' March intentions to plant and rail receipts of seeds in certain counties, indicate a reduction in New Jersey's potato acreage from 14 to 18 per cent, compared with last year's acreage. The largest decrease apparently has taken place in Monmouth County. The concensus of dealers' estimates of the percentage of total potato acreage in Monmouth County planted to Giants is about 5 per cent. This compares with 18 per cent. last year's estimate, and over 50 per cent several years ago. The percentage of the acreage in Cobblers is estimated at about 70 per cent, an increase of 10 to 15 per cent over last year's estimates. The remainder of the acreage is planted to late round stock. The condition of the crop on June 1 was estimated at 87 per cent of a normal, which compares with 85 per cent last year on June 1, 55 per cent on June 1, 1923, and 90 per cent of a normal crop in prospect on June 1, 1922. Movement of early Irish potatoes starts from South Jersey shipping points about the second week in July, with active shipping after the last week in July, reaching the peak about mid-August.—Bureau of Statistics and Inspection, New Jersey Department of Agriculture.

BEN FRANKLIN *said:*

"The Safest Investment is a deposit of fertility in the soil bank; it is surest and pays the best."

BEN FRANKLIN "broadcast" these words of wisdom 'way back in the 18th century, yet at the present time the waste of farm fertility is appalling. Authorities have estimated that from ⅓ to ½ of all our barnyard manure is absolutely wasted, the annual loss totaling about $800,000,000. Nor is this loss confined to poorly managed farms; it occurs on many that are operated efficiently otherwise.

What is the solution? It is not enough simply to put manure on the fields in haphazard manner. A Nebraska farmer who kept records for 3 years discovered a difference of 252 bushels of corn in favor of machine spreading over pitchfork spreading. This on two 6-acre plots. Think what a difference is possible on your acreage. You cannot afford to overlook so important an item!

The local McCormick-Deering dealer can show you the McCormick-Deering Manure Spreader in a size to fit your farm. We recommend purchase and regular use of this money-making machine to restore and maintain the fertility of your crop acres.

DAIRY

A. A. BORLAND,
Staff Contributor and Adviser
Head of the Department of Dairy Husbandry, Pennsylvania State College

The Right Proportion of Nutrients in Milk Ration

What is the proper proportion of digestible nutrients in a milk ration? I have ensilage, alfalfa hay (very coarse). The grain available is brewers' grains, bran, hominy, linseed meal (o. p.) and gluten. What proportionate amount of salt should be mixed in? Is charcoal or bone meal desirable, how much of each? I have been feeding as follows: Two parts bran, two parts brewers' grains, one part hominy, one part gluten, one-half part linseed. As I have a large stock of these grains on hand in the above proportionate amount, I would prefer to change as little as possible; do you think this is enough protein? What is the formula of digestible nutrients in brewers' grains? Should the fat content be high, low, or medium?—D.

The proportion of digestible nutrients in a milk ration for dairy cows would depend upon the character of the roughage. If roughage such as alfalfa hay and silage, the following grain mixture would be satisfactory: 100 pounds of corn meal, 100 pounds of ground oats, 100 pounds of wheat bran, 50 pounds of linseed oil meal, and 8 pounds of blood flour. If you had one pound of salt for every hundred pounds of grain, you will probably have approximately the right amount. Charcoal or bone meal or other mineral preparations are usually unnecessary when the cow gets plenty of good leguminous roughage such as alfalfa or clover hay. The best way to feed these minerals, however, is to mix three or four parts of finely ground bone meal with one part of salt and put it into a box where the cattle can have access to it at will. They will then get what they need.

Fuel for the Animal Machine

Your present grain mixture of two parts wheat bran by weight, two parts brewers' grains, one part hominy feed, one part gluten feed and one-half part linseed meal ought to be fairly satisfactory to feed with such roughage as leguminous hay such as clover and alfalfa, and corn silage in addition. If your roughage is timothy hay and corn silage you will need more high protein concentrates such as linseed oil meal and cottonseed meal.

The digestible nutrients in brewers' grains are as follows: 21.5 per cent of digestible protein; 30.5 per cent of carbohydrates, and 6.1 per cent of fat. The fat content of the grain mixture may be either high, medium, or low, depending on whether the carbohydrate content is correspondingly high. Carbohydrates and fat are used for the same purpose in the animal's body. The purpose of these nutrients is to furnish energy to the animal machine. These nutrients are burned up in the animal's body very much as gasoline is burned up in a gasoline engine to furnish the energy to run the animal machine. Therefore, it makes little difference whether the animal gets carbohydrates or fat so long as there is a sufficient amount of the two to supply the animal machine with fuel.—A. A. B.

With the County Agents

COUNTY AGENT W. A. ROSS reports that Cameron County is now ready for the area testing plan for the eradication of tuberculosis. With very few exceptions, every cattle owner in the county who had not previously signed a blank for the test, was visited, and as a result of this survey and the work previously done, ninety-six per cent of the dairy cattle owners have now made application for the test.

• • •

A clean county within a year, which will be an attraction to buyers of cattle, is one of the possibilities for the improvement of dairy conditions in Susquehanna County, according to G. P. Miller, county agent. But five townships in the county remain to be canvassed for signatures.

• • •

County Agent C. K. Hallowell reports the organization of the first potato spray ring in Philadelphia County. This community spraying ring includes eight farmers in the vicinity of Torresdale who have listed seventy acres in potatoes to start with.

• • •

The Iona and Prescott spray ring in Lebanon County have held meetings and are planning on active work, according to County Agent A. C. Berger. Both rings are prepared to start the sprayers when needed.

• • •

County Agent D. R. Pheasant states that at a meeting of the Academia Pig Feeding Club in Juniata County, good growth of pigs belonging to the members was reported. Among the activities planned by the club members is a trip to State College. In order to raise money for the benefit of the club the boys are planning to hold a festival on Saturday evening, June 20.—A. L. B.

New Law to Protect Dairymen

WEIGHERS, samplers and testers in the employ of milk stations, cheese factories, creameries and condenseries in Pennsylvania must be examined by the Pennsylvania State College and licensed by the State Department of Agriculture, according to the provisions of a new milk sales law which goes into effect August 4, 1925.

It is believed that the new regulations will put an end to the losses which have been suffered by producers thru the carelessness, ignorance, or crookedness of buyers. A severe penalty is provided by the law for the under-reading, over-reading or other manipulation of the butterfat test.

"What was the row with Alec?"

"Well, when he heard that my dress bill was over $10,000 a year he broke off our engagement—and married my dressmaker."—London Mail.

OBERCO
[PROTEIN-MINERAL FEED]
for Hogs, Poultry & Dairy Cattle

Poultry, swine and dairy cattle must have protein and minerals if they are to get the best from their farm ration. Mix Oberco with the feed you are using and see the difference.

Write for details. Practical poultrymen, hog raisers and dairymen have tried Oberco and it has produced surprising results. Write for booklet.

Veterinary

Conducted by W. C. Fair, V. S.

Advice thru this department is free to our subscribers. Each communication should state history and symptoms of the case in full; also the name and address of writer. Initials only will be published. We cannot make reply by mail. This is one of the most valuable columns of the paper and we invite readers to make use of it. Clippings from this column, when properly preserved and classified, make one of the most valuable medical symposiums a farmer-stockman can obtain.

HOLE IN SIDE OF TEAT.—I have a two-year-old heifer, freshened the middle of this month, but she has a hole in side of the teat situated about half way up the teat. Can this opening be closed, and if so, how?—G. W. B., Clarks Mills, Pa. Either you or your veterinarian will find it almost impossible to close this opening until she is dry, then it is easily done without infecting the quarter of udder.

BRUISED HEAD.—I have a cow four years old, who sometime ago got a small lump upon her head. How she got it I don't know, but since then it has swollen until her head is almost twice its ordinary size. Until a few days ago she made a gurgling noise when she breathed, now she does not. We have no veterinarian near here and I am at at a loss to know what to do.—J. Y., Hawley, Pa. Doubtless her head has been bruised, the result may be an abscess, which will open, or if it points, then open and allow the pus to escape; then swab out cavity with tincture of iodine daily. If left alone she will perhaps recover, but turn her out to pasture, without shade.

INDIGESTION.—I have a horse that is always thin and low in flesh. His appetite is good; sheds old coat all right, but there seems to be too much motion in the bowels. Can you tell me what to do for him?—C. J. S., Hampton, Pa. Feed him one part dry wheat bran and six parts oats. Mix equal parts powdered gentian, powdered fenugreek, powdered cinchona, bicarbonate of soda, common salt, together and give a tablespoonful at dose three times a day.

BRUISED TENDON.—The cords of right hind leg of one of my horses are some swollen, but he is not lame. Have been advised to blister the leg, but before doing this, I would like your advice. We need his work.—J. H. T., Morton, Pa. The writer considers it not good practice to apply medcine which acts as a blister to a bruised leg of this kind. If the tendons had been sprained a blister might be necessary, but milder remedies will give you better results; besides you can work the horse while you apply them. Following the application of an active blister, always rest the animal. Dissolve one-quarter pound of acetate of lead in one gallon of cold water and wet swollen leg three or four times a day. Occasionally, shower leg with cold water. Does he not strike his shin and tendons with opposite foot while traveling?

TWIN CALVES.—In the case of twin calves being male and female will both be likely breeders?—R. H., C., Erie County, Pa. When one calf of twins is a male, the female is seldom known to breed; however, the male will generally prove to be a calf-getter. It can be safely stated that such a calf as yours will prove barren, they are called "Free-Martin."

The man of only one idea may travel far, but he never seems to enjoy the scenery.

It never does a smile any harm to crack it, nor are wrinkles ugly if they are the tracks left by smiles.

Don't be afraid to laugh. The human face can stand a lot!

The man who took the advice of everybody met the fellow who never took any one's advice, in the bread line. Tho the day was cold, neither had an overcoat.

Chrysler Six Endurance Winning New Friends

It would interest you to read the thousands of letters Chrysler owners have written about their cars.

Naturally they speak of performance and riding qualities with the utmost enthusiasm, because the Chrysler Six delivers results that are not equaled on the market today in any price field.

But of all the car's superiorities these writers place the main emphasis on Chrysler sturdiness and absolute dependability.

This is important to every buyer who chooses his car carefully because in the long run endurance counts even for more than performance.

To give real value—to earn lasting popularity—cars must stand up.

Tens of thousands of owners have driven the Chrysler Six for months on end. They report that the car "does its stuff" with as much reliance, as much eagerness, after 30,000 miles as it did the day it was delivered.

Owners prize the brilliance of Chrysler Six performance, its high-gear speed range of from 2 to better than 70 miles an hour, its flashing pick-up, its riding and driving ease, its economy, its comfort—

But they prize even more highly the fact that the car is unsurpassed for stamina—that it stands up—that it delivers unfaltering, unfailing service.

These are the results of Mr. Chrysler's understanding of transportation needs; his knowledge of the value of dependability in any mechanical product.

These are some of the reasons why the Chrysler Six sales are mounting to new high records each month.

If you are not yet familiar with this new kind of car, your nearest Chrysler Six dealer is eager to give you any kind of a demonstration you desire.

CHRYSLER MOTOR CORPORATION, DETROIT, MICHIGAN

Be sure to see the New Chrysler Six Coach—Practical utility of coach body, with more of closed-car luxury and comfort—Upholstery exclusive pastel blue and gray plush—Unusually wide doors—A distinct advance in closed-car beauty and value—Price $1545, f. o. b. Detroit, tax extra.

Legumes in South Jersey Soil

Vetch, Clover and Rye Are Good Combinations

OUR most valuable cover crop is winter or hairy vetch. It is hardy, well adapted to our sandy loam, furnishes an enormous amount of organic matter, and, if plowing is delayed at maturity, it will not prove as troublesome as overgrown rye. In addition to vetch we use crimson clover and rye. The combination used and the amount of seed per acre depend upon the time of planting, the condition of the soil and the comparative prices of the seed.

We attempt to put in our cover crops at the last cultivation of the growing crop. The first seeding is made in the field corn about the fifth or tenth of August. This consists of crimson clover alone or a mixture of clover and vetch.

We hesitate to sow very much vetch so early in the season, because it is more susceptible to winter killing than later plantings. When the clover is sown alone twenty to twenty-five pounds of seed are used per acre.

Proportion of Vetch Used

In combination with vetch we use fifteen pounds of clover and nine or ten of vetch. As the season advances the proportion of clover is decreased and the vetch increased. One and one-half pounds of vetch will replace a pound of clover. From the second week in August until the first week in September many fields are sown to vetch alone at the rate of thirty pounds per acre. A good mixture consists of ten pounds of crimson clover, ten pounds of vetch and one-half bushel of rye.

During the second and third weeks in September vetch and rye are used at the rate of twenty pounds of vetch and three-fourths bushel of rye. After that time rye alone is used at the rate of two bushels per acre.

Rye can be sown until late in November. Even if it will not germinate until the following spring, it will still furnish green growth for plowing under, especially for a late planted crop like sweet potatoes. Crimson clover and vetch will not do well on poor soils. Poor soils may have to be built up with stable manure and non-legumes or such summer legumes as cow peas and soy beans before vetch and clover can be used.

We make a special effort to sow the leguminous cover crops on all fields that have received an application of manure in the spring. Likewise we often apply a coat of manure on the cover crop during the winter, for we find that a combination of green manure and stable manure is always more profitable for some crops like lima beans than either alone.

One City's Needs

THE average distance of shipment of the fruits and vegetables sold on the New York City market is 1500 miles. California shipped more of these commodities to New York last year than any other state, tho Florida was not far behind. These two states alone accounted for one-third of the total supply in the New York market.

Fresh fruits and vegetables are the most important traffic at the Manhattan produce terminals. About 150,000 freight cars are required to transport the quantity of these perishables consumed each year in the New York district. If placed end to end, these cars would make a train over 2000 miles long, with the engine in New York and the caboose in Denver. This contrasts with a total of only 60,000 carlots of butter, fish, eggs, fresh meats, dressed poultry, combined.

Legume on All Manured Fields

We always attempt to have the cover crop plowed under at least two weeks before the following crop is to be planted. Furthermore, we always try to have the plowing done before the cover crop has began to head. Otherwise it fails to rot quickly and dries out the soil.

Crimson clover is a good catch but about seven times out of ten it will not be there after winter gets thru with it. And that is the reason we always use a combination of rye and vetch. We are sure to have some kind of cover crop when they are used, too.—C. A. U., Atlantic County, N. J.

Pennsylvania's Shorthorns

OF THE 2276 records of Milking Shorthorn cows that have been accepted and published in the Milking Shorthorn Yearbooks, compiled and distributed annually by the American Shorthorn Breeders' Association, 449, or practically twenty per cent have been sent in from the Keystone State, and 278 of those records or over ten per cent of all the records of Milking Shorthorn cows that have been accepted for the Record of Merit to date have been made and sent in from Glenside Herd, owned by Mrs. L. D. May, Granville Summit, Pa.

Doris Clay for many years the champion Milking Shorthorn butter-fat producer in this country, but now in seventh place in milk and fat yield among the leading Milking Shorthorn cows of the United States, still stands at the head of the fat producers in Pennsylvania with 17,241.5 pounds of milk and 653.67 pounds of fat. Rose of Glenside leads all Milking Shorthorn cows of the state in milk yield and is third among all the cows of the breed in the country in this respect with a record of 18,075.2 pounds of milk and 624.76 pounds of fat.

The senior four-year-olds are led in both milk and fat production by Rose Bradford, owned by Howard Baxter, Granville Summit, with a record of 12,423.1 pounds of milk and 517.7 pounds of fat.

Records by Younger Animals

Junior four-year-olds are led in fat production by Red Lily, owned by the George E. Tener Estate, Sewickley, Pa., with 8462.8 pounds of milk and 362.15 pounds of fat; and in milk flow by Red Bess, owned by Frank Brace, Columbia Cross Roads whose record is 10,668 pounds of milk.

The George E. Tener Estate owns Walgrove Graceful who leads the senior three-year-olds in milk and fat yield with 11,293.7 pounds of milk and 470.20 pounds of fat.

Edith Cranford, owned by Howard Baxter, has the high record for a junior three-year-old with 9379 pounds of milk and 400.65 pounds of fat; and Lottie Clay, owned by May & Otis, Granville Center, leads in milk flow with 10,373 pounds of milk [illegible]

The Timely Question of Thinning

Experienced Orchardists Find That Pruning Raises the Standard of Production

By S. W. FLETCHER
Staff Contributor and Adviser

THE June drop is over in most sections of the state, and there are a few fortunate men who are now considering whether or not it will pay to thin the crop of fruit that remains. If this is heavy, usualy it will pay to thin provided labor can be secured at a reasonable rate. Very little, if anything, is gained by thinning by way of insuring annual bearing, especially in the apple, because the fruit buds for next year's crop are mostly formed before the operation of thinning is begun.

The advantages are mainly to the crop of the current season, and to the protection of the tree from breakage. Thinning always pays if the load is heavy enough to cause serious danger of breaking the limbs. Props are a poor corrective for an over-loaded tree and faulty training.

Value Grows with Size of Fruit

If thinning only to prevent tree breakage, it may be more practicable to wait until the fruit is sufficiently matured that the thinnings may be sold. This is especially true of early apples. Starrs and Yellow Transparents, picked when at least two and a half inches in diameter, usually sell well. They are unripe and sour,—but since they are sold for cooking purposes, not for dessert, no objection can be raised to this practice.

The main advantage of thinning is an increase in size. Every quarter inch added to the size of an apple or peach may increase its sale values thirty or fifty per cent. A three-inch apple is worth more than twice as much as a two-and-one-quarter-inch apple. Size is money and thinning gives size. We must not forget, moreover, that the major cultural operations—good pruning, good feeding, and an adequate moisture supply thru tillage or mulching—all have the same objective.

Incidental benefits of thinning are the more effective control of pests, because the fruits are more perfectly covered with the protective chemicals; the saving of labor, for the crop of fruit on the thinned tree may bulk almost as great as the crop on the unthinned tree, but perhaps with only half as many fruits to pick; and possibly a slight gain in color.

Thinning should be done as soon as possible after the normal June drop. This year, when the injury to blossoms from cold has been widespread, there is likely to be prolonged dropping of injured fruits. Thinning shears may be used on varieties with long stems, like the Rome, but on short-stemmed varieties, like the York, and on peaches, hand thinning is best. Thin at least enough so that fruits will not touch; beyond this point the distance must be determined by the variety and the vigor of the tree. Grimes and Winesap, which tend to run small, should be thinned harder than Yorks and Staymans. The distance will vary from four to ten inches.

Cost of Thinning May Save Money

In large apple orchards thinning gangs are at work from the middle of June until within a few weeks of harvest, perhaps going over the same trees two or three times. For apple trees capable of bearing fifteen bushels or more, it will cost fifty cents to a dollar a tree if the load is heavy. That seems like a lot of money to pay for merely pulling off part of a crop and dropping it on the ground. Yet the harvesting expenses will be materially reduced, and the fruit undoubtedly will be worth more money. It is a question, not only of possible benefit to be derived, but also of expediency, whether the grower has the time and money to invest. Some have not, and hence are forced to omit an operation that they know would be beneficial.

Pruned Trees Better Producers

All cultural operations affect the size of the fruit, but pruning most of all. The difference in this respect between a neglected, thick-topped apple tree, and an open-pruned tree, is often very striking. Four weeks after the blossoms drop the fruits on the open-pruned tree will be larger than the fruits on a brushy tree, and the difference will increase as the season advances.

Hand thinning of the fruits is tedious and expensive; it is very much easier and cheaper to do as much thinning as is practicable with the pruning tools.. In the case of peaches we have a very definite means of controlling the size of the crop by the amount of wood left on the tree. The same is true of apples, tho to a less degree.

Twenty-five years ago practically no thinning was done except on a limited number of peaches and plums. Now peaches are thinned almost universally, when overloaded, and the practice is becoming quite common on apples. This is evidence of the steadily advancing standard of what constitutes "good fruit."—S. W. F.

Cooperative Potato Association

Growers in Schuylkill County Have a Successful Seven-year Old Organization

By W. L. BOLLINGER

FARMER'S cooperative organizations commonly thought to be a big factor in farm life in the West only, have recently become of great importance to farmers in the East. For the number of farmers in its territory, few cooperatives have done a larger volume of business or done it more efficiently than the Schuylkill Cooperative Potato Growers' Association of Schuylkill County, Pa.

Organized in 1918

The association was organized in 1918 by men connected with the Food Administration during the war. These men had only a vague conception of what a potato growers' association ought to do, but they felt that on general principles a county growing as many potatoes as Schuylkill, ought to have an association. They did suggest that the association might sponsor variety tests and the buying of seed potatoes, but farther than that they would not venture. With this hazy idea of the functions of an association, a group of farmers were willing to make the start.

Soon after its organization and incorporation the association began to buy fertilizer and spray materials. It had very little to do with the conducting of potato variety tests and relatively few seed potatoes were bought at any time thru the association. Its purchases of fertilizers and spray materials, however, justified its existence. When the break came in fertilizer prices after 1920 the association was the first agency in the country to give the farmers the benefit of the lower prices.

Even when market conditions were most favorable and conducive to the greatest success of cooperative associations, this organization did not do the volume of business its prices warranted. Just once previous to 1924 did the fertilizer tonnage for a season reach the 1000-ton mark. Usually it was nearer half that mark. The failure of the association to do the volume of business its sponsors hoped for was due largely to the fact that it did not secure the cooperation of established farmers' organizations such as the Grange. So it was that in 1924 a joint meeting of the directors of the association and a committee of the Pomona Grange was held for the purpose of finding some means of presenting a united front for cooperative buying in the future.

An Agreement Reached

The understanding arrived at in this meeting was something like this: The Potato Growers' Association would maintain its own organization as in the past, charging its members one dollar dues per year and having a paid secretary and business agent as before. The Grange would retain its purchasing agents and make any financial arrangements with them they saw fit. The directors of the association and a committee of the Pomona Grange would secure bids for the supplies

[to page 19]

Keystone State's First Boy's Forestry Club

Sixteen members comprise the first 4-H forestry club in Pennsylvania, the Loyalsock Forestry Club of Sullivan County. Each club member planted 500 trees of eight different species this spring; 500 more trees will be planted next year.

The boys in the picture are Ulmon Hatch, Clyde Norton, Ivan Norton, Roscoe Burgess, Victor Cott, Leo H. Lewis, Egbert Axlesworth, Corbin Lewis, Jacob Yeagle, Stafford Randall, and Russell Edler, all of Forksville; and Walter L. Norton, Irvin Davis, and Ray Kanally, of Hillsgrove.

Vol. 91, No. 26. Phila., Pa., June 27, 1925 Whole No. 1467

OUR JOB is to serve our readers. Whenever you are puzzled write to us and we will help you if we can.

Not failure; but low aim is a crime.—Lowell.

Wide Extremes

THE figures showing the results of a year's work of a cow tester with twenty-four herds in Montgomery County, Pa., are probably typical of a like number of herds anywhere, so far as variation is concerned. The lowest cost of producing one hundred pounds of milk is accredited to a herd of six cows which produced it at a feed cost of $1.13. This herd also holds the record for low butterfat cost, the cost per pound being 29 cents. The average milk production per cow was 6043 pounds. The cost of producing a pound of butterfat from another herd was 62 cents, while the cost of producing a hundred pounds of milk was $2.23. The highest cost of producing milk was found to be a herd of twenty cows showing an average test of 5.7 per cent butterfat. The milk from this herd cost $2.50 per hundred pounds. The averages for the twenty-four herds were as follows: Fat, per cent, 3.7; milk, pounds, 7563; feed cost per hundred pounds milk, $1.55; butterfat, per pound, 42 cents.

Only the Beginning

THE real progress that is being made toward the eradication of bovine tuberculosis in Pennsylvania should blind no one to the fact that this first great clean-up campaign is only the beginning of what must be a never-ceasing war against this dreaded disease. After the tuberculous stock have been removed from a herd, steps must be taken to insure that the remaining animals shall be kept in healthy surroundings, and that no diseased stock shall be brought in to infect them.

While this problem of preventing disease from getting a fresh start is very much simplified where all the herds in a certain area have been tested, neverthless the dairymen will have to be on the watch constantly. The installation of modern barn ventilation systems, individual drinking cups and other sanitary equipment will help keep the stock in condition to resist disease. A strict quarantine against all untested livestock and animals of unknown origin will keep them from exposure to infection from the outside. An occasional retest will then prove just how effective are the precautions that are being taken.

The experience of men who have tested on the individual, accredited herd plan has shown that it is a comparatively simple matter to keep a herd clean after it has been tested two or three times. The county-wide campaigns now being carried on against the disease in Pennsylvania should make it still easier to keep the plague under control. The fewer are the possible sources of infection, the less is the danger.

Institute of Cooperation

THE newest thing proposed in the line of an educational institution is the American Institute of Cooperation which will open a four-week term in the University of Pennsylvania July 20th. No line of work among the small producers of the nation has received more agitation during the past five years than that of cooperation, but it has been found that there is a lack of knowledge and understanding concerning the fundamental principles of effective business team work. It is for the purpose of arriving at and disseminating these fundamental principles that the proposed institute was conceived. Teachers, experts and experienced men from every branch of agriculture and from every part of the country will be brought to the institute to assist in the educational work. It is recommended that every cooperative association, in fact every community, have a representative attend the institute so that he might take back to his neighborhood the facts and inspiration gained at these sessions. A full program and other information may be had by addressing C. W. Holman, 1731 Eye St., Washington, D. C.

"Won't You Please Reform?"

THE eratic and more or less disastrous action of the wheat market between January first and April first has at last been explained. The explanation is giving the apologists for and the defenders of the existing order of things a good deal of discomforture. Certain men have openly acknowledged that they purposely manipulated the markets—buying and selling millions of bushels of phantom wheat for the purpose of forcing the price up or down as they wished. So brazen is the explanation and so harmful were the effects that the apologists and defenders of the "system" are begging the Chicago "wheat pit" to clean up before the wheat growers can move upon Congress and threaten the country with more "radical legislation." Nothing raises a louder cry from the big gamblers in necessities, and certain other lines of "big business," than a move on the part of farmers to obtain laws which would adequately protect agriculture. This class is just now more worried over the possible results of the wheat market scandal than they are over the morals involved.

"Too Many of Us"

A CONTEMPORARY trade journal has been doing some figuring and has come to the conclusion that there are too many persons engaged in farming. The writer assigns three people to each of the 7,000,000 farms which makes 21,000,000 farm producers. This number subtracted from a total population of 120,000,000 people leaves 99,000,000 persons to be supplied from the surplus from the 7,000,000 farms, or thirteen persons per farm. He argues that this number is too small to make it possible for the average farm to make a profit in supplying its needs, and that a foreign market is absolutely necessary if American farms are to be run to capacity.

We believe the latter contention is true, but the logic of the article as a whole may be questioned by many. As a matter of fact many of the 7,000,0000 places listed as farms are not farms at all in the sense of being producers for the market. This unknown number when subtracted would reduce the actual farms materially and automatically increase the number of consumers per farm. However, the number of consumers per farm would still remain too small to make farming pay for all engaged in it, if all really made their entire living by farming. But another proportion of the 7,000,000 farms are mere places of residence, producing a few chickens and a few vegetables for those who live on it, while the occupants make their chief income at something else. While there are no figures to fortify our contention, we are of the opinion that not more than one-half the occupants of the 7,000,000 places listed as farms make producing for market their chief business. If this be true, it would increase the number of consumers per farm from thirteen to twenty-six. Is that enough? We think not if the markets are over-supplied so that gluts force prices to low levels.

Referred without Comment

UNDER this heading we publish an editorial on some current topic taken from the columns of a contemporary paper. Its publication does not necessarily mean that the sentiments expressed are the sentiments of Pennsylvania Farmer.—Editors.

THE BURDEN OF TAXATION

The U. S. Bureau of Census has recently made public some exceedingly interesting figures on the subject of state taxes and state debts.

In comparing the years 1919 and 1923, it is shown that the state government cost has increased in every one of the states, the increase in New York, for example, being from 63½ millions to 108 millions of dollars, while West Virginia increased from $4,600,000 to $16,800,000 and Iowa increased from $10,900,000 to $40,500,000.

The same report gives a comparison between state debts in each state in 1919 and 1923. The only state which has decreased its debt is Massachusetts. The largest increases in state debt recorded were in the states of Oregon and South Dakota. South Dakota holds the record as to per capita debt. In 1923 it had a debt of $90 per capita. In Iowa the state debt increased from 25c to $6 per capita.

The grand total of all the state debts in the United States increased in this period from 744 to 1419 million dollars, while the annual cost of state government increased from 542 to 933 million dollars.

It seems to us the time has come to take stock of this situation and to call a halt.

Many thousands of farmers are already in distress because of the amount of their taxes. So also are the most of the railroads as well as large numbers of this country's other institutions and about the only ones who apparently are indifferent are the members of the various state legislatures and those for whom state jobs are thus made.

The government at Washington is setting a pretty good example thru President Coolidge and Director of the Budget Lord, and, while we are hopeful that this good example will prove contagious, there does not seem to be very much ground for that hope.

We believe therefore that the time has come, as we have already said, to call a halt.

We are looking for a Moses to lead us out of bondage.—Price Current-Grain Reporter, **June 10, 1925.**

Washington Letter

WITH REFERENCE TO THE TARIFF.—Pointing out that our farmers who produce crops for export are subject to fortuitous circumstances in other parts of the world over which we can have no control, the President maintains that as a nation we should be independent as far as we may of overseas imports of food, and it is most important that our farmers, by diversification, shall have an opportunity to adjust their crops as far as possible to our domestic rather than foreign markets, if we would attain higher degrees of stability in our agriculture.

In taking this position President Coolidge follows closely that taken by the farm organization representatives during the hearings when the Fordney-McCumber tariff act was under consideration by the congressional committees.

CHANGES IN DEPARTMENT OF AGRICULTURE.—The proposed reorganization of the personnel of the Department of Agriculture to meet the approval of Secretary Jardine, is making some progress. Charles J. Brand, marketing specialist, has resigned to become executive secretary of the reorganized National Fertilizer Association. Dr. E. D. Ball, director of scientific research, whose resignation was accepted by Secretary Jardine some time ago, is still with the department, but is expected to leave soon. L. H. Goddard, another specialist who was called to the department by the late Secretary Wallace, has resigned and will return to his farm at Washington Court House, Ohio. It is expected that several bureau chiefs who were close to Mr. Wallace will be replaced by other appointees whose views are in line with those of Secretary Jardine.

McNARY-HAUGEN BILL NOT DEAD YET.—Notwithstanding the prospect that there will be no wheat for export, advocates of the McNary-Haugen bill in the Middle West are said to be actively raising funds and developing propaganda to continue the fight for this proposition when Congress meets in the fall. The friends of the Yoakum cooperative marketing board plan are spending considerable effort and money in propaganda work. Congressman Dickinson, of Iowa, is stumping the West for his combination foreign export corporation-cooperative marketing board bill. The Capper-Haugen cooperative marketing bill, recommended by the President's commission and strongly favored by Secretary Jardine, has strong administration support, and the backing of Pacific Coast cooperatives. It is not thought that the Yoakum or Dickinson scheme has any chance, and that the fight next winter will be three cornered between the Capper-Haugen and the McNary-Haugen bills and those who are opposed to any legislation affecting cooperatives.

MUSCLE SHOALS COMMISSION.—Chairman McKenzie and other members of the commission have expressed the belief that the Muscle Shoals project should be treated as a nitrate proposition, as was intended by Congress that it should be, and that a temporary power lease would hinder the development of the nitrate feature. This stand on the part of the commission gives good grounds for the belief that the great Muscle Shoals project will be operated by the government or under lease primarily for the production of fertilizers in time of peace and for national defense in time of war.

POSTAL RATES.—The increased postal rates are not meeting expectations. They will not meet the $68,000,000 postal pay advance, according to present indications. The increase in parcel post rates, and especially the unwarranted service charge on perishables, is evidently tending to discourage such shipments thereby reducing the revenues while the overhead expenses are going on without reduction.—E. E. Reynolds.

Harrisburg Letter

TO PUSH CONSOLIDATION.—Plans for the state Department of Public Instruction in the reorganization of the educational branch of the state government not only call for a greater measure of attention to vocational education courses in township and borough high schools and in as many other schools as it can be emphasized with the means at hand, but for consolidation of rural schools where advantageous. Much of the success attending the consolidation projects of the last three years has been largely due to Dr. Leo L. Driver, who will hereafter devote himself to this phase of work and will shortly begin new tours. A special report upon results and opportunities for consolidation will be made with a view to meeting some of the criticisms and objections to merging of schools. As the new schools are being built there is more attention paid to attractive surroundings.

TOMATOES IN TOBACCO FIELDS.—One of the interesting matters turned up in state crop reports from southern Pennsylvania counties has been the fact that owners of farms on which tobacco was formerly extensively cultivated have this year put in tomatoes and other vegetables for which there is a ready demand from canneries. This is especially true in some sections of York County, where the canning industry has been expanding. In Lancaster County there is not so much change in spite of market conditions.

It isn't only the farmer's problem.

BEETLE BAN ON.—Men in charge of enforcement of the Japanese beetle quarantine in southeastern Pennsylvania will be reinforced in a short time by the state's fleet of automobiles bought for this purpose. This will give greater mobility in the patrolling of roads and the stopping of shipments of vegetable products likely to spread the infestation. Orders have been given to prosecute where necessary.

BULLETIN ON BORERS.—The life of and the way to bring death to corn borers is treated in a bulletin just issued by the Department of Agriculture. It is one of a series and was written by Dr. C. H. Hadley, director of the Bureau of Plant Industry. The state quarantine on the borer is centered in northwestern Pennsylvania.

PLANNING ON POWER.—State administration people are commencing to bring advantages of the giant power program to the front again and it is very evident it will come near being an issue in next year's campaign. Some special attention is being given to the beneficial effects of more power on farms and in communities where housing conditions are backward. Much is going to be heard in rural communities during the coming winter on power possibilities. Another matter which is getting administration attention is the recruiting of children for work on truck gardens in New Jersey and a jealous eye will be kept on some communities in Pennsylvania when the canning season starts.

OIL LOCAL ROADS.—Between now and the first of July State Highway Department oiling crews have been ordered to stick to earth roads. The local roads are now getting attention for dust laying. The work is being done unusually early. Contracts for new construction since the first of June have run considerably beyond a million dollars.

UP TO THE MILLERS.—State Bureau of Markets people have decided, as the result of inquires conducted as to chances for improvement of home markets for wheat that if millers will do their share and pay a premium for good wheat and do uniform milling a first class blended flour can be worked out in Pennsylvania, assuring a steady market for growers and meeting the demands of the bakers. This year's crop is declared to have prospects of high quality and large yield, affording a chance for what is termed a try-out.

TO TEST NORTON LAW.—According to word coming here people in some sections of the state are planning to make a test of the Norton law punishing the taking of fruits or vegetables. It is claimed the law does not afford protection to all farmers, while some people, who fear they may get into trouble by picking flowers, want decisions.—Hamilton, Harrisburg

New Jersey Letter

POTATO COMMITTEE BUSY.—The dealers' committee which grew out of the operation of the State Potato Improvement Committee this spring, has been active in recent weeks to promote the standardization of potatoes shipped out of New Jersey this season. At a recent meeting in Princeton it completed plans for the employment of two inspectors with federal-state training, who will visit loading stations from now on to see that grade requirements are known to all growers and shippers. The committee is composed of Ira D. Baird of Freehold; A. F. Reed, of Tennant; S. E. Bennett, of Prospect Plains, and W. B. Duryee, newly appointed State Secretary of Agriculture.

DESIGNATE INTERSTATE ROADS.—New Jersey highway officials joined with those of other eastern states at a meeting in New York City on June 15 to define the important interstate roads and arrange for their uniform designation as United States highways. New Jersey, with its excellent roads is actively back of the program. The plan is an outgrowth of a conference this last spring of the Joint Board of Interstate Highways, and the meeting last week was one of several regional conferences which will enable New Jersey highway officials and those of neighboring states to tie up the designated eastern highways with those thruout the country. New England will hold a similar conference shortly.

RURAL SCHOOL TAXES.—The rapidly increasing school tax in New Jersey has called forth a meeting of the Rural School Committee of the New Jersey Federation of County Boards of Agriculture. The committee will meet shortly to work out a study of rural school taxes and several other important phases of the rural school situation in New Jersey. For some time requests have been made to the State Office of the Farm Bureau for such a study, with a view to placing the responsibility for the rapidly increasing school tax upon the proper sources.

STRAWBERRIES RIPEN RAPIDLY.—The warm weather of early June matured strawberries rapidly thruout the state and the marketing season came on with a rush. The crop is smaller than a year ago, due to decreased acreage and frost damage early in the season. The condition of the fruit under rapid maturity has been good and altho prices have fluctuated sharply, depending upon the weather and the supply, the season promises to be a better one for strawberry growers than in the last few years.—B.

New York Letter

DAIRYMEN'S BIGGEST MEET.—The meeting of 2000 representatives of the 65,000 members of the Dairymen's League in New York this week will be the biggest event of the kind ever held. Two features of the program mark new developments in the growth of this greatest dairy cooperative. They are the address by Francis H. Sisson, one of the leading bankers of New York, and the address to the women of the League by Dr. Ruby Green Smith, secretary of the New York State Federation of Home Bureaus. The new Home Department of the League aims to interest and educate farm women in cooperative principles and to bring recreation to the farms of the state.

LIVESTOCK TOUR.—The farmers of the state were this week invited to attend a tour of the livestock yards of Buffalo and to see how the animals are handled after they leave the farms. A trip thru a big packing plant was one feature of the trip.

CHEESE POSSIBLE FROM PASTEURIZED MILK.—The New York State College of Agriculture has perfected a method of making cheese from pasteurized milk. The yield is about three per cent greater, this increase alone paying the cost of pasteurization. In the aroused state of public interest in prevention of infection from bovine tuberculosis this help will be welcome to the public which [illegible] food as carefully protected as is the milk and whey fed to calves and pigs on the farms.

HIDDEN CARCASSES AND HERDS OF BRANDED COWS.—After the fifty odd inspectors had left the county following three weeks of investigation into the cattle frauds in Cortland County state troopers have this week found two more branded herds hidden away on remote farms. Carcasses of two lots of animals hastily slaughtered by those in the cattle "ring" were found by investigators working for the state.—M. G. F[illegible]

Open Formula Feed

DON'T buy feeds on a grab bag basis. Guard the health of your herd and protect your profits by first knowing what's inside of the bag you buy.

Direct to You

Universal, Empire and Amco Dairy Feeds and Amco Poultry Feeds are "Open Formula Rations" approved and recommended by College Feed Conference Board. The original "Open Formula Feeds" you bought last year—made in the same mill—but this year sold DIRECT TO YOU in place of through other channels.

Before you buy or contract for any feed, see your local American Milling Company's Car Door Agent or write direct to the world's largest feed mill for 1925-26 Feed Pool prices, terms and copies of "Open Formulas."

The Neshaminy Gardens

(OUR FARM)

Where an Editor Works and Thinks

DRY weather and fertilizer are no doubt the primary and secondary causes of imperfect stands of potatoes in this section this year. When sufficient rain follows heavy applications of commercial fertilizer there is little danger of damage, but when the rainfall is short the fertilizer is very likely to injure the seed, especially if the two come in contact. We find at Neshaminy Gardens that many hills are missing, and sometimes several feet of a row is found without any plants. On digging down we find the pieces of seed are decayed. The seed was sound when planted. We are coming more and more to the conclusion that it is not safe to place any kind of seed in direct contact with even a small amount of fertilizer, and the sooner implement makers evolve machines and seeders that keep them definitely apart the better it will be for farmers.

✣ ✣ ✣

CLEM says that the water applied by irrigating systems "don't do as much good as dat which God sends down in rain," and he is probably correct, but we do know that it is better than none at all. This has been a good season to test irrigation and we have done so to our satisfaction. The beets, carrots and celery to which we have applied water have grown right along thru the hot, dry weather. Our system is a makeshift, composed of some pipes and several pieces of hose with nozzles attached. These are moved about and held in place by attaching them to movable stakes.

✣ ✣ ✣

OUR opinion of the St. Regis (Ranere) red raspberry does not rise with closer acquaintance. Its quality is good and it is a good bearer, but we don't like the long harvest season. We harvested the first berries the first week in June and if they do this year as last we will be picking berries up to October. The first crop is born on last year's canes. The berries of this crop are rather small but they are good. New canes have grown this season and are now two to three feet high. Soon they will begin to blossom and will bear berries of much larger size, and will continue until fall. But it is our experience that the Cuthburt will produce as many berries in four pickings as the St. Regis does in four months.

✣ ✣ ✣

IT MAY be remembered that some bragging was done in this column about the growth and behavior of the Cooper and Gibson strawberry plants set last season. All that was said was fully justified so far as plant growth is concerned. They are without doubt the most vigorous and promising plants we ever raised. We never had a better set of blossoms and fruit. The berries are large, but we don't like the color nor the quality. Of the two, the Gibson is probably the better but it is not first class, and we are glad we set only one hundre dplants of each.

✣ ✣ ✣

SINCE it was published in this column that our son had quit a good salary job in the city to take up farming a good many letters from young men have been received. The example seems to have caught the fancy of a number of young men who evidently needed a concrete example of the "back-to-the-farm" idea to give them courage. The latest one writes:

"Would you advise a farm boy of twenty-one years to take out $5000 life insurance as a means of saving money with which to buy a farm later? I am making five to six hundred dollars per year, have a good farming education, and live with my parents. No time set for buying a farm."

Yes, life insurance is a good thing for any young man. Take out only what you feel reasonably certain of keeping up and have a definite agreement with yourself that you will meet the premium every year. The reliable companies offer policies of very attractive investment nature and it requires only a few years until they reach a borrowing worth which is of great value to a young man buying property. Or, if the policy is of the endowment kind, maturing in ten, fifteen or twenty years the holder has a stake coming to him at maturity which the average young man is not likely to save otherwise. There is no reason why an intelligent, energetic young man who has vision and nerve may not succeed in his determination to own a farm, and by the same token to make a success of the business. The truth of the old saying, "Where there's a will there's a way," still holds. The reason why so many see no "way" is because they do not have the "will." Entirely too many young men are spending their money as they make it in jazz parties and gasoline instead of investing it with an idea of buying a farm and home later. My advice is: Go to it and may success be yours—R. P. K.

THE CHEERFUL PLOWMAN

Conservative Taste

WHO invented all these broods of many-fibred breakfast foods! They come in boxes, sacks and cakes, in biscuits, powders, puffs, and flakes! They're made of corn, and rye, and wheat, of rice, and bran, and sugar-beet!

They come in boxes, sacks and tubes, in squares, in ovals, and in cubes! They're seasoned fresh and seasoned salt, with sugar, peanut shells, and malt! Some should be cooked and others not, some should be cold and others hot!

Now I would most sincerely hate to be considered out of date, but when I was a younger lad one breakfast food was all I had,—a muscle builder, good, and real, old fashioned oats rolled into meal; a porridge cooked in steaming pot and always taken piping hot; a breakfast food as smooth as silk when fixed with sugar, cream and milk; a breakfast food with ample powers to keep one working many hours!

While I suppose these later things, endorsed by all from kids to kings, are worthy stuff and very nice, good tissue builders worth the price, yet none the less I'm here to say I still eat porridge every day, for nothing takes the place, I feel, of good old oats rolled into meal!—J. Edw. Tufft.

Spray for Cut Worms

THERE have been numerous reports this year of serious damage by cut worms in plantings of strawberries, raspberries and other small fruits and vegetables. For quick results in controlling these pests the Geneva Agricultural Experiment Station recommends an inexpensive poison bait. It is either broadcasted in the field or, in the case of small fruits, sprinkled about the base of each plant. The following formula will provide enough material for five acres: Bran, 20 pounds; paris green, 1 pound; cheap syrup, 2 quarts; three lemons; and 3½ gallons of water.

Should Be Used in Evening

The bran and paris green are mixed dry. The juice of the lemons is squeezed into the water and the peel and pulp chopped to fine bits and added to the water. The syrup is then dissolved in the water and fruit mixture, and the liquid stirred into the bran thoroly in order to dampen it evenly.

If a smaller quantity is wanted, the amounts of the different ingredients may be reduced proportionately. It is recommended that the poison bait be applied in the evening, because the cut worms are night-feeders, and the bait will thus be in a fresher condition than if applied earlier in the day.

New Seed Test

SEVENTY-FIVE plots of certified potato seed was grown by seventy-five farmers in Bradford, Cambria, Potter, Somerset and Sullivan Counties have been planted on the farm of the State Hospital at Harrisburg under the supervision of the Pennsylvania Department of Agriculture. The potatoes from each county have been planted separately and each man's seed is placed in a row with stake bearing his name so that visitors can easily compare the counties as well as the seed of individual growers.

It is the plan of the Department of Agriculture to invite the potato growing public to visit the experimental plots at blossoming time to note their condition. Later, the yield of each plot will be checked as well as the per cent of disease present.

Ton Litter Club

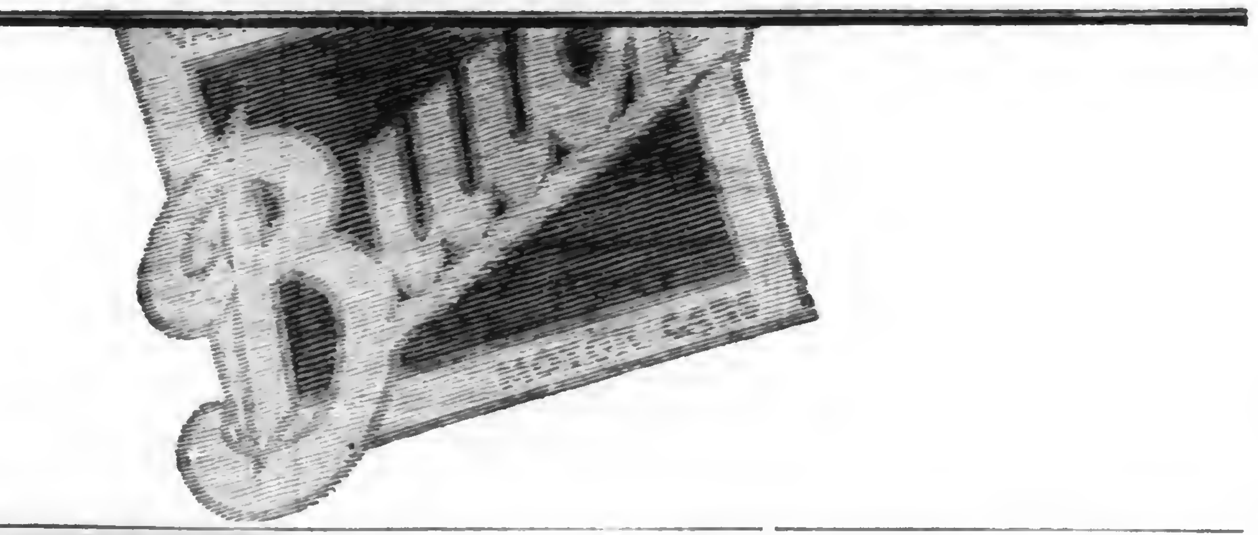
TO DATE 304 litters have been nominated for the Keystone Ton Litter Club in forty-three of the sixty-seven counties in Pennsylvania.

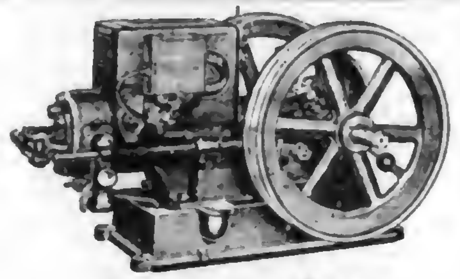
The four chief breeds in Pennsylvania are represented in the nominations by twenty per cent Berkshires, 29.7 per cent Chester Whites, 23.3 per cent Duroc-Jerseys, and 26.9 per cent Poland Chinas.

York County, which led all the counties at the end of the season last year with eleven litters which reached the 2000-pound mark in 180 days, is first in the number of nominations with forty-seven, the largest number yet reported for one county in the entire United States. Lancaster is second with twenty-seven, Adams third with nineteen, and Jefferson fourth with eighteen. Westmoreland County has seventeen litters nominated, Northumberland and Cumberland, 14 each, and Centre has twelve.

Last year the total nominations were 250, of which fifty-eight successfully passed the 2000-pound mark in the prescribed six-month period. With more litters nominated and last year's experience as a guide, swine growers are expected to do even better than last year when Pennsylvania ranked second only to Illinois in the number of ton litters.

It would take the entire capacity of the great Buick factories *more than six months* to produce the Buick cars now in operation on the Pacific Coast — — — Buick value is recognized everywhere.





Announcing 1926 Models

Here is our latest and greatest achievement—the last word in internal combustion engine development. Not just one size, but a complete line—1½ to 25 H. P.

These engines embody many improvements and refinements for the convenience of the user—the result of our many years' experience as engine specialists.

If you enjoy operating an engine that starts easily, runs smoothly and quietly—develops more than its full rated horse power, and will do it continuously and economically over a long period of years, then you'll be interested in learning more about the Fuller & Johnson 1926 Models.

Descriptive literature gladly sent free on request.

The Secret is in the Patent Mesh Belt
BOGGS POTATO GRADER

Can't Bruise Potatoes

A grader that skins or bruises potatoes is a poor investment. Injury to even the greenest, tenderest potatoes is unknown where the Boggs Grader is used, for it carries them over our patented endless belt without any shaking motion.

Less than 3% variation in size from Government grades will be found in Boggs-graded potatoes—a record impossible with square or diamond shaped mesh belts. The Boggs exclusive belt-within-a-belt handles round or long potatoes with equal accuracy.

And for speed, it's a regular race horse! Depending on the size of machine, you can sort and grade from 75 to 700 bushels of potatoes or onions per hour. It is impossible to overload the power models. It isn't necessary to stop the Boggs to empty a filled bag. Simply push the deflector to the other side and potatoes will run into the empty sack while the filled one is being removed.

Compact and portable. Made for a lifetime of service. Operated by hand, motor or engine. Six models, $40.00 and up.

A postal card brings our interesting booklet. Write today.

Here's a Money-Saver

With this low-cost long-lived **Handy Farm Mixer** you can afford to put in those permanent improvements you have wanted.

Do this work yourself at odd times with this mixer and cut concrete costs practically in two. Put in walks, steps, foundations, platforms, floors, etc. Make fence posts, feeding troughs, cement blocks, etc. You can pay for a **Handy Mixer** on a job or two.

It mixes a wheelbarrow load per minute and can be operated either by hand or with a small engine.

Use it also for mixing feeds, and washing root crops. Comes in handy the year around.

It's built of steel and iron—will last forever. See your John Deere dealer.

HERE'S A VALUABLE BOOK FREE
"101 uses for concrete." Covers the many uses of concrete on the farm. FREE, write John Deere, Moline, Illinois, and ask for Booklet AM-836

Manager Pomona Gardens, Newark, Delaware

Objections to Mulch

A neighbor of mine plans to apply a manure mulch around tomato and eggplants and along celery rows. He says this is the best way to use manure for these crops. Is that a fact?—H. A. N., Salem County, N. J.

Manure mulches furnish plant food, at least when there is rain enough to reach the manure, and they also protect the soil from rapid drying. Unless they are made very thick, however, they favor weed growth, and this growth can hardly be removed except by hand without destroying the mulch.

In the case of very dry weather long continued, altho the manure serves to protect the soil from drying, its own plant food is not available. Under these circumstances you cannot get its full value.

Would Work It into Soil

When manure is scarce and high priced I should by all means plow it into the soil, or work it into the surface if it is well decayed, rather than use it as a mulch. You may remember that the plowed-in manure, altho it does not act as a mulch, yet saves soil water in another way, just as a sponge holds water.

There is another point that should make you think twice before using manure generously as mulch, except on a small scale. The labor of applying such a mulch is all hand labor, whereas manure may be broadcasted on uncropped land with a spreader at a fraction of the cost.—W. C. P.

Home Grown Peas

Nearly every year part of our early peas and string beans are left on the vines at the end of the picking season. Last year there was so much rain during pea harvest that we could not get more than half the pods picked. Usually some of the beans grow too tough before they can be sold as snap beans. Can the peas and beans be allowed to ripen and the seed threshed and used next year?—W. H. N., Gloucester County, N. J.

There are two objections to using these peas and beans for seed. The first is that both these crops seem to make better seed in a northern climate. This is especially true of peas. Some varieties of beans are saved every year even by growers in the South, but as a rule the best seed comes from points north, where diseases are less troublesome.

Commercial Seed Better

In many seasons the pod spot or anthracnose of beans causes trouble and this may be carried over on the seed. There is plenty of it on commercial bean seed, but likely to be more on home-grown beans because these are sometimes worked in when the vines are wet with rain or dew.

The second objection is that both peas and beans get weedy as the season advances, and the land where they have been grown is likely to be well infested with weed seeds if the plants are allowed to mature their seed. Then, too, the pea ground at least cannot be worked with a cultivator after the vines are of full size, and if left long unplowed after that the soil may get very hard and unworkable for the rest of the season.

This objection, of course, is not an important one where land is plentiful, but holds for small gardens and even farm gardens of limited size.—W. C. P.

Better Tomatoes—Less Labor

TOMATO plants should be pruned and trained, in the home garden at any rate, and many market gardeners find it profitable to do it on a larger scale. Rot, the great enemy of tomato growing, can ususally be avoided by having the fruit away from the ground and exposed to plenty of light and air. The fruit ripens earlier also and is much smoother and more regular when kept off the ground.

We are very fond of large, solid Ponderosas. Many claim that they grow too rough and irregular to be good; but trained on stakes or trellises I have found them very free from these faults. We rarely find a rotten tomato, and then it is only on one side, where a sudden shower, followed by hot sun, sometimes scalds the fruit.

Must Reduce Amount of Work

I have tried a number of different methods of training, some of which involved too much labor for the results produced. Sometimes I have trained the plants to a single stem the whole season, making them climb a bean pole, to which they were tied at intervals. All side shoots were cut off just beyond the first blossom. This produced the finest fruit of all, but only a moderate quantity.

An easier method of training is to nip off all but a few shoots on the growing plant and set four stakes around it, slanting outward. A cord runs around the top of these to confine them and the shoots are trained across from one to another, forming a considerable bush. This gives a large amount of pretty good fruit, as the sun and air can get into the whole plant, and it is well up from the ground.

A modification of this plan is to place a single stout stake four feet high by the plant and nip off all shoots till the plant has reached the top, tying it firmly at intervals. Then let the plant grow freely, its branches trailing down to the ground again. This makes some excellent early fruit along the main stem and furnishes an abundance of tomatoes, large and small, later in the season.

The Writer's Favorite Plan

The plan I have followed for several years is this: Having a lot of old poultry netting, I made long trellises, using stakes every five feet, the trellises being about thirty feet long. The wire does not need to come nearer than one foot of the ground, so the two and one-half foot width will make a trellis three feet high. The trellis is used for early peas, and they are thru with it in time for the tomatoes.

The plants are set four feet apart in the rows and trained to four or five branches, which are spread out fan-shaped over the wire. After they have grown to the top I prune only where the foliage is getting too thick. One can cultivate along the rows the whole season and keep the plants growing. They get an abundance of light and air, giving a large crop of first class fruit.—J. A. U.

How to Take Care of Baby Chicks in Summertime

IT IS a common complaint for a poultryman on the farm to say, "My first hatch of chicks have been doing fine, the second hatch have been getting along fairly well, but the last hatch have been mauled and trampled by the old hens and the older growing stock until many have died and most of the others are stunted and looking rather rough."

The best remedy is to furnish the late hatched chicks with a range fenced away from the old hens and the early hatched chicks which are now large and strong. The next best method is to furnish the young chicks with a supply of feed and water which cannot be reached by the older chicks.

Especially for the Baby Chicks

If the late hatched chicks are in colony houses bore a few little holes in the side of the trapdoor if it slides up and down. Raise the door just high enough to permit the little chicks to go out and in. A small stick or a spike placed in one of the holes will keep the trapdoor at the proper height. It can be raised another notch as the chicks grow.

Inside the colony houses keep a fountain of fresh water and a hopper of growing mash. Feed the chicks most of their fine scratch grain inside the house where they will not be trampled at feeding time. Keep the front of the house as open as possible during hot weather but have the openings covered with hardware cloth to keep out poultry and sparrows.

If you lack colony houses use some of the small brood coops to house special feeding and watering equipment for the late hatched chicks. A poultry shipping crate can be thoroly cleaned and placed on the range where the young stock feed. Keep a water fountain and a mash hopper in the crate. Throw the fine scratch feed for the chicks into the crate. They will dart between the slats where larger chicks cannot go and receive plenty of feed without being trampled into the dirt by the heavier birds.

Shade Necessary

When young chicks can get all the feed they require they often develop enough vigor to keep out of the way of the old hens on the range and can use the same range. But if they have to fight for feed with stronger birds they are soon weakened. Their bodies become thin and the feathers roughened and the chances of making fall and early winter layers out of such stock diminishes rapidly.

Late hatched chicks are in need of shade during the hot summer days. If no shade is available where they are ranging, try to move the colony houses or brood coops near a patch of raspberries, corn or sunflowers. The edge of a corn field is a fine summer range for chicks. During the heat of the day they range over soil that is apt to be cool and moist compared with the baked ground in an unprotected yard. The scratching of the chicks is good for the corn.

The shade of corn or sunflowers is a protection for hawks. These birds seem to hunt with their eyes and the chicks they do not see they cannot catch. At the approach of a hawk our chicks will flock under the corn and the hawk usually goes sailing along. Hawks do not seem to swoop down and then dart under a screen of foliage to hunt for their prey. They seem to like to make their catches in the open fields. This is very fair and considerate of the hawks and a great help to the producer of poultry.—R. G. K.

Baby Beef Club

ELEVEN members of the Unionville Baby Beef Club of Chester County, Pennsylvania, exhibited animals at the Lancaster Fat Stock Show, June 3 and 4. The champion of the sixteen animals was shown by Dale Warren. This calf weighed 850 pounds, and he was bid in at 20¼ cents a pound in the sale, bringing a total of $171.20. An average of $14.87 per hundred weight was paid for the sixteen baby beeves which averaged 866 pounds in weight. The total price of the lot was $2067.82 or an average of $129.23, the highest on record for club calves in the Keystone State.

Club Was Organized in Fall

The members of this baby beef club are all pupils in the Unionville Joint Consolidated School. Last fall they decided to feed some purebred Hereford calves for exhibition and sale at the Lancaster show. At the beginning of the project on October 1 the calves averaged 481 pounds. They were immediately put on a good grain ration of corn, oats, bran, and oilmeal, which was gradually increased until in thirty days they were on full feed.

Each boy spent considerable time and effort in training his calf for the competition in the show ring. The calves were first taught to lead and then trained to pose and stand for the judges' inspection. The boys spent a great deal of time polishing horns, trimming feet, washing, curling hair, and practising other details of the herdsman's art.

Spotting the Boarder Hen

THESE are the characteristics of good and poor egg producers as summarized by J. C. Taylor, poultry extension specialist of the Pennsylvania State College. Mr. Taylor recommends that the flock be culled regularly once a month if the production falls below fifty per cent.

POOR EGG PRODUCERS:—Pale, dry, shriveled comb, covered with whitish scale; dry, puckered, and yellow vent; yellow pigment in beak and shanks, or yellow returning; molting over neck and body, also wing molt; shallow body; pelvic bones only one finger width apart; and hard, dry skin.

GOOD EGG PRODUCERS:—Red, full, soft combs; large, white, moist vent; pale beaks; not molting; deep body conformation; pelvic bones spread two or three fingers apart; and soft and pliable skin.

Cholerine
FOR FOWLS

Cholerine Brings Profit Eggs

Know why? Because Cholerine given to your hens in mash or water enables them to get every bit of strength, energy and egg-making material out of the feed they eat.

Cholerine does this job in a natural way by keeping the glands and intestines thoroughly clean and by stimulating hens appetites and assisting digestion.

Cholerine keeps poultry up on their toes and vigorous. Disease never has a chance. Each egg is fertile—and every fertile egg hatches a live chick. 90% of the biggest poultry feeders and shippers use Cholerine. Should you be without it? See your merchant for a free sample of Cholerine today.

A Canning Pointer or Two

One Housekeeper Manages a Profitable Business

TO HOUSEKEEPERS who are contemplating the purchase of a canning outfit, I hope that my experience will prove of benefit. I wish to show how a little expense and spare time can turn many of the by-products of the farm into a valuable asset. I ordered 2000 cans. I also ordered a capping steel. This is the best investment I ever made in canning supplies, far superior to the cappers for sealing.

Something else I have found very necessary is a rotary peach and apple parer. It does beautiful work cutting the peel as thin as paper and very evenly. It does the work of half a dozen people.

How I Marketed My Goods

Our stock consisted of strawberries, red raspberries, blackberries, peaches, tomatoes, beans and grapes. I used only perfect fruit and vegetables and attractive labels, and the berries and peaches had the standard amount of sugar. I sold part of my stock to boarding houses in our town.

By Christmas I advertised my canned fruit for sale in our town paper, and our trouble was soon ended, as I received orders for all I had and could have sold more. In addition to the 2000 new cans, I also filled 125 cans I had left over the year before, which made 2125 cans.

There is a nice profit and quite a lot of pleasure to one who is painstaking and loves the work. My outfit looks as good as new and I do all my own work.

How the Canning Is Done

To can peaches, peel them nicely, remove the stone, leaving the pieces as large as will go in the can. Pack the cans full of fruit, fill crevices with syrup, wipe clean and dry. Solder on the caps by using a capping steel, leaving an air hole in the cap for the air to escape.

Place the cans in the top tray of the canner. Have the water in the canner boiling, and lower the tray of fruit into the boiling water, leaving an inch of can above the water. Process seven minutes, take out, make air tight.

Change to the lower tray of the canner, sink entirely below the water in the canner, and watch for bubbles of air from the cans. If there is a bubble the can is not tight. Take it out and make it air-tight. Return to the water and cook fifteen minutes. Remove and set in a cool place.

Pears and apples are done the same as peaches, but berries I cook only ten minutes.

Figures Show Profits

I will give the exact account of my last season's canning: Expenses, cans, capping steel and five pounds solder, $70.25; canner, $15.50; labels and crate, $8.25; sugar, $12.50 Total, $106.50.

Receipts, 60 dozen No. 2 can peaches, @ $1.85 per dozen, $111.00; 40 dozen No. 2 can strawberries, @ $1.50 per dozen, $60.00; 20 dozen No. 2 cans beans, @ $1.25 per dozen, $25.00; 10 dozen No. 3 cans apples, @ $2.00 per dozen, $20.00; 20 dozen No 2 cans tomatoes, @ $1.25 per dozen, $25.00. Total, $241.00.

This is what I sold, but look what we used in our home, a family of ten! So there is a dandy profit, and you know just what you are eating when you do your own canning at home.—Mrs. A. C. U.

A Reader's Problem

DEAR PENNSYLVANIA FARMER:—I have been a subscriber of Pennsylvania Farmer for six years and would be pleased to have a few questions answered. 1. How to can spinach. Can it be canned in glass jars? 2. How to can green peas with or without acid. 3. How to can green string beans. 4. How to can corn. 5. How to can green lima beans. 6. How to can sweet potatoes.

I shall be pleased to get the information. We have used a small amount of some kind of acid they called "sweet acid."—Anxious.

A good many experiments have been tried of adding from one to three tablespoons of vinegar to each quart jar of peas, beans and corn, (all of which are lacking in acid of their own) and slightly shortening the time of processing. If you do not object to the flavor, you may like to try this.

Acid May Be Unnecessary

It is not, however, necessary to use acid of any kind if your products are strictly fresh and clean, your jars and rubbers perfect, and if you follow the rules exactly. In any case it is not advisable to use an acid that you know nothing about.

Some of your questions have been answered in the series of articles by Grace E. Fitts, published on the Home Page for April 4 and succeeding numbers. In addition, the following suggestions may help you.

Beginning with Spinach

1. Spinach (as well as all other vegetables and fruits) may be successfully canned in glass. Pick the spinach over very carefully and wash thoroly clean. Fold it loosely in a large square of cheesecloth and steam it for fifteen minutes. Then dip it for a moment in very cold water and cut it into convenient lengths for packing.

Have your glass jars sterilized and hot. Pack the spinach into the jars fairly close, but do not force it down too hard. As soon as one jar is packed, fill it to within one-quarter inch of the top with boiling water, add one level teaspoon of salt to every quart jar (half that for pints) adjust rubber and cover and fasten top wire. Or, if you use screw tops, screw tight and then loosen by one turn. Put each jar into the hot water bath as soon as ready.

When all the jars are in (the water should come over the top of the jars) and the water is boiling process for two hours. Remove jars at once, fasten, test for leakage, and let cool as rapidly as possible without exposing them to a draft.

Peas, Beans, Corn, Potatoes

2. Peas. Wash and shell. Steam (as in 1.) for five to ten minutes. Cold dip and proceed as in (1), but process for three hours.

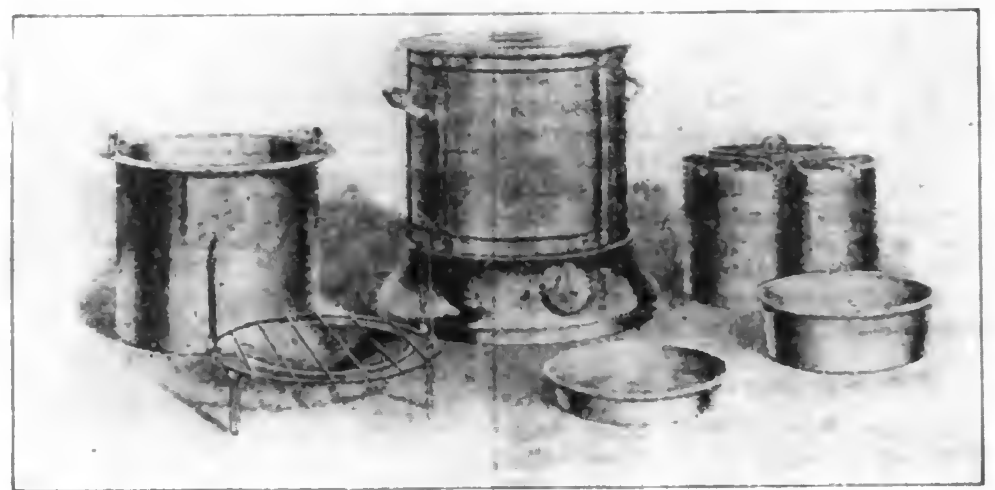
3. String beans. Wash and string, process as for peas, but process only two hours.

4. Lima beans. Wash and shell, and proceed exactly as with peas.

5. Corn. Remove husk and silk. Steam (on the cob) for five minutes. Cold dip. Cut from cob and pack, being sure not to pack jars entirely full, as corn swells. Add water and salt as for other vegetables. Proceed as before. Process three hours.

6. Sweet potatoes. Wash, pare and cut in convenient pieces for packing. Steam for five minutes, cold dip, pack and process for one and one-half hours.—I. S. H.

Possibilities of an Electric Cooker



VERY economical because it operates on three heats; high, medium and low. The "low" is only ninety watts, which is enough to keep food simmering. Ninety watts is only half as much as the ordinary lamp light. With special dishes, the cooker will cook three things at once. Ideal for baking small cakes and pies. With top shell removed it is an ideal electric stove. The initial cost is offset by great utility and satisfaction. Requires no attention while cooking.

BEST EVER CONSERVE

1 quart strawberries (hulled and cleaned)

1 quart rhubarb (using only the delicate pink stems) cut into half-inch lengths

1 small pineapple, or 1 No. 2 can of pineapple, cut into shreds.

Combine the three fruits and weigh. Place over a slow fire, adding three-fourths as much sugar, by weight, as you have fruit. Simmer slowly, shaking kettle to prevent sticking if necessary. Stirring is apt to crush the fruit.

A small shaving of orange or lemon peel is pleasing for variety. Add this after cooking starts.

When thick, pour into glasses and seal as you do jellies. It will keep till spring (if you hide it).—G. S. S.

TO WASH PILLOWS

It Might Be Well to Give This New Way a Trial

I HAVE always renovated my feather pillows by steaming, emptying the feathers into a thin bag or worn pillow case, then laying them on two sticks across a boiler of boiling water and steaming them thoroly.

This spring I had some that had been in use so long that I wanted them washed. As I had never cleaned them that way I dreaded it. I knew they could be washed but I hardly knew how to go about it.

I emptied the pillows into old pillow cases, washed the ticking and dried it. Then I made a good suds, filling my washer two-thirds full. I put the feather-filled sacks into the water, gradually wetting every part. Then very carefully I tore the pillow case on the under side and kept pushing the feathers under the water until all were wet.

Easy When You Know How

Then I closed the top down and washed them ten minutes in the suds. I screwed the wringer down tight and turned them thru into a big tub of clear blue-water. For the last floating feathers I used an old discarded colander (made by punching holes thru an old tin milk pan). It was a great success, as no feathers were lost that way.

Then I pinned a bag to the rinse tub and wrung the feathers thru the wringer into the bag. When all were thru I fastened the bag shut and hung it in an airy place out of the sun on the porch.

Into the end of each pillow I sewed a pillow ventilator. They are small spool-shaped affairs made of rubber, hollow, with small pin holes in each end.

I am well pleased with the result of my experiment, and pass it along. I suppose some of our dear old housekeepers will laugh. Well, let them; I can laugh at myself, too, over some of my experiments, even when they are not the success that this one was. —Mrs. E. A. Kern.

Chrysanthemums

A FRIEND of mine in the Middle West who is famous for his crysanthemum gardens told me several secrets that are responsible for his success.

They are: 1, weekly cultivation; 2, weekly feeding (sheep or chicken manure being best); 3, snipping out the crown of each stem not later than the first week in the three months June, July and August,—never later than August 10.

After that date just let the chrysanthemums alone in every respect until ready for cutting.—G. S. S.

Ever-Useful Kerosene

A piece of cloth one by twelve inches, saturated with kerosene and placed in each dust box of the sweeper will keep the dust from scattering.—Mrs. E. M. C.

On the floor is shown Congoleum Gold-Seal Rug No. 323. The 6 x 9-foot size costs only $9.40.

CONGOLEUM
GOLD SEAL
GUARANTEE
SATISFACTION GUARANTEED OR YOUR MONEY BACK
REMOVE SEAL WITH DAMP CLOTH

Facsimile of Gold Seal that is pasted on every guaranteed Congoleum Gold-Seal Art-Rug.

The sewing room of your dreams—

What a charming sewing room! And so practical! Note, for instance, the Congoleum *Gold-Seal* Rug. Would you ever dream that this rich, colorful floor-covering could be kept dust-free and new-looking simply by an occasional light mopping?

Easily and Quickly Cleaned

Lint, broken threads, scraps of material—all the odds and ends of sewing—can be removed in a jiffy from Congoleum's smooth surface. No tedious, time-taking sweeping as is necessary with dust-collecting woven floor-coverings. Every busy woman will appreciate the freedom from drudgery that Congoleum *Gold-Seal* Rugs afford.

Patterns for Every Room

So varied and appropriate are Congoleum patterns that it's easy to find a design which will harmonize with any room in the home. There are fascinating Oriental motifs, dainty and charming floral effects and extremely neat tile and wood-block patterns.

Congoleum Rugs are laid without any kind of fastening. Tacking or cementing is never necessary. Just unroll them—and in a few hours they hug the floor. They never kick up at the corners or edges to trip unwary feet or interfere with swinging doors.

And though unqualifiedly guaranteed for service, they are amazingly low in price.

Note These Very Low Prices

6 x 9 ft.	$ 9.40	The patterns illustrated are made only in the five large sizes. The smaller rugs are made in designs to harmonize with them.	1½ x 3 ft.	$ .60
7½ x 9 ft.	11.70		3 x 3 ft.	1.30
9 x 9 ft.	14.05		3 x 4½ ft.	1.95
9 x 10½ ft.	16.40		3 x 6 ft.	2.60
9 x 12 ft.	18.75			

Owing to freight rates, prices in the South and west of the Mississippi are higher than those quoted.

"*Things Every Woman Should Know About Congoleum Rugs,*" an interesting booklet by Anne Lewis Pierce, shows all the patterns in their actual full colors. It will gladly be sent to you free upon request to our nearest office.

The Hood Flat Tread principle is one more demonstration!

This tread was developed in the Hood laboratory to minimize the side-wall flexure so dangerous to balloon tire life. It is another demonstration of Hood's intent to build more miles into any tire bearing the Hood White Arrow mark.

The Hood Flat Tread puts more rubber on the road—distributes the load over the greatest number of square inches—and gives the utmost protection against skidding. It provides an easier handling car, with greater traction in every kind of weather and on every type of road.

The Hood Dealer will be glad to demonstrate these facts to you. It will pay you to 'Look for the Hood White Arrow' on the tires you buy.

HOOD

Look for the Hood White Arrow

The Hood White Arrow is a time tested guarantee of design, materials, and workmanship. Look for this identifying mark—for safety, economy and dependability.

Fresh Onions to the Fore

Ways to Prepare Dishes That are Seasonable

THE onion fresh, sweet and tender from the summer garden seems like a different vegetable from the onion well ripened and stored for winter, and the cooking of the two should be radically different.

Winter demands fried onions for steak and roast onions with beef or pork, while summer calls for a delicate, light dressing of cream or butter in order to get all the flavor and sweetness of the vegetables.

CREAMED ONIONS

Peel and wash as many white onions the size of a small egg as are needed and put in the casserole with salt and pepper. Watch until enough juice develops to cook without scorching. Cook until tender in a slow oven.

Fifteen minutes before dinner is to be served make a pint of cream sauce in a sauce pan with a lump of butter added when it is smooth and creamy. Pour over the onions and return to the oven until ready to be served.

BUTTERED ONIONS

Take a granite sauce pan with a lump of butter the size of a walnut for about a dozen large onions. Peel and slice the onions thin. Season and put with the butter in the pan without water.

Put the pan on the back of the range and occasionally stir the onions without making them mushy. Cook at least two hours very slowly. They will then be golden brown and delicious.

ONIONS WITH MEAT DRESSING

Cook the required number of onions till tender and drain as dry as possible. In the frying pan where you have cooked ham put a half pint of cold milk and thicken with flour made smooth in cold milk for thin gravy.

When the sauce is smooth and rich pour over the onions. If there is too much fat from the ham pour part of it off. Fryings from steak can be used in the same way.

ONION SOUP

Parboil for thirty minutes a dozen large onions and drain. Chop rather fine and add to meat broth that has been well seasoned. Cook slowly for several hours, the last hour adding half a cup of rice and one cup of potato peeled and cut in thin slices.

This makes a nice white soup.

ONIONS WITH HAM

Take one cup of cold boiled or fried ham, lean and fat mixed, and run thru the grinder. Cook as many onions as needed in salted water till tender.

Drain well and put in a granite pan with a little flour, butter, seasoning and a tablespoon or two of milk. Over the top sprinkle the ham and put in the oven for thirty minutes.—Hilda Richmond.

Roadside Sandwiches

WE ARE a half mile off the main market road from Cleveland to Pittsburgh. It is said that one does not need to go hungry on this road for there is always a sandwich fifteen feet ahead.

A few weeks ago some friends of ours were out from Cleveland to call. They brought with them their picnic supper. Mrs. G— said: "We brought all of our lunch save sandwiches. We were told by some friends about the sandwiches served at Stacy's lunch room near here, and we drove out last week and sampled them. We want more for they are delicious."

They had passed several lunch stands in the five miles before reaching those chicken sandwiches, but those particular sandwiches had a reputation.

Worth More Than Others

I said to the friend: "How much are those sandwiches?"

"Why really I don't remember what I paid for them, but I know I would pay more for those than any other sandwiches I have had along this road."

Those farm people are selling their old chickens off of the farm in a high class finished product. They are making money, for when people stop for sandwiches they will buy gas and other things on sale there, too.

I stopped there last night and tried one of their sandwiches again.

If one is going to be in the lunch room business it pays to serve a high class product, for the sandwich itself is the best sort of advertising.—May H. Mumaw.

THE BRIDES' NEEDS

A List of Kitchen and Dining Room Ware

FOR the bride who is going into her own home, the question of what she needs in dining room and kitchen ware becomes a puzzling one, especially where the question of cost must be considered.

Thoughtful friends may give her a linen, kitchen or aluminum shower, and many pretty pieces will come to her. Yet the most needed articles may be missing. What shall she buy? We will assume that she has her linen.

A set of dishes can often be secured in a stock pattern for as little as twenty dollars. Sometimes the bride-to-be can get her dishes in return for a small outlay of time during her leisure hours, by getting subscriptions for a magazine or doing similar work. It is often possible to secure silver in the same manner.

In addition to china and cutlery for everyday use, she may want a water glass set, a fruit dish, a cake set, a salad set, a bread plate, jars for syrup, marmalade, pickles, etc., and perhaps a cocoa set. Other articles may be purchased as their need arises.

For the Kitchen

While the dining room ware (if everything must be bought) will take a big slice out of one hundred dollars, the kitchen necessities may be covered by an expenditure of forty dollars. These should include three saucepans, one covered kettle, one four-quart tea kettle, one two-quart double boiler, an iron frying pan, two light weight frying pans, a coffee pot, a tea pot, a set of muffin tins, a measuring cup, a set of measuring spoons, a bread board, a rolling pin, a flour sifter, a set of mixing bowls, an egg beater, one cake tin, two broad pans, two pie pans, one pudding mold, six custard cups, one roaster, two mixing spoons, one spatula, one paring knife, one bread knife, one carving knife and fork, one potato masher, two case knives, two forks, two tablespoons, two teaspoons, one food chopper, can opener, dish pan, dish drainer, pail, mop, dustless mop, dust pan, broom, dust brush, bottle brush, vegetable brush, colander, strainer, containers for dry groceries, lemon squeezer, griddle, bread box, tray, garbage can, knife sharpener, ice pick. Dish towels, dish cloths, dusters and holders have presumably been provided with the linen.

Other articles will suggest themselves, but the above list covers what the bride will need in her new home.—L. M. T.

For Your Summer Needs

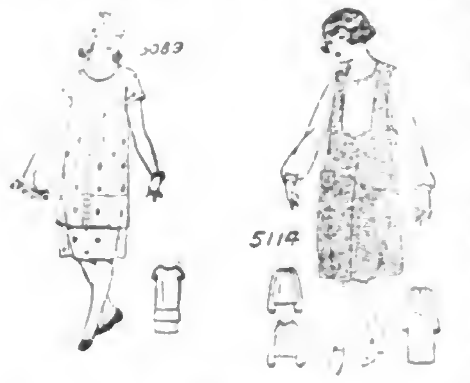
Directions for Ordering.—Give figures and letters of each pattern exactly as printed at beginning of each description. Give bust measures when ordering waist patterns, waist measure for skirt, and age for children's patterns. Address Pennsylvania Farmer, 261 S. Third Street, Philadelphia, Pa.

5143.—An Attractive Negligee.—Comfortable and with new features, this popular garment can be developed in silk, crepe, flannel or blanket cloth. Four sizes: small, 34-36; medium, 38-40; large, 42-44; extra large, 46-48 inches bust measure. A medium size will require 4½ yards of 32-inch material. Pattern, 10 cents.

5150.—House Dress for Stout Women.—One could use crepe, percale, gingham or linen for this style. The closing is reversible from left to right or right to left. Eight sizes: 40, 42, 44, 46, 48, 50, 52 and 54 inches bust measure. To make a 42-inch size as portrayed, will require 5⅛ yards of 27-inch material with 1⅜ yard of contrasting material. The width at the foot is two yards. Pattern, 10 cents.

5089.—Frock for the Growing Girl.—Any of the new prints will be good for this design, also cotton or silk broadcloth, rep or linen. Four sizes: 6, 8, 10 and 12 years. A 10-year size requires 2⅝ yards of figured material and one-quarter yard of plain material 36 inches wide, if made is illustrated. If made of one material 36 inches wide, 2⅞ yards are required. Pattern, 10 cents.

5114.—A New and Popular Style.—Jumper styles are in vogue in every conceivable material. The model here portrayed was developed in the new cotton prints, with rep for the guimpe. Gingham, flannel, tub silk and linen are also attractive. Four sizes: 8, 10, 12 and 14 years. A 10-year size will require two yards of 26-inch material for the dress, and 1⅝ yard for the guimpe. Pattern, 10 cents.



5131.—Play Dress.—Printed crepe or challis would be good for this design. The bloomers may be joined to an underbody. The smock may be finished with sleeves in short or wrist length. Four sizes: 2, 3, 4 and 5 years. A four-year size requires three yards of 27-inch material with three-eighths yard of contrasting material for collar facing and leg bands, if made with long sleeves. With short sleeves one-eighth yard less is required. Pattern, 10 cents.

5100.—A Dainty Dress.—Dotted swiss or dimity as well as other soft materials are ideal for this little garment. It is cut in one piece, with seams at the underarms and may be easily developed. Five sizes: for 6 months, 1, 2, 4 and 5 years. A 2-year size will require 1⅜ yard of 27 or 32-inch material. Pattern, 10 cents.

Send 10c in silver or stamps for our up-to-date spring and summer 1925 Book of Fashions.

"THE ASTORIA"

OLD GLORY

Long May It Wave

Let's Keep The Glow in Old Glory

The patriotic hearts of American men and women beat quicker at the sight of the flag. Let it be a fresh, clean flag that flies from your home on Fourth of July and on all national holidays.

We Will Furnish The Flags

Send us two subscriptions to Pennsylvania Farmer for the balance of this year and all of next at $1.00 each and we will send you a flag by prepaid post. Given with a single subscription and 75 cents extra.

The flag is 3x5 feet, sewed stripes, warranted fast colors, and absolutely rain proof.

Pennsylvania Farmer
261 S. 3d St., Philadelphia, Pa.

Ice Cream Freezer

Two Quart Size

Freeze your own ice cream, fruits and water ices with a Jeannette High Speed Freezer. Ten to fifteen minutes does the trick.

Full directions and many recipes for making ice cream, fruits and water ices accompany each freezer. We will send you one of these wonder freezers parcel post prepaid for 2 yearly subscriptions to Pennsylvania Farmer at $1.00 each or with your own renewal and $1.00 additional.

Pennsylvania Farmer 261 S. 3rd St. Phila. Pa.

Farm Account Book

don't guess at your income. Start keeping a Farm Account. Then you will know just where you stand.

While the supply lasts we will furnish our paid-up subscribers with a cloth-bound Farm Account Book, sufficient in size for an 8 years' record, for the nominal sum of 50 cents. Worth $1.50. Send orders to
PENNSYLVANIA FARMER.
261 So. 3rd St., Phila., Pa.

OUR YOUNG PEOPLE'S FORUM.

From Forum Friends

Dear Cousin Ruth and Forum Friends:—I live in the good old Keystone State and am a real farmer girl. I do almost all the work on the farm with my father. I was graduated this term for high school. I am not sure whether I am going or not.

Isn't it hot? I'll bet Cousin Ruth is about roasting from the heat and we all will have a roasted cousin.

I am fifteen years old today. I have a good name for my birthday. I'm named for roses.—Rosie Volpe, Westmoreland County, Pa.

Dear Cousin Ruth and Forum Friends:—I am a girl of twelve. We had a picnic at Oakford Park the last day of school, May 22. I did not miss a day of school this year. My teacher gave me a book about Abraham Lincoln, the man of the people.

I live in the country on a farm. I have five brothers. My brother has a pony, it's name is Topsy. I often ride it in the evenings. For pets I have two dogs and two cats. Their names are Bill, Trix, Flossy and Tabby.—Belva F. Kauffman, Westmoreland County, Pa.

Dear Cousin Ruth and Forum Friends:—Our school was out May 19 and I was glad but I like to go to school. I am twelve years old and am in the seventh grade.

There was a robin built its nest on our front porch. I watched it and I soon found one egg in it but something has happened to the robin because she does not come back.

Here are some riddles:

1. Why is the grass on which the cow feeds older than yourself?
2. When is a chicken's neck like a bell?
3. What is taken before you get it?

—Ruth Vogle, Sullivan County, Pa.

Dear Cousin Ruth and All:—We have been taking Pennsylvania Farmer for a number of years and I enjoy reading the Young People's Forum page very much. I am twelve years old and live on a farm of fifty-five acres. I have three sisters and three brothers and they all are older than I am.

For pets I have a black cat and a tiger cat. The tiger cat has five little kittens. They are so pretty and playful. I love to watch them. My brother has a tan and white dog named Sport.

My school closed the 11th of May. On the last day we had a short program consisting of songs, recitations and dialogues. After the program we had cake, ice cream, lemonade and candy. I passed in all my subjects in examinations. I shall be in the eighth grade next year.—Harold James Sweitzer, Wayne County, Pa.

Dear Cousin Ruth:—The weather is very warm here, the warmest I have ever known for June. Our school closed May 22 and I was promoted to the seventh grade.

I shall be eleven years old in August. I love my home on the farm and am so thankful I am here this hot weather. I am studying music and sewing this summer.—Sarah Frances Wheaton, Cumberland County, N. J.

Dear Cousin Ruth:—I am twelve years old and I go to Pine Grove School and am in the eighth grade. I think that you have a nice lot of boys and girls.

I have two sisters and one brother. My brother is eighteen months old and he is just getting nice. I think I like little ones when they learn to walk. We live on a little farm near Honey Brook.—Ruth Kessler, Lancaster County, Pa.

Dear Cousin Ruth and All:—I enjoy reading the letters every Thursday or Friday when we get Pennsylvania Farmer.

There is a little wren building a nest below our house. I love all birds. I am ten years old and I am in the fifth grade at school.—Grace Douthit, Jefferson County, Pa.

Just yesterday I saw a tiny wren's nest balanced on a small limb of a great buttonwood tree. While we were looking at the nest Mother Wren flew home and settled down on the eggs.

COUSIN RUTH.

Dear Cousin Ruth and Forum Friends:—Our school stopped May 7th. I had three different teachers. My first teacher got married at Christmas and then we had another for two days. Then we had the third the rest of the term. I will write a few riddles.

MY COUSIN AND MY CHUM
Minne Mounts, Washington County, Pa.

1. What color is the wind?
2. What color is this riddle when you get thru with it?
3. Why is the letter "A" like a honeysuckle?
4. What is it that can't run or jump or hop or have any fun at all and still has three feet?

—Alice E. Hesser, Mifflin County, Pa.

Dear Cousin Ruth:—Hello, everybody. I haven't seen very many letters from Bucks County and I wonder why our Bucks County boys and girls don't write.

I was thirteen years old on the 13th of May but had a lovely time, not unlucky at all, and I am in the eighth grade in the Perkasie school. I live in Perkasie but we (my brother Charles and I) go to our grandfather's farm in the summer time and that is how I got acquainted with Pennsylvania Farmer, and I always liked it very much. I know by your page that you all love birds and that is why I love to write to you, because I just love them too.

My daddy works at the race track in Quakertown and he takes care of six horses, which I like very much. Up at the track are a pair of birds of a very queer species to me for they are real, real little and then they have real long legs. This pair made a nest and there are little birds there now. They look very queer with their long legs and small bodies. They are real tame and walk right up to daddy when he feeds them.—Mildred Kerber, Bucks County, Pa.

Dear Cousin Ruth and Forum Friends:—I am nine years old and live on a large farm. I go to Tunkhannock school and am in the fourth grade. I can hardly wait till the next paper comes. I always dart for this page.

I wish this page success. It is the best in the paper.—Albert L. Mann, Wyoming County, Pa.

Dear Cousin Ruth and Forum Friends:—Since vacation has returned I found time to write to the Forum. I belong to four other clubs and have been working for them but now I am sure I will find time to contribute to the Forum.

I am thirteen years old and I will be a freshman in high school when school begins again. I live on a large farm. My mother milks six cows but I do not help her as our house is so large and I help my older sister do this work.

We have one dog, three cats, one of which is a black Angora; three calves, and a lot of chickens.

Perhaps Cousin Ruth and other members would like to hear about the other clubs I belong to?—Dorothy Ann Sterbutzel, Fayette County, Pa.

Indeed we would like to hear about the clubs you belong to. Why don't you join the next contest?

COUSIN RUTH.

My Bird Friends

Dear Cousin Ruth:—I am ten years old and I have lived in a city in Colorado until the last four years. We came here to visit my grandparents who lived on a large farm in Delaware County, New York.

The birds here are different from the ones in Colorado. I will tell you about some of them around our house.

At present there are only a few birds here as the spring has been so cold.

We have a pair of robins building a nest in a tamarack tree which can be seen from our pantry window. They gather great bunches of long broad grass and sometimes it is not very easy to pull from the ground and they jerk themselves off their feet. They carry great bills of this grass and they wind it around and sometimes seem to stand on their heads getting it placed as they want it. Then they go to a pine tree which is in front of our kitchen window and doors and gather great bunches of dried pine needles and grass. At present they have it about half finished.

Then there is a pair of house wrens making a nest right beside our kitchen window among our wild roses. They scold while making their nest and just as the sun goes down one will stand on our doorstep and sing a pretty song as if it were saying "good-night."

In a corner of the kitchen under the eaves of the house a pair of Starlings have nested all last summer and winter and have begun to make a new nest in the same place. They carry large twigs and grass to build with and sometimes the twig is so large they can't get it in use for building.

Every year for three years a pair of bluebirds have built their nest in a hole in a mountain ash tree beside our house. They are here now but do not seem to be building their nest yet altho they visited the place quite often.

We have orioles, canaries, and goldfinches in the tamaracks and maples also apple trees around our home every year. They have not come yet because it is early for them.

There are several red-wing blackbirds building in a swamp near here now. They call so pretty. It sounds like they are saying "clarkalee" and as my name is Clark Leal mother always calls me like the birds.

In summer we see a different kind of bird nearly everyday. They seem to all gather around our home. We are glad because we enjoy them and hope they will always come.

This is a very long letter but I wanted to tell you about all our bird friends. I hope I may write again some time.—Clark Leal, Delaware County, N. Y.

Will Hazel F. Huffman, from Mifflin County, Pa., please let me have her post office address, so that I can send back the photograph she asked me to return?

COUSIN RUTH.

Answers to riddles sent in by Edna A. Fortna, Lebanon County, Pa., published June 13, 1925.

1. When it's a bad one.
2. None, they both burn shorter.
3. Tie him to a post.
4. On the outside.

OUR LITTLE FOLKS' PUZZLE CORNER

Dear Little Folks:—The white blocks above the numbers in the picture are to be filled with letters. In order to find what the two words are which these figures will help you to spell, I'm giving you a key to the numbers. For instance: 7, 2, 5, 10 spells a word meaning "slender"; 13, 3, 11, 12, has twelve months; 6, 9, 12, 10, grows on an ear; 2, 9, 1, is the way the sun makes you feel; 12, 11, 8, 10, something wet; 6, 2, 11, 5, 12, something to sit on; 4, 11, 13, has twenty-four hours. When you have filled in the letters you will be surprised to find that you have spelled something that contains many more words than those you have been working out.

When you have found the answer send it to me on a POSTAL CARD so that it reaches me by July 4. BE SURE TO SAY HOW OLD YOU ARE. The ten children, sending in the correct answer, whose cards are the best in grammar, spelling, punctuation, penmanship and general appearance, will each receive a prize. Address all replies to the PUZZLE EDITOR, PENNSYLVANIA FARMER, 261 SOUTH THIRD STREET, PHILADELPHIA.

Puzzle Prize Winners

The answer to the puzzle in the June 6 issue of Pennsylvania Farmer is: GEORGE, ALBERT, THOMAS, HOWARD, WALTER.

The prize winners are: Dorothy Barefoot, age 10, Alum Bank, Pa.; Robert Crowl, age 7, Oxford, Pa.; Francis Donahue, age 8, Bedford, Pa.; Helena Feighner, age 9, Carrolltown, Pa.; Eugene A. Hoover, age 10, Newville, Pa.; Audrey Lee, age 10, Sudlersville, Pa.; Ruth E. Shaw, age 11, West Chester, Pa.; Benjamin Somers, age 7, Denton, Md.; Nora Thoman, age 10, East Berlin, Pa.; Clide Yocum, age 11, Lebanon, Pa.

The Education of Billy Stream

By Frederick William Wallace

Copyright, HODDER & STOUGHTON, Ltd., Canada.

BILLY STREAM arrived in Anchorville after two years at college, and Captain William Stream, senior, fish merchant, vessel owner, and proprietor of the plant which turned out Stream's famous "Morning-Glory Finnan Haddies and Fillets—the Nation's Breakfast," was reviewing his son's university career in language which caused the young man to squirm.

"Yer ma was foolish to imagine that the likes o' you 'ud ever be anything," raved the old man. "She had an idea that ye'd git yer degree an' be an engineer or somethin', an' what hev ye done for th' last two years? Ye've wasted yer time an' my money boozin' an card-playin' an' bummin' around town with yer good-for-nawthin' pals. About all ye learnt was to write home for money. Ye got scrappin' with waiters in resturongs an' I had to pay yer fines; ye were tourin' around the country playin' football an' hockey when ye sh'd have bin studyin' yer books, an' now ye've come home with nawthin' but a bad reputation an' dressed up with yer fancy clothes like a blasted picter post-card!"

Billy attempted to speak but his father checked him.

"Gimme none o' yer guff!" he stormed. "I'm talkin' and you'll listen. I've lost fifteen hundred dollars over your eddication, an' I'll have it out o' yer hide. I was a fool to ha' sent ye to college. I sh'd ha' sent ye to sea. Ye'd ha' learnt more useful knowledge out on th' Banks haulin' trawls.

"I've had enough o' you at college. Ye'll git them fancy duds off an' git down to th 'fish-house. Ye'll work there from seven in th' mornin' to six at night at whatever th' foreman likes to put you at, an' you'll git three dollars a week an' your board at home here. Ef ye git sassy an' sojer yer work, I'll kick ye out an' ye'll never darken my doors again."

"Won't you give me something better than that, dad?" pleaded Billy. "Put me in the office or let me take the little vessel and pick up the fish down the shore ports—"

"Put ye in the office?" sneered the elder Stream. "A white-collar job a-slingin' ink! That 'ud suit ye nicely, wouldn't it, but it won't suit me. Ye'd soon be struttin' around town as the young boss, and as for lettin' ye have the little vessel—why, I wouldn't let ye take charge of a dory. You'll go to work in the fish-house or git out o' this."

The old man gave his son a contemptuous glance and stamped out of the room.

Young Bill Stream, a husky, broad-shouldered handsome fellow of twenty-two, sat silent for a while and felt that he deserved all he got. He had become a star football player, a crackerjack coverpoint at hockey, but his college accomplishments ended there. In his studies he was a laggard, but in his social life he was a shining light. He could dance and he could drink, smoke and play cards.

He was a noted scrapper, not a bully, but a hard-hitting young demon when aroused, and among the college crowd he was known as an "Indian," a reputation which was well enough in college fights and differences with authorities, but detrimental to his prospects with the faculty.

"Well," murmured Billy after a mental retrospect, "there's no use kicking, for 'that's all shoved behind me—long ago an' far away,' as Kipling says. I'll simply have to knuckle down to the old man or get out."

Next morning at seven he reported to the foreman at the Stream Fish Company's plant, and the latter gave the young fellow a contemptuous look and set him to work loading fish gurry into a scow. Billy pitched in, and being a powerful young buck did the work well, but evidently not well enough for Jack Hemsley, the foreman, who nagged at him all the time. Jack had his orders from the elder Stream, and having no use for Billy rather exceeded his orders.

In the afternoon two young ladies came down the wharf to fish. One of the girls was a particular pal of Billy's, and she stopped to talk to him while he shoveled the gurry off the dock to the scow below.

"Daddy mad, Billy?" she said smiling.

"Some mad, Ethel," he answered, knocking off for the moment to speak with her. "I've got a fine job here now."

"Oh, but you'll do something better than that, I hope. You must buck up—"

The eagle-eyed foreman spied him resting from his task, and strode over, bawling:

"Now, then, git to work, you! What d'ye think ye are? None o' yer sojerin'!"

Billy turned very red and faced the big foreman with his eyes blazing. Hemsley was a rough fellow and did not choose his language before ladies, but Stream resented the hectoring tone.

"Be careful how you speak, Hemsley. There are ladies present!"

"I don't care a cuss ef thar were fifty ladies present!" roared Hemsley. "Don't you imagine because there is a skirt on the dock that you kin hev a spell-oh to yarn with them. Git on with yer work, you blasted college dandy!"

This was too much for Billy. Forgetting everything, he hove the shovel down and went for the foreman, striking him on the jaw.

Short Stories for Summer Reading

IT IS proposed to publish during the summer months some short stories in Pennsylvania Farmer. These short stories will occupy the space in from two to four issues each and will be of varying quality both as to subject and treatment. This deviation from our practice of publishing serials is in deference to numerous requests that have been made during the past years. We should be glad to hear from our readers as to how they like short stories in comparison with serials.—Editors.

HEMSLEY cursed and put up his hands. He was a big man and as tough as iron, but while he had the strength, yet he lacked the science, and a beautiful fight soon brought all the fish-workers from the sheds to form an appreciative audience.

The scrap was hot and heavy while it lasted. Some of Hemsley's sledge-hammer blows got home and Billy lost a tooth and had one of his eyes bunged up. It served to cool him off however, and he fought more scientifically. Getting a straight right to Hemsley's jaw, he hit in with his left, and while the man was dazed for a second, gave him the right again smash on the nose.

The foreman saw stars and Billy gave him a crack which knocked him down into the gurry-heap. The foreman was tough and jumped to his feet and grabbed Billy around the waist, and both men wrestled and struggled around the slimy dock.

For a moment they clinched in a deadlock, and Stream remembered the wrestling tricks of the college gym. He made a rapid movement and hove his opponent from him into the gurry-heap again. As he went down, Hemsley swung his rubber-booted foot up and caught Billy a staggering smack on the side of the head.

The young man saw red and hurled himself on the prostrate foreman. Grabbing him by the collar of his shirt, he yanked him to the cap-log of the wharf and hove him down into the scow-load of gurry, in the midst of which he landed with a gurgling plunk.

Panting and sweating, he stood up and became aware of the fact that the spectators had vanished. A savage kick from a rubber-booted foot caused him to jump around and look into the angry face of his father. The foot rose again and Billy grappled with an enraged parent.

"Don't you try that again, dad!" he panted. "I only gave Hemsley what he deserved."

"Keep your hands off me, you beach-comber," yelled the old man. "Git away out o' this. Git out now! You're a disgrace to the town! Clear out, or by Godfrey I'll have you thrown out by the men!"

Billy released his hold.

"Father," he pleaded, "listen to me a minute—"

"Not a word!" roared his parent. "Clear out!"

THE young fellow saw the look on his father's face, and having a certain amount of pride, did not feel like doing any cringing before the interested eyes peeping out from the windows of the plant. He turned shortly on his heel, picked up his coat from a spile and strode away. As he walked down the wharf he could hear his father talking to the discomfited Hemsley.

"Why didn't ye hit him with a billet o' wood—the infernal young sculpin."

Feeling sick at heart, Billy Stream left the waterfront and walked up the fields.

"Give a dog a bad name and hang him," he muttered, and threw himself down on the grass to think.

"I won't go home," he decided after a mental survey of the case. "Dad is mad and he'll nurse his temper for months. He thinks I'm no good—and, by Jove, I don't blame him or mother. It's up to me to retrieve myself."

He lay for a while looking up at the sky and thinking. The thoughts were not pleasant. He realized that for the past two years he had idled and wasted his time without a thought for the future.

Billy wasn't a bad fellow. He was like a young colt—a little wild, but strong and full of life. The college crowd idolized him for his prowess in athletics, and he liked their admiration. It took away his individuality, however, and he became too much of a good fellow.

"I've got to buck up," he resolved. "I'll cut out drinking and fooling and get down to solid work. I'm no good for an office, but I might be some good aboard a vessel. Dad won't have me, but maybe Uncle Ben will. I'll go over to Port Anthony and see him. He'll put me up for a few days anyhow."

Rising to his feet he cleaned some of the signs of conflict from his person and swung out on the road to Port Anthony and Uncle Ben Anthony.

"So Will licked you out?" repeated Ben Anthony, with a smile creasing his bronzed visage.

Uncle Ben ran a small fish-plant in the village of Port Anthony, but unlike his brother-in-law, who was energetic and ambitious, Ben was good-humored and easygoing.

William Stream began as a fisherman and built up an immense plant by dint of sheer hard work. The toil of his early days had ingrained itself into his nature, and he was a hard man, tho kind enough at heart. Between him and Ben Anthony there was no love lost, as they were rivals in business. Both men packed and smoked fish for market, and when any of the inland dealers came down to Anchorville, William Stream would show them over his fine plant and draw odious comparisons between it and the establishment of Ben Anthony's at Port Anthony.

"Ye've seen our modern sanitary plant," Stream would say; "now ef you want to look over a wrack of a place go to Port Anthony an' see whar' them Excelsior Brand fish are put up. A dirtier, lousier hole ye never saw, sir. It's fair fallin' to pieces an' sh'd be condemned. I wouldn't eat a fish put up by Ben Anthony for fear I'd be poisoned."

As Port Anthony was a little out of the way, the visitors seldom went there, and it was just as well that they did not, or Stream's words would have been confirmed. Dealers, however, are human and understand the libels of rivals, which understanding allowed Ben Anthony to keep a certain amount of trade from the Stream Fish Company—a trade he would not have kept were the dealers to take the trouble to visit Port Anthony.

"So the old man cut up rough an' hoofed ye?" reiterated Ben Anthony again. "An' ye trimmed Jack Hemsley an' hove him inter the' gurry-scow? Ha! ha! I kin imagine it. Ho! ho! Well, well, boy, I'd give ye a place for that alone. Now, what d'ye want to do—go in the office an' keep th' books?"

"No, uncle," replied Billy. "I think I'll go to sea. I have a fancy that I might make good as a fisherman and take a vessel out as skipper after a while. I'd been in the dory before I went to college. I put in a whole summer with Arthur Thompson in the Leonora shacking, and I can rig gear, bait up and haul a trawl fairly good."

Uncle Ben laughed.

"Fishin's hard work, boy. Sometime's not bad, but the winter haddockin' is a tough proposition. However, ef ye'd like to try it, go ahead. My vessel, the Jennie Anthony, will be in any day now an' ye kin go in her. Make yer home here with me. I'll do anythin' for ye jest to put one over Will. Tell me about that scrap ye had with Bully Hemsley!"

A week later, William Stream, senior, heard the news that his son had gone to sea in the Jennie Anthony as a fisherman, and he laughed grimly:

"Ha! ha! Gone as a fisherman—th' lazy, good-for-nawthin' sculpin. A college-eddicated fisherman! Huh!"

He felt exceedingly bitter, the more because Ben Anthony had taken his son to his home, and he said to his wife:

"Don't you go a writin' to that young whelp, May. Let him work out his own traverse with Ben. We'll see what kind o' stuff's in him tho I cal'late he's too much of an Anthony to amount to much."

Noting the dangerous look in his wife's eyes he added:

"Th' womenfolk o' that family are the best o' the breed."

Mrs. Stream said nothing, but felt all a mother's sympathy for her son just then beginning his apprenticeship in the toughest and hardest college in the world—that of the deep-sea fishing fleet.

IT WAS a hard school and Billy Stream cursed the endless monotony of it. Here he was, overhauling hooks on apparently endless trawls, baiting the same hooks with herring, pulling a pair of oars in a heavy dory, hauling the gear, pitching out and gutting cod, haddock and hake, and doing the same work all over again from daylight to dark, day after day.

Waking and sleeping, he lived in a world which swung and pitched with the restless heave of the ocean. He herded in an odoriferous forecastle with a crowd of rough-spoken, tho kindly, men, and with them, toiled and fought the ceaseless menace of the sea. Tho not at all enamored of a fisherman's life, yet he made up his mind to stick to it, and knowing how his father would be keeping track of his work, he toiled the harder just to spite the "old man."

After his third trip to the Banks, Johnny Wilson, his dory-mate came aboard one night after visiting Anchorville.

"Saw your old man, Billy," he said.

"Did he speak to you?" queried Stream.

Our Weekly Cross Word Puzzle

TO SOLVE this puzzle, fill in the white squares with letters forming the words listed below. For example: 17 (across) is ADVOCATED, and 15 (down) is SALLY. You may begin anywhere in the puzzle. Follow the definitions carefully and, by noting letters common to two words, you will soon have a clew to help you. The solution of this puzzle will appear in an early issue.

"Sure thing. Came up to me an' says, 'You're Will's dory-mate, ain't you?' I says I was, an' he asks me ef I wasn't tired o' havin' a blasted college guy to look after as well as my own work?"

"What did you say?"

"I ups an' tells him that Billy Stream needed no man to look arter him, an' that you was jest as smart a fisherman as any what shipped out o' the bay."

Billy slapped his dory-mate on the back.

"You're a good sort, old man," he murmured feelingly, "and I won't forget it."

Hating the monotonous toil of the dory, Billy read up on navigation and perfected himself in the art of handling a vessel, with the fixed idea of going out as skipper as soon as possible. To that end, he studied the Bank charts, noted the best fishing bottoms, watched the set of the tides on the various grounds and picked up a vast store of knowledge from his shipmates, men who had fished all over the Western Ocean. The little learning he had assimilated in science during his two years at college, helped him wonderfully—especially in navigation and weather lore.

The Jennie Anthony was a poor vessel for winter fishing and Ben Anthony usually hauled her up for the winter months. She was a bad seaboat and rather cranky, and the skippers who had ventured out in her in wintertime usually made but [illegible] voyage. Fish prices were high during the fall that Stream fished in [illegible] and Ben Anthony induced her skipper to keep her fishing as long as possible.

This he did until they took a November snifter in the bay and swept the decks clean of dories, cable and gurry-kid. It was Billy's first experience of a breeze and it failed to frighten him, tho it scared the skipper and some of the gang.

While the gale was at its height, Stream, oil-skinned and sea-booted, sat astride of the furled-up mainsail and watched the schooner's behavior. The water came aboard very heavily and the vessel lay-to like a log with no lift in her. The skipper watched her apprehensively and spoke to Billy.

"Reg'lar barge, ain't she?" he growled. "Heaves-to like an' old bucket. Look at her diving!"

"I'd like to try her on the other tack," shouted Billy above the roar of the wind and sea. "Let me make an experiment, skipper!"

The other laughed.

"Go ahead, son," he said. "Ef you kin make her lie easier, you're a wonder."

Billy got the gang up an, taking the wheel wore the ship around.

"Now slack off that jumbo an' the foresheet!" he cried. "So! That'll do!"

HE TOOK the wheel and watched the compass, putting the helm down slowly. Scanning the run of the sea, he kept a careful eye on the motions of the vessel and finally lashed the wheel.

"We'll try her at that, skipper," he said, and went below.

Half an hour later, the watch came below.

"She's lyin' nicely since Billy fixed her. She ain't makin' near as bad weather of it as she did afore an' it's blowin' jest as hard."

Billy, in his bunk, felt a thrill of pleasure at the words. The men would remember the incident, he knew, and it made him feel strangely confident.

"She's a bad barge in a breeze, anyway," growled the skipper, "an' I'm a-goin' to knock off soon's we git in. She's no vessel for winter fishin' an' never was."

Stream, however, thought otherwise.

The bulk of the business carried on by Ben Anthony was in dried salt fish. He owned the ninety-five-ton Bank schooner Jennie Anthony and two shore-fishing motor-boats, each run by two men. The haddock caught by these craft were smoked and packed for market under the Excelsior Brand, and Ben Anthony shipped them up to various jobbers in the inland cities who disposed of them. The other fish—cod, hake, pollock and cusk—were salted and dried and sold to traveling buyers who exported them to the West Indies and South America.

The Stream Fish Company was a large organization owning three Banking schooners, the Leonora, Eugenora, and Astronora, fine modern semi-knockabout vessels, each carrying ten dories. In addition they owned a pick-up gasoline shooner which plied between the fishing villages on the bay, buying fresh fish. The company also bought the fares of the motor-boat fishermen running out of Anchorville. The fish handled by them were shipped to market fresh and in a cured state; the mainstay of the business being the marketing of the famous "Morning-Glory Brand of Finnan-Haddies and Fillets, Kippered Herring and Bloaters." To market their products, the company had sales agencies thruout the country.

The bete noire of the sales agents was the Excelsior Brand. Every time Ben Anthony procured a stock of fresh haddock, he smoked the fish and his jobbers undersold the products of the Stream Fish Company and played havoc with the market. William Stream, senior, tried many times to put his brother-in-law Ben out of business, but could not manage it, and as Ben had no regular and steady trade in his products, Stream considered that he was an interloper and disorganizer.

WHEN the Jennie Anthony tied up to her dock in Port Anthony, the skipper resigned and Ben made preparations to haul her up above high water for the winter months. Billy then broached his ideas to his uncle.

"Look here, Uncle Ben," he said, "if you could keep the Jennie fishing all winter wouldn't it pay you well?"

"Sure it would," replied Ben, "but who'll go afishin' in her? She's cranky an' wet an' no skipper'll take her out winter fishin'."

"You let me have her," said Billy. "I'll take her out."

Ben Anthony looked hard at the young fellow and then he laughed.

"Waal, by heck, you hev a nerve, son! Three months a' fishin' an' ye want to go skipper on that cranky barge in wintertime. Ha! Ha!"

"Uncle Ben," said the other seriously, "I mean what I say. I put in three months aboard of her just to get the hang of things so's I could take charge of a vessel. Did you think I meant to stick at the grubby drag of work in the dory? Not on your life! Not on your life! I've been keeping my eyes open and learnin, and I'm confident of my ability to skipper the Jennie Anthony. With ordinary luck, I'll catch fish, too."

"Even supposin' ye can sail an' navigate her," demurred his uncle, "that won't alter the fact that she ain't a winter fishin' vessel. She's too cranky for heavy weather, an' ye'll never git a gang to sail in her."

"That schooner can be made seaworthy, uncle," replied Billy decisively. "I've been watching her. She's badly ballasted, and if you'll agree, I'll draw off her lines and reballast her properly. With a little money spent on her I can fix her up."

The other waved his hand.

"We've tried that," he said. "We've overhauled her ballast lots of times—"

"Yes," interrupted Billy, "you have. That's just the trouble with you fishermen. You get monkeying about with a vessel and, instead of ballasting her the way the designer meant her to be ballasted, you go ahead on your own ideas.

"That's what you did in the Jennie. You've got a big pen of sand placed in her fore-hold—a regular dead-weight in the fore-end of her—that takes all the life out of the vessel. No wonder she's cranky. I'll make a safe bet that her pig-iron and stone ballast was dumped in under her floors and levelled off anyhow. I've done a little yacht sailing up West and I know how much ballast affects a vessel's trim and sailing qualities."

At last, with many misgivings, Ben Anthony gave his consent, and for several days Billy spent his time measuring the schooner and drawing off her lines, a piece of work he credited to the little knowledge he picked up during his two years at college. Procuring the plans of a similar vessel—the original designs of the Jennie were lost—he figured out displacements with certain loads, and with his plan of the Jennie's lines and a small wooden half-model, he calculated the centers of buoyancy, gravity and lateral resistance.

When the designs were finished to his satisfaction, he got men to work unloading the schooner's ballast, and personally supervised its replacing. Uncle Ben, as an interested looker-on, felt impressed with the careful manner in which his nephew restowed the ballast in a cigar-shaped form along the keelson fore and aft.

(Continued on page 21)

Did you ever hear this one?—

Doctor—Have you taken every precaution to prevent the spread of contagion in your family?"

Rastus—Absolutely, doctah. We've done bought a sanitary cup.—The Baptist.

"Good heaven, man, what is the matter with your face? Were you in an automobile accident?"

"No, I was being shaved by a lady barber when a mouse ran across the floor."

White — They're nice looking horses of yours—appear to be well matched.

Green—They are. One's willing to pull and the other's quite willing to let him.—London Answers.

Minister—Why do you not get a wife, Donald?

Donald—I might get a bad one.

Minister—Trust to Providence and you'll be all right.

Donald—I'm no' so sure, minister, for ye ken Providence has to dispose of the bad as well as the guid.—London Humorist.

Mrs. Nuvorich — And all that money goes for just current expenses, Mrs. Kratt?

Mrs. Aristah Kratt—Why, yes—it's not excessive.

Mrs. Nuvorich—Seems to be a large sum for just that one kind of preserves.

"I've got you at last," he cried; "move if you dare move. It's taken me many years, but at last I've got you where I want you! Now I dare you to move!"

"Yep," you're right," replied his friend, "it's the first game of checkers you ever did win from me."—Treat 'Em Square.

"Madam," said the dignified gentleman, "your dog bit me on the ankle."

"He did?" cried the lady. "Oh, I must send for a doctor!"

"Oh, I assure you it isn't as bad as—"

"You're the third person he's bitten today," broke in the lady, "I just know he isn't feeling well."—Bursts and Duds.

A milkman was charged with selling milk that had been watered.

"What have you to say in your defense?" asked the magistrate.

"Well, your honor," answered the man, "the only explanation I can offer is that the cow was left outside in the meadow all night, and as it rained hard she must have got wet thru."

Dressed Poultry—Chickens, $1@1.65 ea; squabs, 25@45c ea; ducks, $1.40@2.25 ea.

Vegetables—Asparagus, 12@15c bch; beans, green, 15c ¼ pk; do, yellow, 25c ¼ pk; beets, 8c bch; carrots, 8c bch; cabbage, 15@20c hd; cauliflower, 5@15c hd; cucumbers, 5c ea; Brussels sprouts, 10c qt; eggplants, 15@20c ea; kidney beans, 10@15c pt; lettuce, 15@35c hd; onions, 10c qt; scallions, 5@8c bch; parsley, 2c bch; peas, 25c ½ pk; peppers, 5c ea; potatoes, old, 18c ½ pk; new, 20@25c ¼ pk; radishes, 5c bch; rhubarb, 5@8c bch; soup beans, 13c pt; spinach, 10c ¼ pk; sour kraut, 15c qt; tomatoes, 20c qt.

Fruits—Apples, 30c ¼ pk; apricots, 15c qt; cantaloupes, 20@25c ea; cherries, 15@20c qt; currants, 15c qt; peaches, 15c qt; plums, 15c qt; strawberries, 15@25c qt.

The Trend of the Markets

THE figures in the following table represent the approximate unweighted average prices of the commodities and grades specified. The prices are based upon quotations from the market page of Pennsylvania Farmer.

	This week	Last week	Month ago	Year ago
Butter, 92 score creamery extras (N. Y.)	$ .42	[illegible]	[illegible]	.42
Eggs, fresh gathered extra firsts (N. Y.)	.35	[illegible]	[illegible]	.30
Chickens, broilers by express (New York)	.38	[illegible]	.40	.33
Steers, good to choice (Lancaster)	10.37½	9.87½	9.12½	9.25
Hay, Number 2 timothy baled (Phila.)	18.00	18.00	18.50	27.50
Wheat, Number 2 red winter (Phila.)	1.72	1.80½	1.80½	1.30
Corn, Number 2 yellow (Philadelphia)	1.29½	1.31½	1.30½	1.01½
Oats, Number 2 white (Philadelphia)	.64	.65½	.59	.61¾

Grains (prices paid to farmers)—Wheat $1.55; corn, $1.20; hay, baled, timothy, $13@14; straw, $10@11.

Feeds (selling prices)—Bran, $40@41; shorts, $43.50@44.50; hominy, $50@51; middlings, $48@49; linseed, $58@59; gluten, $49.50@50.50; ground oats, $45@46; cottonseed, 41 per cent protein, $52@53; dairy feeds, 16 per cent, $39@40; 18 per cent, $43.50@44.50; 20 per cent, $45.50@46.50; 24 per cent, $50@51; 25 per cent, [illegible]. Horse feed, 85 per cent, $50.50@51.

LIVESTOCK

Review of local market for week ending June 20, 1925. Nearby fed beef steers dominated the market during the past week and with an increased demand from eastern buyers, prices on all the better grades took a strong upturn. Compared with week ago beef steers grading above medium advanced 25@40c with the common and in-between kinds up 15@25c, closing top, $10.90; prime load, 1260 lbs, long yearlings, several loads heavies $10.75; bulk, $8.75@9.50. Bulls and heifers closed steady. Cows weak to 25c lower. Calves strong to 50c higher, top vealers, $12.50; bulk, $11.75@12.25. Hogs held steady under light receipts, closing top [illegible].

Receipts for Saturday's market: Cattle, [illegible] cars, 5 St Louis, 2 Penna, 1 Kansas City, containing 251 head, 705 head trucked in from nearby. Total, cattle, [illegible] head. Receipts for week ending June 20: Cattle, 61 cars, 25 St Louis, 20 Penna, [illegible], Kansas City, 2 St Paul, 1 Indiana, 1 Tennessee, 1 West Virginia, 1 [illegible], 1 Ohio, 1 Kentucky, containing [illegible] head, 1752 head trucked in. Total, [illegible], [illegible] head, 21 calves, 93 hogs, [illegible] sheep.

Steers:—	
Good to choice	[illegible]
Fair to good	[illegible]
Medium to fair	[illegible]
Common to medium	[illegible]
Cows:—	
Good to choice	[illegible]
Medium to good	[illegible]
Common to medium	[illegible]
Canners and cutters	[illegible]
Calves:—	
Good to choice	[illegible]
Medium	11.00@11.75
Common	[illegible]
Hogs:—	
Heavyweights, 200@250 lbs	[illegible]
[illegible]	[illegible]
Lightweights, [illegible] lbs	[illegible]
Rough stock	[illegible]

BALTIMORE PRODUCE

Eggs—Market dull on the Baltimore Butter and Egg Exchange; nearby fresh gathered firsts offered 31c, bid 30½c, no sales.

Butter—Creamery, fancy, 44@45c; do choice, 42@43c; do good, 40@41c; do prints, 47@48c; do blocks, 44@45c; do ladles, 32@33c; Md and Penna rolls, 30@32c; Ohio, rolls, 30@31c; W Va. rolls, 30@31c; store packed, 30@31c; Md, Va and Penna dairy prints, 30@32c; process butter, 35½c.

Live Poultry—Chickens, old hens, 4½ lbs and over, 28@29c; do, medium, 3½@4 lbs, smooth, 26@27c; do, smaller to rough and poor, 20@24c; Leghorns, 23@25c; old roosters, 16c; springers, mixed, colored, 2 lbs and over, 48@50c; do, 1½@1¾ lbs, 40@45c; do, smaller, 35@38c; do, Leghorns, 2 lbs and over, 40c; do 1½@1¾ lbs, 35@38c; do, smaller, 30@32c. Ducks, young, white Pekins, 3½ lbs and over, 30c; do, puddles, 29c; do, Muscovy and mongrels, 28c; do, old, as to quality, 14@20c. Pigeons, young, as to size, pair, 20@30c; do, old, pair, 25@30c.

NEW YORK MARKETS

June 22, 1925.

PRODUCE

Butter firm; receipts, 6276 tubs; creamery, higher than extras, 42½@43c; extra firsts, 92 score, 42c; firsts, 88@91 score, 40½@41¾c.

Eggs irregular; receipts, 15,687 cases; fresh gathered extra firsts, 34@36c; do, storage packed, not quoted; fresh gathered, firsts, 32@33c; do, storage packed, not quoted; fresh gathered seconds, 30@31c; do, storage packed, not quoted; nearby hennery whites, closely selected, extras, 43@45c; nearby and nearby western hennery whites, firsts to average extras, 34@42c; nearby hennery browns, extras, 40@42c; Pacific Coast whites, extras, 43@45c; do, extra firsts, 40@41c.

Cheese easy; receipts, 15,161 lbs; state, whole milk flats, fresh, fancy to fancy specials, 22@25; do, average run, 21½c; do, held, fancy to fancy specials, 26½@27½c; do, average run, 25½@26½c.

Live Poultry—Steady; broilers, by freight, 32@40c; by express, 28@48c; fowls, by freight, 28@30c; by express, 20@30c; roosters, by freight, 14c.

Dressed Poultry steady; chickens, fresh 30@44c; frozen, 25@42c; fowls, 21@32c; old roosters, 14@20c; turkeys, frozen, 30@46c.

LIVESTOCK

Cattle—Receipts, 1570 head, steady; steers, $6.50@11.40; state bulls, $3@5.50; cows, $2@5.50.

Calves—Receipts, 2170 head; steady; veals, common to prime, $8@13; culls and little calves, $5@7; buttermilk calves, $4@5.50; fed calves, $6@7.

Sheep and Lambs—Receipts, 5310 head, steady; sheep, $3@7; culls, $2@3; lambs, medium to choice, southern, $15@17, throwout, $11@13; culls, $11@12.

Hogs—Receipts, [illegible] head; steady, light to medium weights, $12.75@13.25; pigs, $12.50@12.75; heavy hogs, [illegible]; roughs, [illegible].

HAY AND GRAIN

Feeds—Quotations were as follows: [illegible] bran, [illegible]; middlings, [illegible], in 100-lb sacks; red dog, [illegible], nominal, in 100-lb sacks; western spring bran, prompt shipment, [illegible]; standard middling, [illegible]; flour middlings, [illegible]@41.60; red dog spot, [illegible], all in 100-lb sacks, all-rail [illegible] second-hand shipments; [illegible] gluten feed; white hominy feed, $45.1[illegible], all in 100-lb sacks; cottonseed meal, 36 per cent protein, [illegible]; linseed oil meal, [illegible].

Hay and Straw—[illegible], large bales, timothy and light mixed, No 1, $27; No 2, [illegible]; No 3, [illegible]; sample, [illegible].

Grain—WHEAT, No 2 red, c i f domestic, [illegible]; No 1 dark [illegible], c i f domestic, [illegible]; No 1 North Manitoba, in bond, [illegible]; No 2 mixed durum, [illegible]. CORN, No 2 yellow, [illegible] $1.28½; No 2 [illegible]. OATS, No 2 white, 61c; No 3 white, 58c; ordinary [illegible]; fancy [illegible] white, [illegible]. RYE, c i f, [illegible]. BARLEY, malting, [illegible].

CHICAGO LIVESTOCK MARKET

Cattle—Compared with week ago: Fed steers [illegible] grading good and better [illegible] lower grades steady to [illegible]; extreme [illegible]; yearling heifers, [illegible]. Week's bulk prices: Beef steers, [illegible]; cows, [illegible]@6.90; heifers, [illegible]; canners and cutters, [illegible]; vealers, [illegible]; stockers and feeders, [illegible].

Hogs—Fairly active on fresh receipts; bulk desirable 200@270-lb averages, $13.2[illegible]; bulk better 150@190-lb averages, [illegible]; bulk packing sows, $11.75@12; few choice loads butcher sows up to $12.50.

Sheep—Compared with week ago: Fat lambs and yearlings, steady to 25c higher; fat sheep mostly 50c higher. Bulk prices: Fat lambs, $15.50@16.15; cull natives, $10.50@11; yearling wethers, $12.50@13.50; fat ewes, $5.50@6.50; feeding lambs scarce; bulk, $13@13.25; top, $13.50.

WOOL MARKET

Boston, June 19, 1925.

Domestic, Ohio and Penna fleeces, delaine, unwashed, 54@56c; ½-blood, combing, 53@54c; ⅜-blood, combing, 52@53c. Michigan and New York fleeces, delaine, unwashed, 52@53c; ½-blood, combing, 5[illegible]@51c.

GRASS SEED—WHOLESALE PRICES

Toledo, Ohio, June 20, 1925.

Clover seed, cash, $17; October, $15.85; December, $15.20. Alsike, August, $14.25. Timothy, cash, $3.70; September, $4.10.

FEED PRICES

The prices below are for prompt shipments based on payment on arrival of cars as quoted by the Philadelphia jobbing trade to retail feed dealers on Monday, June 22. Quotations cover solid carlots for delivery at Philadelphia or Scranton rate points.

Pure spring bran	$34.50@35.50
Spring bran	34.75
Soft winter wheat bran	38.00@38.50
Hard winter wheat bran	35.50
Standard middlings	38.00@38.50
Soft winter wheat middlings	40.50@41.00
Flour middlings	42.50@43.50
Red dog flour	49.50@50.50
White hominy	45.50@46.50
Yellow hominy	45.50
36 per cent cottonseed meal	46.50
41 per cent cottonseed meal	48.00@49.25
43 per cent cottonseed meal	50.00@50.75
31 per cent linseed meal	51.75

For Baltimore, Cumberland and Williamsport rate points, subtract 20c per ton (for cottonseed meal 40c per ton); for New York, Newark rate points, add 40c per ton (for cottonseed meal 60c per ton), for Woodbury, Bridgeton rate points add $1.00 per ton; for Freehold, Toms River, Cape May rate points, add $1.40 per ton.

Demand slow; slightly increased mill production, market easy.

Phila. Produce Markets

NEW JERSEY tomatoes are beginning to appear on the Philadelphia market. Friday's offerings were of better quality and sold at higher prices. The early Jersey season usually reaches its height around the Fourth of July. Many growers report that the crop has been damaged by the drought and hail. Tennessee has also started to roll tomatoes into this market but the bulk of supplies is coming from Mississippi, Georgia, and South Carolina. The market on this southern stock held steady with little change in prices.

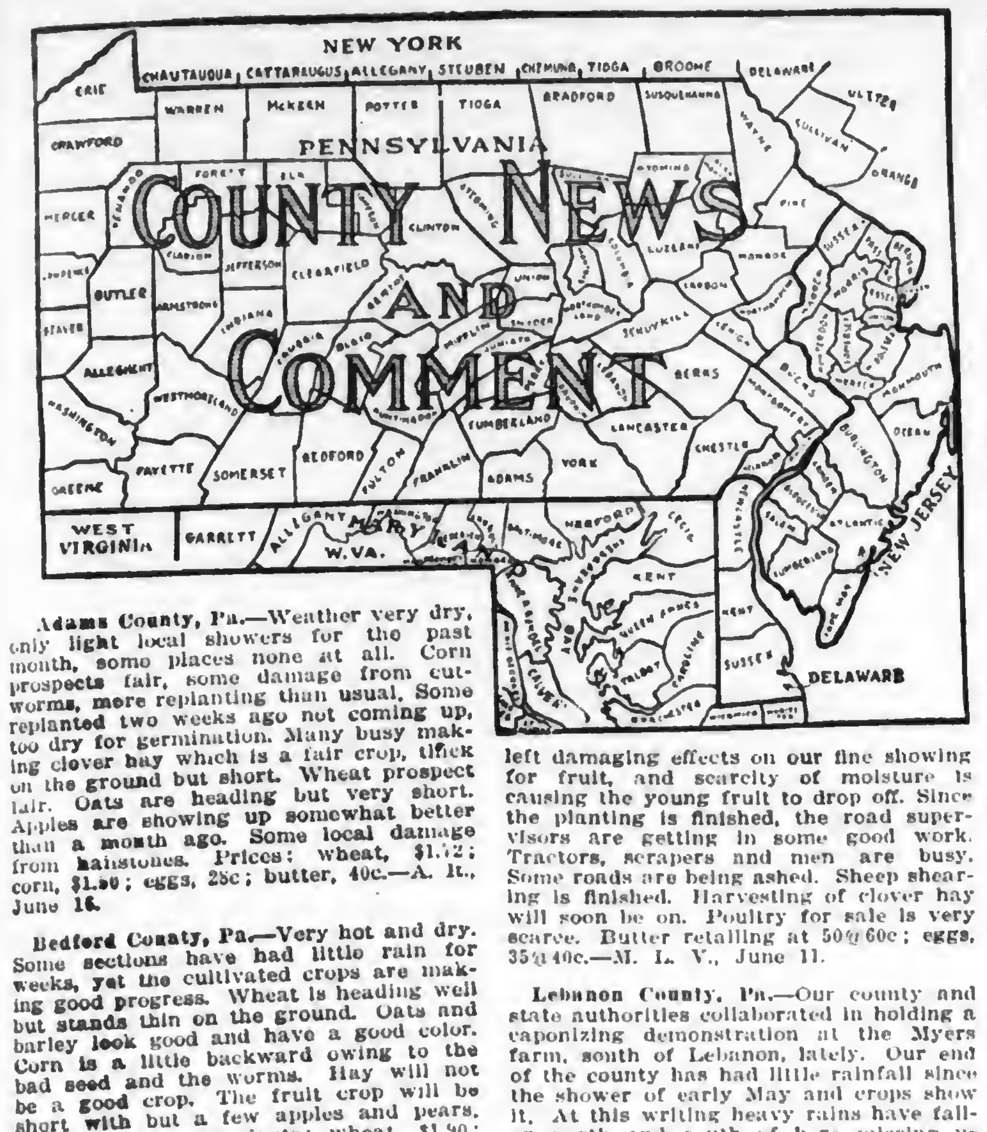
Nearby asparagus, beans and peas sold at unchanged prices. Cherries were in moderate supply and the market held steady. Peaches and cantaloupes were more plentiful and prices lower. Moderate supplies of onions met a slow demand. Jersey onions are only fairly active and prices are lower. Potato receipts were heavier and the market weakened slightly. Old stock from Maine continues dull and slow.

Philadelphia Egg Market

Philadelphia egg receipts on Thursday were the lightest of the week with only 5640 cases reported. Pennsylvania furnished 163, Virginia 113 and Maryland 101. The market on Friday held firm with extra firsts quoted at 35c and firsts in new cases at 32½ per dozen. The live poultry market was firm and prices unchanged.

Feed Prices Slump

Feed prices have slumped in sympathy with grains. Markets are dull and offerings of wheat feeds are slightly heavier. Hominy feed offerings are more liberal but the demand is limited. The gluten feed situation is quiet with prices largely nominal and resellers quoting $1 under mill prices to dispose of holdings. Linseed meal is a shade easier but there is no pressure of offerings in evidence. Stocks and production of most feeds is fair.—W. R. W.



Adams County, Pa.—Weather very dry, only light local showers for the past month, some places none at all. Corn prospects fair, some damage from cutworms, more replanting than usual. Some replanted two weeks ago not coming up, too dry for germination. Many busy making clover hay which is a fair crop, thick on the ground but short. Wheat prospect fair. Oats are heading but very short. Apples are showing up somewhat better than a month ago. Some local damage from hailstones. Prices: wheat, $1.72; corn, $1.30; eggs, 28c; butter, 40c.—A. R., June 16.

Bedford County, Pa.—Very hot and dry. Some sections have had little rain for weeks, yet the cultivated crops are making good progress. Wheat is heading well but stands thin on the ground. Oats and barley look good and have a good color. Corn is a little backward owing to the bad seed and the worms. Hay will not be a good crop. The fruit crop will be short with but a few apples and pears. Prices on farm products: wheat, $1.90; oats, 70c; corn, ear, $1 bu.; calves, 9c; butter, 45c; eggs, 25c; milk, 3.7 to 4 per cent, $1.50.—J. O. A., June 15.

Carbon County, Pa.—Excessive hot weather prevailed during the last two weeks with actually no rain, altho there was enough moisture in the earth for planted crops such as oats, corn, potatoes and garden produce to make excellent growth. Rye has headed out and is in bloom. Wheat is delayed and pale in color. Some sections report grass fields in good condition. Farmers are busy spraying orchards and potatoes. All indications point to a heavy crop of potato bugs. Cherries and pears are scarce. Some sections report plenty of apples while others have none. About a half crop of strawberries was grown this season but home-grown berries found a ready market at 30c per box. Hogs and pigs scarce; farmers growing more chickens. Chickens, 25c; butter, 45c; eggs, 35c; hay, $20 ton.—L. E. B., June 12.

Centre County, Pa.—We have had very changeable weather. From snow May 25, which was two inches deep, out at the Mountain, up to 107 deegrees one June 5 and with it all we have had very dry weather. There have been some local rains but it has been too dry for garden crops. The hay crop looks very promising. The three sections of state road that are being built on our county this summer are taking all the spare men and have brought in a lot of men from other places. The dry weather is favorable for their work which is progressing nicely. Market prices about the same. Wheat, $1.50; rye, $1.15; corn, $1.20; barley, $1; buckwheat, $1.10; butter, 35c; eggs, 25c; veal calves, 9c live weight.—A., June 15.

Elk County, Pa.—With the last of the potatoes and buckwheat going into the ground this week and next we are finishing the spring sowing in this county. Until a few years ago very few potatoes were planted here until about June 15 to 20 for the late main crop but, since the advent of spraying and increased interest in potato growing, the crop is put out about a month earlier and kept growing until frost, thus giving much greater returns. Corn coming fine. More garden truck being grown here than usual. Some very fine early cabbage in nearby fields. Prices not changed much from last month. Beef cattle rather scarce and hard for local butchers to procure. Pigs sold high but a few more litters being grown out. Elk County will be in the ton litter winnings this fall. Poultry industry growing rapidly here.—R. D. M., June 15.

Fayette County, Pa.—Very little rain in the county for the last three or four weeks and the crops are beginning to show it. We had very warm nights and good growing weather if only more rain had fallen. [illegible] short for time of year. Hay crop fair. Timothy and clover rather short, while alfalfa is about as good as [illegible]. Oats crop very short. Potatoes in the county very good. A few sweet cherries in the county and there will be a good many sour ones if weather is favorable. Wheat crop looking very good for the start it got in the spring and there will be a fair crop.—E. H. V., June 15.

Lawrence County, Pa.—Cooling breezes bring relief from the extreme heat suffered for several days. Corn and potatoes, however, welcome the warm days and nights. The later planted crops are growing nicely. Rain is badly needed. Garden plants have to be watered. The late frosts left damaging effects on our fine showing for fruit, and scarcity of moisture is causing the young fruit to drop off. Since the planting is finished, the road supervisors are getting in some good work. Tractors, scrapers and men are busy. Some roads are being ashed. Sheep shearing is finished. Harvesting of clover hay will soon be on. Poultry for sale is very scarce. Butter retailing at 50@60c; eggs, 35@40c.—M. L. V., June 11.

Lebanon County, Pa.—Our county and state authorities collaborated in holding a caponizing demonstration at the Myers farm, south of Lebanon, lately. Our end of the county has had little rainfall since the shower of early May and crops show it. At this writing heavy rains have fallen north and south of here missing us once more, tho we got a light shower. This drought has killed the strawberries, what remained unfrozen; the heading oats is withered but the wheat and grass have benefited thereby. Wet weather would have caused these two mighty crops to lodge badly and we expect wonderful harvests. On account of the heat mulberries and cherries are ripe, and of the latter there are more loaded trees than for years. I wish to say thank you to all for the kind words written and spoken about my handsome (?) picture and article which won a prize in "The Purse Strings" contest. I must add that Howard turns a fine furrow as seen by his picture. His dad's (our editor) waistline is not near what I expected from his say in "Our Farm" column some time ago. I dreamt about them. Fall had come. They showed me about "Our Farm" and I saw evidence of excellent success. May the dream come true.—R. I. W., June 15.

Mifflin County, Pa.—Weather warm and dry in this part of the county, while in other parts they had fine showers. Farmers are busy working corn and making alfalfa hay. A few have cut red clover, which is a fine crop all over the county. Most of the wheat has grown tall and is heading nicely, indicating a good crop of straw and wheat. Oats are also looking well, and owing to the large acreage sown, farmers should be able to fill their barns with hay, wheat and oats. Strawberries are past and were a short crop due to the cool spring weather and late frosts. Dealers busy filling the winter supply of coal which is somewhat cheaper than last year. Market prices: wheat, $1.75; corn, $1.20; oats, 60c; butter, 50c; eggs, 28c; lard, 18c; chickens, 25@30c.—J. H. B., June 15.

Susquehanna County, Pa.—Silas Jagger, official observer of the county, reports that the weather for the first week of June broke its record of an average of ninety degrees. The coolest was last year with an average of sixty-seven degrees. Grange organizations active and thriving. Sixteen new members were added to the Susquehanna County Farmers' Alliance, June 9th. Plans are being made to cooperate with other county organizations for a big picnic to be held some time this summer. Several good roads meetings have been held of late. Results give promise of an improved road to connect the concrete one at Louden Hill with county line below Springville, thus making an improved road from Montrose to Tunkhannock in the near future. The citizens along the line met the county commissioners June 8 and secured their approval for a road to be built on a fifty-fifty basis. Susquehanna County and Broome County, N. Y., held a joint sub-district meeting, representing thirty-five branches of the Dairymen's League, in Binghamton, June 1. J. D. Miller, vice president and general counsel of the League presided. Delegates were appointed to attend the annual meeting at New York June 18.—E. B., June 13.

Union County, Pa.—After three weeks without rain, we had a good shower yesterday, which will help all growing crops. Oats very short in the stalk, but they are shooting heads. Corn doing very well, and it is being cultivated for the last time. Late sown wheat improved very much the past few weeks and promises to be a good crop. Alfalfa hay has been made and some red clover cut for hay, but timothy is very short, and has not blossomed. Veal calves and hens in very good demand at 11c and 28c per pound, respectively. Fat bulls and bologna cows can be sold to better advantage than for some years past. The county potato growers have applied for a charter to do business in buying seed and marketing the crop. Fruit crop generally will be a small one, except quinces, which blossomed after the cold weather. The air mail service has three beacon lights in the county to guide the pilots in their night travel from New York to Chicago.—J. N. G., June 16.

Lancaster's Tobacco

A CONSIDERABLE acreage of the 1925 tobacco crop will have to be replanted as a result of the protracted dry spell which came to an end this week. It is the opinion of growing authorities, however, that the damage to the crop will not be lasting and that harvest time will see the yield and quality harmed but little by the unfavorable weather that has prevailed up to this time.

Planting is about completed, except for the fields that will have to be replanted. The seedlings were set out earlier this year than last, and the benefit to the crop thru early planting will probably be noted in a riper plant.

The market is practically at a standstill on all new tobacco, with some few sales of old goods reported last week. With the cigar business showing increased activity, the market on all grades of Pennsylvania cigar leaf should strengthen.

Contract About Ready

The contract for the proposed Pennsylvania Tobacco Growers' Cooperative Association will be finally completed at a meeting of the committee on contracts. The contract will be mailed to all growers following its approval by the general organization committee, and will be ready for them to sign by the time the charter is obtained about July 7.

Leaders state that they expect many voluntary signatures, thus obviating the necessity for a canvass among all growers. Novel among the methods thru which the cooperative idea is being brought to the growers of this section, is a series of moving picture shows held thruout Lancaster and adjoining counties which portray graphically the activities of cooperative marketing associations in various parts of the country.—Garden Spot Farmer.

Potato Association

(Continued from page 3)

After the contracts were awarded to the company securing the bid, the retail price to the farmers would be quoted on a delivery basis, keeping the same price for every station in the county. The secretary and business agent of the association would forward all orders for supplies to the company or companies. In the case of fertilizers, he would accept nothing but carlot orders. He would do no soliciting over the county aside from mailing out the price list to members. His orders would then come from directors of the association, individual members of the association who would make up no less than a minimum car of fertilizer in their communities, and purchasing agents for the Granges and farmers' clubs.

To the actual delivered cost of the fertilizer was to be added a small amount per ton for the business agent of the association, a slightly larger amount per ton for the association itself, and a fixed price per ton for the directors, or the individual farmers who ordered a car, or the purchasing agent of the Grange or farmers' club, for assembling the orders, unloading, and collecting the money. The price paid for these services was to be the same for the three groups.

When the order came from a director of the association, or an individual member who ordered a car, the association retained its full commission, referred to above. If a Granger purchasing agent, or the purchasing agent of any farmer club ordered fertilizer the association's commission was to be split 50-50 with the other farm organization.

The understanding arrived at in 1924 has fulfilled the hopes of all the farmers of the county who are interested in real cooperation. The association this spring purchased 1225 tons of fertilizer, several tons of the various spray materials and did a total business of $38,317.01. The total cost of doing this business including the cost of assembling the orders, unloading, and collecting the money amounted to less than four per cent. By making its commission slightly higher than the actual costs, the association built up its reserves by several hundred dollars and at the same time refunded small amounts to the other organizations. With these reserves included, the total cost was under five per cent.

Reasons for Success

There are several reasons for the success and the efficiency of this organization. First of all the officers of the association and the officials of the Granges and other farm organizations were willing to cooperate to the extent of forgetting their own organization's identity, if need be. The president of the association, John Schrope, of Hegins, and the head of the Pomona Grange, John Kunkel, of Barnesville, are two of the county's most public spirited farmers. They both feel that their organizations will gain more by cooperation than by competing against each other for business.

It has always been said that the secret of success in any cooperative organization lies in its business agent or manager. This is no trite statement, for the secretary and business agent of the Schuylkill County Cooperative Potato Growers' Association, H. D. Hartman, of New Ringgold, has proved the truth of it. Mr. Hartman was farm-reared, and is at present a telegraph operator. He has found ample time to do the business of the association and his Grange. He is secretary and purchasing agent for his local Grange outside of his regular hours of work. He has conducted the work in a very business-like manner and has dealt with the farmers in a way that only those familiar with the farmer's problems can.

Methods of Selling

A third reason for the success of the association is found in its methods of selling. Everything is on a cash basis. Spray materials are sold only when cash accompanies the order. The company supplying the spray material ships the product direct to the individual farmer so that no handling is necessary. The fertilizer is sold for cash, that is, shipped with sight draft attached to bill of lading.

Finally, the association has kept its over-head and its costs down by selling by mail and thru local members or organizations. When the business agent travels about the county, extends credit, and keeps supplies in stock, the costs soon approach those of the regular trade, and cooperative buying tends to become merely a method, and not a money-saver. In counties with a large population farmers may desire the additional services and may well be able to pay for them. But in a county such as Schuylkill, where there are less than 200 actual farmers, the present plan seems to be the only practical one.

The story of the work of this association would not be complete unless mention were made of the effect it has had on the quality of fertilizers farmers buy. Seven years ago countless numbers of farmers were buying low grades of fertilizers such as 1-8-1 or 1-8-5.

Today things are different. Of the 1225 tons sold this spring only 111 tons had less than fifteen per cent of total available plant food.

Listen to the Men Who Know

The owners of blue ribbon cows feed Corn Gluten Feed when they make a record-breaking test—because it produces the largest yield of milk and butter fat.

Successful beef cattle feeders prefer Corn Gluten Feed as the protein ingredient in their rations. They use it for both pasture and dry lot feeding, and as a substitute for corn—always with big results.

Successful hog feeders have fed thousands of tons of Corn Gluten Feed with shelled corn, tankage shorts, oil meal. It always pays.

They know that Corn Gluten Feed will give them the largest gains at the lowest cost and they are never disappointed. It will pay you to follow their example.

Whether you are mixing your own ration or buying it in a bag, be sure it contains Corn Gluten Feed.

The mixed feed manufacturer who uses Corn Gluten Feed as an ingredient is your friend. It will pay you to buy his feed.

We have published a new booklet—"Feeding on Pasture." Write us for a free copy.

Free Book about Silo filling with Light TRACTOR and
Ensilage Cutting with Tractor
DICK'S

Blizzard Ensilage Cutter

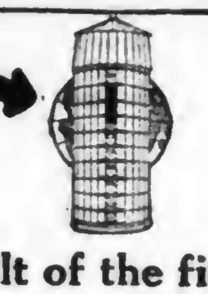
BEFORE investing in an Ensilage Cutter, make sure it will give the results you want with the power you have. There are seven Blizzard Models—each will do most work per H. P. for its size. The two Blizzard models, R-211 and R-133, mentioned above, give wonderful results using Fordson or other light tractor for power. They give big capacity and are real self-feeding models.

Get the Most for Your Money

Paul Pritchard, of Geneseo, Ill., says: "I like the Blizzard Cutter better than any cutter I know of. This is the second one I have used, and if I were to buy another it would be a Blizzard. My silo is 12x48—130 tons. Use four bundle teams on short haul—one team on binder—three men in silo—two men with cutter. Filling time 13 hours.

Write for Booklet Describes all Blizzard models — from small L-18 used with 3½ H. P. to giant S-91 with 35-ton an hour capacity; also "Famous" Feed Cutters for hand and power operation.

THE JOS. DICK MFG. CO., Dept. 25, Canton, O.
Stock of Cutters and Repair Parts at convenient distributing points



Built of the finest materials

GLOBE Silos are made of spruce and fir. Because of this, they last over a generation. The extension roof, an exclusive Globe feature, reduces cost per ton capacity. Heavy matching of walls, double splines, sealed joints and adjustable doors insure absolute air-tightness. Increases value of farm. For durability, convenience and economy, you can buy no better silo. Write today for our catalog and price-list; silos, tanks, ensilage cutters, stanchions, etc.

Pennsylvania State College

Feeds for Holsteins

I am raising three Holstein calves, from two and a half to three months old. They have good appetites but are thin in flesh. I am feeding them the same ration I give my cows. Please suggest a mixture which will keep them in good order. I have to buy all my feed.—G. L. S., Bradford County, Pa.

If skimmilk were available for the calves, they would thrive in a way it is difficult to make them otherwise. Clover or alfalfa hay are also highly desirable for young growing calves. If no skimmilk is available a substitute for it would perhaps be beneficial.

Several proprietary calf mixtures are for sale on the market. The following home-made mixture has given satisfactory results in many cases. It is composed of equal parts by weight of hominy feed, red dog flour, linseed meal, and blood flour. It is mixed with warm water at 100 degrees F. in the proportion of one pound of calf meal to each gallon of water. This can gradually be substituted for skimmilk, so that by the time the calf is five weeks of age it is entirely on the gruel mixture supplemented with hay and grain.

Amount of Gruel to Be Fed

Not over one gallon of the gruel should be fed daily until the calf is one month of age. After this it may be increased gradually until it gets one and one-half gallons daily. Continue such feeding until the calf is five months of age.

A grain mixture that has been successfully used at the Pennsylvania State College to supplement skimmilk and mixed hay as follows: 100 lbs. corn meal; 100 lbs. ground oats; 100 lbs. wheat bran; 50 lbs. linseed oil meal, and 8 lbs. blood flour.—A. A. B.

Association Leaders

FORTY TWO cow testing associations were in operation in thirty-three counties in the Keystone State on January 1, 1925. In these associations milk, butterfat, and feed records were kept of 14,051 cows. This is a marked increase over the number of cows on test during 1924, for altho 10,717 cows were in associations during all or part of that year, the average number of cows for the full period was 8223.

Comparing the average production of these cows with the average amount produced by the dairy cows of Pennsylvania, as given in the 1920 census, it is found that association cows yield on an average eighty-five per cent more milk than the average of the dairy cows in the state.

Among the twenty-nine associations which completed a years' work in 1924, the Volant Association, Lawrence County, stands highest, with an average butterfat production of 355 pounds per cow. The Cumberland County Association ranked first in milk production with an average of 9779 pounds for each cow.

Some exceptionally high records were made during the year which would be a credit to any dairy herd. Among these are two of special interest, one for 876 pounds of butterfat and 23,717 pounds of milk made by a purebred Holstein owned by the State Hospital in Warren County, and another, for 707 pounds of butterfat and 22,323 pounds of milk made by a purebred Holstein in the herd of H. C. Robertson, York County.

Two hundred sixty-one association members reached or exceeded the goal of a 300-pound herd average. Mercer County leads in this respect with thirty-seven herds which passed the 300-pound mark. Lawrence County was a close second with thirty-five and Bradford third, with thirty. The distinction of having the highest individual herd average falls to W. J. Fairchilds, Columbia County, whose herd of purebred Holsteins averaged 472 pounds of butterfat for the year. The purebred Jersey herd owned by F. B. Thompson, York County, ranked second with an average production of 454 pounds of butterfat.—A. L. B.

It Paid to Test for T. B.

DURING a farmers' meeting in my locality last autumn, a dairyman declared he would pay twenty per cent more for a cow that had been pronounced free of tuberculosis.

I had, at the time, three grade Jerseys which I offered for $135. Surmising that the t. b. hint might prove of value, I arranged with a veterinarian to have the test applied.

After waiting the required time, I again pronounced my cows for sale, and besides telling the amount of milk each cow gave, I also stated that they were free from tuberculosis.

I sold the three animals for $160, or $25 more than my farmer price. These buyers also requested that I let them know whenever I had other milk cows for sale.

The testing had made the sale when demand for ordinary cattle was at the lowest point in 1924. It creates a better impression on the customer when butter and milk are offered for sale, and each container and can bears a card stating that the cows from which the product was made have been examined by a qualified veterinarian. The cost of the testing is very slight, considering the results obtained.—F. R. C.

The Cow Sets the Price for Hay

"DO YOUR cows pay you a good price for your hay?" That, in effect, is the question which E. B. Fitts, dairy extension specialist of the Pennsylvania State College, would have every dairyman ask himself. Every crop grown on the farm is sold, either to the dealer, or to the livestock which transforms it for sale in another form. One cow in a herd may return $5.00 a ton for hay, while another may pay her owner $20.00 a ton for roughage out of the same mow.

Milk prices are fixed by market conditions, and the individual producer can do little to change them. But the prices the dairyman receives for the crops he sells to his herd are determined largely by the kind of cows he keeps. "High producing cows pay good prices for crops consumed," says Mr. Fitts. "No man can afford to sell hay for $5.00 per ton."

Dog Book FREE

Veterinary

Conducted by W. C. Fair, V. S.

Advice thru this department is free to our subscribers. Each communication should state history and symptoms of the case in full; also the name and address of writer. Initials only will be published. We cannot make reply by mail. This is one of the most valuable columns of the paper and we invite readers to make use of it. Clippings from this column, when properly preserved and classified, make one of the most valuable medical symposiums a farmer-stockman can obtain.

CHRONIC HEAVES.—I have a fourteen-year-old horse that has had heaves for some time. When driven his bowels move too often, he is inclined to purge and is growing thin. He is fed corn on cob and good hay, which is sprinkled with lime water. I also gave him salt and soda.—W. H. H., Swedesboro, N. J. Chronic broken wind, or heaves in horses is usually incurable; however, by giving one-half-ounce doses of Fowler's solution in feed or in drinking water two or three times a day, also feeding grain and grass, he will soon be more comfortable and show some improvement. Avoid water before hard or fast work; give water in moderation between meals; give mashes of bran and oats with carron-oil, damp straw for roughage if you stable him. Unless you diet him, the treatment I have prescribed will not do him much good.

AZOTURIA—SWOLLEN SHEATH—Have a horse fourteen years old which for the past four or five years has had several mild attacks of azoturia. During hot weather he escapes the disease. How can it be prevented? I also have another horse which is twenty years old, seemingly in good condition, but when not exercised or worked his sheath swells. What can I do for him?—P. E. D., Strobleton, Pa. When your fourteen-year-old horse is idle, don't feed him grain; feed bran, roots and roughage. Lack of exercise, feeding idle horses too much grain and breathing foul air are common causes of azoturia. This ailment is usually prevented by giving the animal daily exercise. Your old horse should have some exercise every day; also give him enough acetate of potash in drinking water to keep his kidneys active. Keep sheath clean, but don't apply liniment or irritating drugs. His bowels should be kept open, this can be accompanied with feed.

POLL EVIL.—I have a mare that has a swelling on her head just back of ears; opened it and a great amount of matter was expelled. I do not know the cause unless she had a bump of some kind. She eats good, works all right; think it must be poll evil. Is it contagious? Can she be cured?—A. T., Carroll County, Md. Slowly apply hydrogen peroxide to remove pus, then force one part iodoform and nine parts boric acid to bottom of cavity. The head should be treated once a day. Poll evil is not contagious.

NERVOUSNESS.—I have a Holstein heifer due to come fresh next month. This will be her second calf. The first time she came in was last summer, and before that time, I noticed her jerking a portion of the time. She doesn't give enough milk.—H. B., Armstrong County, Pa. Give her thirty grains of fluid extract of nux vomica at dose in drinking water twice a day.

Education of Billy

(Continued from page 17)

"Now, uncle," said Billy when the ballasting was finished, "we'll alter her sail plan a little. She's got too much headsail. We'll cut the jib, [illegible] down a little and get another reef-band in the foresail. In lying to, I think it will come in useful. After a little painting and overhauling of the rigging, she'll be ready for [illegible]—"

"Ef you kin git a gang to go in her," interrupted the uncle pessimistically.

"Don't worry. I'll get a gang."

When the Anchorville trawlers heard that young Billy Stream intended taking the Jennie Anthony out winter haddocking, there was much doubtful comment. The fishermen all liked Billy—especially after he thrashed Jack Hemsley—but to their unsophisticated ideas, Billy was a "wrong 'un" and full of the crazy notions which come to those who have been up to a college and absorbed some sort of education.

The fishermen knew the breed of old. They had listened many times to be-spectacled ichtyological professors who had lectured them on fish and fishery subjects, but because these gentlemen had never stood in the bow of a dory and hauled a trawl, they were of no account and not convincing. It is thus with fishermen the world over. They resent ideas propounded to them by men who "read them out of a book."

Billy had not visited his home since the row with his father. He had seen his mother and sister once or twice when the latter drove over to Uncle Ben's, but his parent had evinced no desire to see him. The fact of his linking up with Ben Anthony embittered the harsh old man. When the latter heard that his son was going to skipper the Jennie Anthony he laughed grimly and issued an edict, orally of course, that any man who shipped on the schooner would never get a "sight" on the Stream Company's vessels again. This was an error of judgment on Captain Stream's part. Fishermen are singularly independent and refuse to be coerced or restrained from following their inclinations.

Billy Stream found it hard work getting men. His old dory-mate, Johnny Wilson, promised to go with him, and he secured Jim Cline, a half-witted fellow, as cook. When Billy approached the Anchorville and Port Anthony trawlers about shipping with him, they laughed and refused to go. At the end of a week Billy was desperate.

There was a big political meeting held in the Anchorville Hall one night at which many fishermen were present. Just as the conclave adjourned, Billy jumped up on the platform and addressed the crowd.

"Boys," he said, "I want a gang for the Jennie Anthony. She's been overhauled and reballasted and is now a fit and able vessel for winter fishing. I'm a green skipper, I know, but I'll learn, and I'm willing to learn. Anybody that will take a chance, let him come down to Johnny Morrison's poolroom tonight and sign up. Thank you, gentlemen!"

"Anybody that goes with that young fool is crazy!" roared a voice which Billy recognized as his father's. "He's no good an' never will be any good. He's double-crossed his father and will double-cross any man that's fool enough to go with him in that crazy tub o' Ben Anthony's. What does that feller know about sailin' a vessel or ketchin' fish? Take my advice an' keep away from him, boys. Ef he don't drown ye, that crazy cook of his'll pizen ye!"

There was a general laugh at Captain Stream's indictment of his son, but Billy jumped on the platform again, flaming.

"Any man that thinks I'll double-cross him, poison him or drown him, I'll knock the stuffing out of him," he bawled defiantly. "I'll fight any man in the crowd and if I lick him he'll ship with me. Come on, now, who'll take me up?"

Some one did take Billy up. It was one of the two town policemen, who at a sign from the mayor, grabbed William and ejected him from the hall as a disturber of the peace. Billy went out quietly and strode off to Morrison's poolroom feeling angry with himself for being such a fool.

At the poolroom, Patrick Clancy sought him out. Mr. Clancy was the town's sporting promoter and owned the local skating rink.

"Looky-here, Billy," he said. "You play hockey, don't ye? Yes? Well, I've a proposition. Anchorville has always bin' licked by the Cobtown boys. Now, ef you'll play for us on Saturday and help lick that Cobtown crowd, ye'll have all the boys with ye. Fishermen are good sports and they'll ship with ye, I'm sure, ef ye help win that game."

Stream laughed. "I haven't had any practice this season; but go ahead, I'll try."

(To be continued next week)

Our Readers' Classified Advertising Department

A market place to buy or sell at little expense. Over 95,000 farm families read Pennsylvania Farmer every week. Rate 6 cents a word each for one, two or three consecutive weekly insertions; 5 cents a word each for four or more insertions. Count each number and initial and send cash with order. "Cheap" red clover seed and dangerous lubricating oils have all the "looks" of the prize-winning varieties.

Don't let "Looks"

cheat you out of Farm Profits

Pick up a handful of Italian red clover seed and examine it as closely as you like.

It can't be told from the finest Michigan variety.

The two *look* alike and *feel* alike—but right there the likeness ends. They certainly don't *grow* alike.

Thousands of acres of winter-killed Italian red clover explain why farmers this year insist on knowing the source of their clover seed and are not picking by "looks" alone.

It is just as expensive to pick oil by "looks."

The *best* and the *worst* can look identical. Your eye can't detect the difference.

But your motor can. It may not protest at first. But your engine knows when it is being cheated, and a wear-crop of repair bills is as certain as death and taxes.

Make sure of the source of your oil

Just as farmers today are going to dealers who handle certified seed, so farmers everywhere are making certain of the source of their oil. More motorists are driving up to dealers and asking for Gargoyle Mobiloil than for all other brands combined. They don't buy oil of unknown quality and uncertain origin, just because it is peddled around at the back door and offered for a few cents less. Experience has shown that cheap oil seldom means cheap lubrication, and that low-cost-per-quart usually travels with high-cost-per-mile.

Gargoyle Mobiloil is made by the foremost lubrication specialists in the world. It is sold near your farm by a dealer who wants to show you a cash-saving in your operating costs. He wants you for a steady customer. He knows that in actual performance Mobiloil will save you real money over other oils.

The Mobiloil dealer sells more than just *oil*. He gives advisory lubrication service which assures the grade, or grades, of Mobiloil best suited to your car, tractor and truck. He bases his advisory service on the Mobiloil Chart of Recommendations, which hangs on his wall. Those recommendations are the work of a group of 38 engineers who spend their entire time analyzing motors under every conceivable operating condition. Their recommendations for low-cost lubrication have received the okay of practically every automotive manufacturer in America.
